TABLES

Table

POPULATION

1. Population by sex, area and density for each part of the world: latest census, and midyear estimates for 1937 and 1954 99
2. Estimated population, area and density of the world by continents and regions: 1920, 1930, 1940, 1950 and 1954 115
3. Estimates of total population: 1920, 1925, 1930, 1935, 1940 and 1942–1955 116
4. Area, enumerated population and intercensal rates of increase: 1850–1954 128

TABLEAUX

Tableau

POPULATION

1. Population selon le sexe, superficie et densité de chaque partie du monde: dernier recensement et estimations au milieu de l'année pour 1937 et 1954 99
2. Estimations de la population, superficie et densité du monde par continents et régions géographiques principales: 1920, 1930, 1940, 1950 et 1954 115
3. Estimations de la population totale: 1920, 1925, 1930, 1935, 1940 et 1942–1955 116
4. Superficie, population dénombrée et taux d'accroissement entre recensements consécutifs: 1850–1954 128

TABLES (continued)

Table *Page*

5. Population by major civil divisions: each census, 1945–1954 151
6. Population of capital city and cities of 100 000 or more inhabitants: each census, 1945–1954 171
7. Population, urban and rural, by sex: each census, 1945–1954 185
8. Population by size of locality and sex: each census, 1945–1954 198
9. Population by size of household: each census, 1945–1954 216
10. Population by 5-year age groups and sex: each census, 1945–1954 and latest postcensal estimate:
    Part A—Enumerated population 228
    Part B—Estimated population 266
11. Population by single years of age and sex: each census, 1945–1954 274
12. Population by marital status, age and sex: each census, 1945–1954 380
13. Population by literacy, age and sex: each census, 1945–1954 436
14. Population, total and economically active, by sex: each census, 1945–1954 472
15. Population, total and economically active, by age and sex: each census, 1945–1954 479
16. Economically active population by industry, status and sex: each census, 1945–1954 510
17. Female population by age and size of family (number of children born alive): each census, 1945–1954 574
18. Female population by age and size of living family (number of children living): each census, 1945–1954 600

BIRTHS

19. Live births, 1946–1954 and crude live-birth rates, 1920–34 and 1946–1954 608
20. Live births by age of mother: latest available data . 620
21. Birth rates specific for age mother: latest available data 627
22. Live births by live-birth order: latest available data 632
23. Birth rates by live-birth order: latest available data 637

TABLEAUX (suite)

Tableau *Page*

5. Population par principales divisions administratives aux différents recensements effectués de 1945 à 1954 151
6. Population des capitales et des villes de 100 000 habitants au moins aux différents recensements effectués de 1945 à 1954 171
7. Population urbaine et population rurale selon le sexe aux différents recensements effectués de 1945 à 1954 185
8. Population selon l'importance des localités et le sexe aux différents recensements effectués de 1945 à 1954 198
9. Population selon la dimension des ménages aux différents recensements effectués de 1945 à 1954 . 216
10. Population par groupes d'âge quinquennaux et par sexe: recensements effectués de 1945 à 1954 et derniére estimation:
    Partie A—Population dénombrée 228
    Partie B—Population estimée 266
11. Population par année d'âge et par sexe aux différents recensements effectués de 1945 à 1954 274
12. Population selon l'état matrimonial, l'âge et le sexe aux différents recensements effectués de 1945 à 1954 380
13. Population selon l'analphabétisme, l'âge et le sexe aux différents recensements effectués de 1945 à 1954 436
14. Population totale et population active selon le sexe aux différents recensements effectués de 1945 à 1954 472
15. Population totale et population active selon l'âge et le sexe aux différents recensements effectués de 1945 à 1954 479
16. Population active selon la branche d'activité économique, la situation dans la profession et le sexe aux différents recensements effectués de 1945 à 1954 510
17. Population féminine selon l'âge et la dimension de la famille (nombre d'enfants nés vivants) aux différents recensements effectués de 1945 à 1954 574
18. Population féminine selon l'âge et la dimension de la famille (nombre d'enfants vivants) aux différents recensements effectués de 1945 à 1954 600

NAISSANCES

19. Naissances vivantes, 1946–1954 et taux bruts de natalité, 1920–34 et 1946–1954 608
20. Naissances vivantes selon l'âge de la mère: dernières données disponibles 620
21. Taux de natalité selon l'âge de la mère: dernières données disponibles 627
22. Naissances vivantes selon le rang: dernières données disponibles 632
23. Taux de natalité selon le rang de naissance: dernières données disponibles 637

TABLES (continued)

Special Topics of the Demographic Yearbook Series 1948-1955

Year	*Issue*	*Special Topic*
1948	First	General demography
1949-50	Second	Natality statistics
1951	Third	Mortality statistics
1952	Fourth	Population distribution
1953	Fifth	General demography
1954	Sixth	Natality statistics
1955	Seventh	Population censuses

Foreword

This 7th issue of the *Demographic Yearbook,* prepared by the Statistical Office of the United Nations, features statistics of population censuses taken between 1945 and 1954. It contains, in addition, the revised and extended regular series of demographic statistics published annually, namely estimates of population, statistics of natality, mortality, nuptiality, divorce, and life-table functions, as well as Technical Notes, a Bibliography, and Indexes.

This 1955 *Demographic Yearbook* provides a comprehensive reference volume for international population-census data relating to the decade ending 1954. About one third of the volume is devoted to new and revised distributions on world, regional, national, sub-national and city populations, urban and rural population, population distributed by size of localities, marital status, literacy, and measures of fertility. Detailed statistics on the age and sex of the population account for 152 pages, including a table on single years of age presented for the first time in the *Demographic Yearbook.* Another new table, never previously published in the *Yearbook,* shows population by size of household. Three tables, comprising over 100 pages, are devoted to economic characteristics of population.

The selection of "censuses" as the feature subject for 1955 reflects the fact that the results of the 1950-1954 population-census programme are now generally available. It is also in accord with the *Demographic Yearbook* subject-rotation programme, adopted because of the impossibility of publishing every year the entire body of new demographic data which becomes available from an increasing number of geographic areas. Previous special features have included natality, population distribution, and mortality as shown opposite.

As a source of basic data for demographers, economists, and public-health workers, the *Demographic Yearbook* should not be considered as an isolated volume adequate for all purposes. It should rather be considered as one of a co-ordinated and interrelated set of periodic publications issued by the United Nations and the specialized agencies.

In particular, the general interest of the United Nations in the broad range of demographic data and that of the World Health Organization in statistics needed for the study of health problems form the basis of the close co-operation of these agencies in the collection and publication of population, vital, and other related types of statistical data. Under the co-ordinated plans, the United Nations *Demographic Yearbook* is the central international source of demographic data for the demographer or the economist. Some of the data assembled for the *Demographic Yearbook* are reprinted in the publications of the World Health Organization so as to be in a form readily accessible to the medical and public-health professions. In addition, publications of the World Health Organization, in particular its series *Annual Epidemiological and Vital Statistics,* contain compilations of deaths by cause of death, age, and sex; special compilations of data for selected causes of death; detailed data on cases and deaths for notifiable diseases; and other data of medical interest.

Considered together, the publications of the United Nations and the World Health Organization cover the major important types of statistics on population, vital events, and health, and both sets of publications should be used when detailed figures on the full range of internationally assembled statistics on these subjects are required.

Acknowledgment is made to the United States Library of Congress which was responsible for the preparation of the Bibliography. Credit is due also to the Population Branch of the Bureau of Social Affairs of the United Nations Department of Economic and Social Affairs, for the classification of estimates by type (Table 1), for the preparation of adjusted estimates of population for continents and regions (Table 2), and for the application of the age-accuracy test mentioned in the Technical Notes (p. 19).

Sujets spéciaux des diverses éditions de l'Annuaire démographique 1948-1955

Année	*Edition*	*Sujet spécial*
1948	Première	Démographie générale
1949-50	Deuxième	Statistique de la natalité
1951	Troisième	Statistique de la mortalité
1952	Quatrième	Répartition de la population
1953	Cinquième	Démographie générale
1954	Sixième	Statistique de la natalité
1955	Septième	Recensements de population

Avant-propos

La septième édition de l'*Annuaire démographique,* préparée par le Bureau de statistique des Nations Unies, est spécialement consacrée à la publication des données fournies par les recensements de population effectués durant la décade de 1945 à 1954. Elle renferme, en outre, les séries classiques, révisées et augmentées, de statistiques démographiques annuelles, c'est-à-dire, estimations de population, données sur la natalité, la mortalité, la nuptialité et le divorce, ainsi que certaines valeurs des fonctions des tables de mortalité, des commentaires techniques sur les tableaux, une bibliographie, un index des pays et un index des sujets.

L'édition 1955 de l'*Annuaire démographique* constitue un ouvrage de référence des plus complets sur les statistiques fournies par les recensements de population qui ont eu lieu dans les divers pays pendant la décade se terminant en 1954. Un tiers environ du volume présente des chiffres de population nouveaux ou révisés sur l'ensemble du monde, les continents, les grandes régions géographiques, les différents pays et territoires, les divisions administratives principales, les grandes villes, et sur la population répartie en urbaine et rurale, selon l'importance des localités, l'état matrimonial, l'aptitude à lire et à écrire, et la fécondité. Des statistiques détaillées de la composition par âge et par sexe de la population sont publiées dans 152 pages de cette édition, qui comprennent, entre autres, un tableau de la population par année d'âge qui paraît pour la première fois dans l'*Annuaire démographique.* Un autre tableau inédit fournit des données sur la dimension des ménages. Plus de 100 pages de cet ouvrage ont été réservées à trois tableaux sur les caractéristiques économiques de la population.

On a fait une place particulière aux "recensements" dans l'édition de 1955 parce que l'on dispose à présent de presque tous les résultats des dénombrements effectués dans le cadre du programme de recensement de 1950-1954. Ce choix est également conforme au système de roulement qui a été adopté par suite de l'impossibilité de publier chaque année l'ensemble des nouvelles données démographiques disponibles dans un nombre croissant de pays et territoires. Les sujets spéciaux des éditions antérieures ont été la natalité (1949/50 et 1954), la répartition de la population (1952) et la mortalité (1951) ainsi qu'on l'a indiqué à la page précédente.

En tant que source de données de base pour les démographes, les économistes et les spécialistes de la santé publique, l'*Annuaire démographique* ne doit pas être considéré comme un ouvrage isolé susceptible de répondre à tous les besoins mais plutôt comme l'un des éléments constitutifs d'une série de publications périodiques solidaires des Nations Unies et des Institutions spécialisées.

Les intérêts voisins des Nations Unies et de l'Organisation Mondiale de la Santé ayant respectivement pour objet le domaine étendu de la démographie générale et celui plus particulier des statistiques indispensables à l'étude des problèmes sanitaires, forment la base d'une coopération étroite entre ces deux institutions pour le rassemblement et la publication des statistiques de l'état et du mouvement de la population et des données annexes. Dans le cadre d'un plan d'ensemble à l'échelle internationale l'*Annuaire démographique* de l'Organisation des Nations Unies constitue la source fondamentale d'informations sur la population pour le démographe et l'économiste. Certaines des données rassemblées pour l'*Annuaire démographique* sont réimprimées dans les publications de l'Organisation Mondiale de la Santé afin de les mettre à la portée du corps médical et des spécialistes de la santé publique. En outre, les publications de l'Organisation Mondiale de la Santé, particulièrement l'ouvrage périodique intitulé "Statistiques Epidémiologiques et Démographiques annuelles", contiennent des séries de données sur les décès par cause selon l'âge et le sexe; des séries spéciales sur les décès d'après certaines causes; des données détaillées sur les cas et décès dus aux maladies à déclaration obligatoire, et d'autres statistiques d'intérêt médical.

Ensemble, les publications des Nations Unies et de l'Organisation Mondiale de la Santé fournissent des renseignements sur les aspects les plus importants de l'état et du mouvement de la population ainsi que de la santé publique et elles doivent être utilisées concurremment si l'on désire disposer de données détaillées sur toutes les statistiques établies à cet égard par les divers pays du monde.

Le Bureau de statistique est reconnaissant à la Bibliothèque du Congrès des Etats-Unis d'avoir établi la bibliographie de cette édition. Il remercie également le Service de la population de la Direction des affaires sociales du Département des affaires économiques et des affaires sociales de l'Organisation des Nations Unies, pour le classement des estimations par type (tableau 1), pour l'établissement d'estimations rectifiées de la population des continents et des principales régions géographiques du monde (tableau 2) et pour l'application de la méthode permettant d'évaluer l'exactitude des statistiques de la composition par âge des populations exposée à la page 67 des commentaires se trouvant au début de ce volume.

CHAPTER I. *BACKGROUND TO THE 1950 CENSUSES OF POPULATION*

TRADITION AND CONCEPT OF POPULATION CENSUSES

The census of population has a long tradition, going back to the days of antiquity. Though the process was not always known as a "census," its first purpose was to supply a count of the people. Gradually, the purpose of the population census has been modified to meet the changing needs of society. Thus, the modern census has no administrative uses similar to those of the Roman census of 2000 years ago.

Whatever their history of census-taking, countries are recognizing more and more the purely statistical purpose of the process. Provisions protecting the confidentiality of the individual information furnished for the census are almost universal in census legislation. In some countries, such information cannot even be given to any other governmental agency, thus preventing its use for taxation, military conscription, police or other purposes.

As now conceived, a census of population may be defined as the total process of collecting, compiling and publishing demographic data pertaining, at a particular time, to all persons in a defined territory. The most essential characteristics of a modern census are:

(1) *Universality* — the census enumeration should include every member of the community, without omission or duplication;

(2) *Simultaneity* — all census facts should refer to one well-defined point of time;

(3) *Individual units* — a census implies that separate data are recorded for each individual (the procedure by which "totalled" or summarized data are collected for groups of individuals is not a census);

(4) *Defined territory*—the coverage of a census operation should relate to a precisely defined territory;

(5) *Compilation* — the compilation and publication of data by geographic areas and by basic demographic variables is an integral part of a census.

Periodicity is also implicit in the modern concept of a census. In fact, census data are of greater value if the counts are taken at regular intervals — at least every ten years.

It must be noted, however, that many of the enumerations carried out in different periods of population-census history, whether they were called "censuses" or not, do not always meet all the basic requirements of a modern census, given above.

MAIN USES OF POPULATION-CENSUS DATA

The uses of census data are too numerous and varied to be listed in their entirety. However, a few examples can be given. Parliamentary reapportionment for electoral purposes cannot be made without a knowledge of population distribution. The questions of unemployment, defence, migration, housing, transport and communications, the administration of justice, and so forth, cannot be studied in the absence of census data. Without a census, estimates cannot be made of the future financial requirements for the educational needs of the rising generation, or for the payment of old-age pensions. The various kinds of social-insurance schemes also depend on such census material for actuarial calculations.

Data on sex and age, marital status, educational characteristics, place of birth, legal nationality, language, economic activity, etc. have numerous uses, indicated by the fact that almost every modern census in the world includes these items. The calculation of vital-statistics rates and the construction of life tables would not be possible but for census data. The usefulness of demographic information to industry, commerce, and to economic and sociological research programmes is universally recognized. Census facts, even though not directly contributing to the solution of problems of state policy, nevertheless form a background against which these problems may be viewed.

GROWTH OF NATIONAL CENSUS ACTIVITY

The growth in population-census activity over the past century is indicated by the fact that around 1860 and 1870 only about 200 million persons were covered by census enumerations in each ten-year period. In the ten-year period starting 1880, the total had increased to over 500 million, and by 1900 to approximately 800 million. The increase continued until the total number of persons enumerated in the decade around 1930 was 1,200 million; around 1940, some 1,300 million; and around 1950, over 1,900 million.

These figures on the total number of persons enumerated are particularly affected by whether or not countries with large populations had taken censuses at the various periods. A more stable indication of progress can be obtained from the table below, which gives the number of separate sovereign countries in each continent which took censuses in each 10-year period from 1855 to 1954.

Number of Sovereign Countries taking a Population Census: Each 10-year period from 1855 to 1954

Time periods	*Total*	*Africa*	*North America*	*South America*	*Asia and Oceania*	*Europe*
1855-64	24	0	4	2	1	17
1865-74	29	0	2	5	3	19
1875-84	37	1	5	4	6	21
1885-94	35	0	6	3	6	20
1895-1904	44	2	7	5	7	23
1905-14	42	2	7	4	6	23
1915-24	48	2	9	4	11	22
1925-34	49	2	8	2	10	27
1935-44	44	3	9	6	9	17
1945-54	65	2	12	8	15	28

The number of such national censuses increased fairly regularly from 24 in the period 1855-64 to 65 in 1945-54 — the latter figure exceeding by more than one third the previous high for this 100-year period. This trend is shown graphically in the chart below.

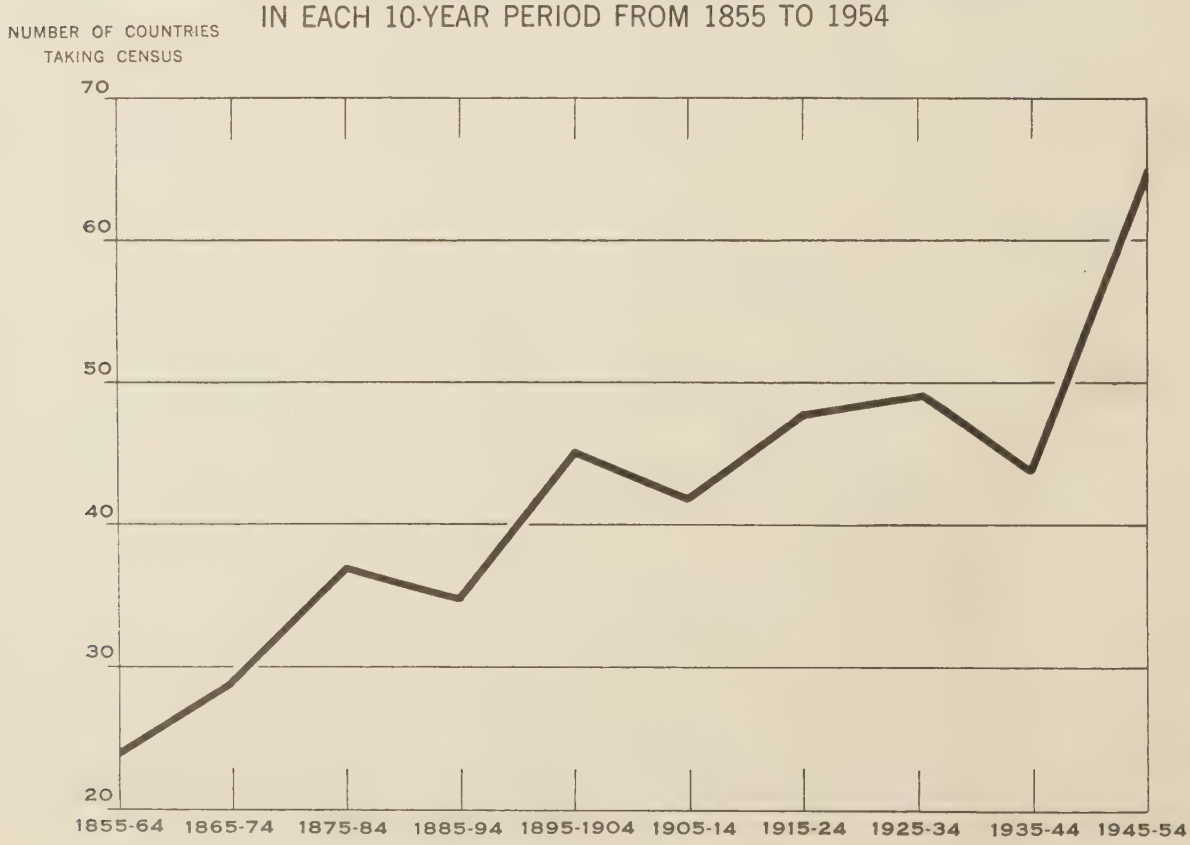
It may be noted from the chart that the period around 1940 was an unusually low period of census activity. The number of separate national censuses and the proportion of the world's population enumerated in this period would undoubtedly have been higher but for the advent of World War II, which eliminated a number of censuses in Europe and other parts of the world which otherwise might have been taken in 1940 and 1941.

In addition to reducing national census activity in 1940 and 1941, the war also had the effect of reducing the concentration of censuses in the succeeding "usual" census years, 1950 and 1951. This was due to the fact that after the war many countries felt a pressing need for current information on the distribution and characteristics of their populations and, accordingly, took censuses in 1946 and 1947 rather than waiting until 1950. This group of countries included, among others, Bulgaria (1946), France (1946), Argentina, (1947), Australia (1947), Belgium (1947), Egypt (1947), Netherlands (1947) and Thailand (1947).

Since national censuses are usually taken at 10-year intervals, census data not more than 10 years old can be considered "current" information. Therefore, while these early post-war censuses did have the effect of dispersing census activity over a broader span of years than otherwise would have been expected, they did not have the effect of reducing the total amount of relatively up-to-date demographic information available at this time for international use.

It is evident that a tremendous statistical task has been accomplished by the countries of the world. Taken collectively, the censuses since 1945 more nearly approach a "world census" than at any other similar time period in the history of the world. In pointing out this gratifying

NUMBER OF SOVEREIGN COUNTRIES TAKING POPULATION CENSUS IN EACH 10-YEAR PERIOD FROM 1855 TO 1954



increase in adherence of countries to the international recommendation that national censuses be taken, there can be no attempt to claim that the censuses have been taken primarily as a result of the interest and efforts of international agencies. Many forces, especially the sharpening recognition by governments of the value and need for various forms of statistics for the social and economic welfare of their people, have contributed to this success. Demographic statistics have shared in the truly remarkable progress of all types of statistics in various parts of the world.

ROLE OF INTERNATIONAL AGENCIES IN THE FIELD OF CENSUS-TAKING

It is clearly established that census-taking is a national responsibility. In other words, each government is responsible for either starting or continuing a policy of periodic censuses, or for deciding against it. A population census, being a mass collection of data for the whole population of a given area, requires that the government authorize it, provide the necessary funds for its various phases, set up its organization and carry out the work. Therefore, the credit for the successful taking of censuses belongs to each government in general and, more specifically, to the personnel employed for this purpose.

The history of international cooperation in the field of population censuses shows, however, that there is a useful place for the international organizations working in this field. It is not known exactly when the exchange of census knowledge started among the countries. There is evidence, though, that the First International Statistical Congress, held in Brussels in 1853, adopted a very important resolution—perhaps the first formal international recommendation on the subject—establishing basic requirements aimed at the furtherance of international comparability of population-census data and the standardization of techniques.[1] Since that time, numerous international statistical conferences and bodies, with the support and cooperation of the various governments, have been working systematically for the improvement of comparability of population-census data. Recent international effort in this field was centered around the 1950 censuses, with the active participation of the United Nations, some of its Specialized Agencies, and such regional statistical agencies as the Inter American Statistical Institute. A brief account of these activities is given below.

While much of the work of international agencies has been directed toward the problem of increasing the comparability of census data, the principal goal in recent years has been that each country should, as a minimum, take and complete some type of population enumeration. Although the ideal of simultaneous national censuses, or a "world census," has not been achieved, country adherence to this international recommendation[2] is evident, as indicated by the rapid increase of national census activity. The main role of international agencies seems to be to supplement national census activity through various forms of technical co-operation.

THE 1950 CENSUSES AND THE ACTIVITIES OF THE UNITED NATIONS

As early as 1947, various organs of the United Nations were concerning themselves with the population censuses then planned to be taken in many parts of the world in 1950 or in subsequent years. The Population Commission and the Statistical Commission of the Economic and Social Council adopted several resolutions regarding these censuses.

At its first session, convened in January and February 1947, the Statistical Commission welcomed the steps which had been taken to conduct, co-operatively, population censuses of the American nations, expressing the belief that such a project would be of great value to Member Governments in their own countries and would serve as a basis for useful conclusions in possible projects in all countries of the world.[3]

At its first session, held in February 1947, the Population Commission considered the plans for a world census of agriculture and for the 1950 census of the Americas, recognized these projects as important steps in the development of co-ordinated world-wide programmes of census-taking, and decided to encourage population censuses in other parts of the world. The Commission realized that it would not be practicable to plan for a complete world-population census in 1950, but stated its belief that much could be done to co-ordinate the national censuses scheduled for 1950 and instructed the Secretariat to encourage and assist Member States to that end.[4]

The programme of activities of the United Nations relating to the 1950 population censuses springs from the above-mentioned resolutions as well as from other actions taken between 1947 and 1951. At its fourth session, for instance, the Economic and Social Council adopted a resolution requesting "... the Secretary-General to offer advice and assistance to such Member States as are prepared to take comparable population censuses . . ."[5] As a consequence of resolutions of this type, the United Nations developed a programme of expert assistance to countries planning population censuses for 1950 or subsequent years. This programme proceeded chiefly along four major lines of activity briefly described below.

Methodological studies

From 1947 to 1949, a series of *Studies of Census Methods* was prepared co-operatively by the United Nations Secretariat, the Food and Agriculture Organization, and the International Labour Office. These studies, which were

based on an examination of the methods used by some 50 countries in their censuses taken around 1940, were later embodied in the following three major technical publications: *Population Census Methods,* Population Studies, No. 4, Lake Success, New York, 1949; *Application of International Standards to Census Data on the Economically Active Population,* Population Studies No. 9, New York, 1951; and *Handbook of Population Census Methods,* Studies in Methods, Series F No. 5, New York, June 1954. The latter publication contains the text of the recommendations for the 1950 population censuses adopted by the Population and Statistical Commissions of the United Nations, together with those formulated by the Inter American Statistical Institute for the guidance of the American nations.

Development of standards

The standards for the 1950 censuses were based on the definitions, classifications and methods used in various countries. They were developed by the Population and Statistical Commissions through a series of sessions held during the years 1947-1951. The Food and Agriculture Organization, the International Labour Office, and the Inter American Statistical Institute participated in the formulation of the final recommendations which were concerned with the items to be investigated, standard definitions, and suggestions regarding tabulation. An examination of the methods used in recent censuses shows that many countries adhered closely to these international recommendations.

Training and demonstration

Since 1948, various international group-training activities, especially designed for the 1950 censuses, have been organized. Four regional training courses in population and agricultural censuses were sponsored by the United Nations, the Food and Agriculture Organization, other international agencies, and national governments.[6] One of the important features of these training courses was the emphasis given to the practical application of census techniques, ranging from the design of the questionnaire to the planning and conducting of experimental censuses. The courses were attended by some 189 technicians and officials, most of whom subsequently had occasion to put into practice the acquired knowledge in the planning and taking of population censuses of their countries. In addition to the training centres organized primarily by the United Nations and the Food and Agriculture Organization, the Statistical Office participated in several projects for training in census-tabulation procedures and in various other conferences and seminars designed for training and demonstration purposes.

Expert advice

Another form of technical aid for the 1950 population-census programme was the provision of expert advice by the United Nations to a number of governments. At their request, countries received United Nations assistance for one or more phases of the census planning, processing or publication, while a few received expert assistance for the entire operation. The following are among those which obtained United Nations advice in connexion with their censuses of population: Bolivia, Burma, Chile, Colombia, Ecuador, Greece, Libya, Pakistan, Panama and Paraguay. This form of assistance has been acknowledged as very effective in securing population-census data, particularly in countries lacking them for long periods of time.

The population censuses taken in many parts of the world in or around 1950 are rightly regarded as the most successful achievement in census history in terms of population enumerated, number of countries participating in the programme, international co-operation, use of modern methods and techniques, development and application of international recommendations, and so forth. However, much still remains to be done to improve further the coverage, quality, comparability and availability of population-census data. Since population censuses normally constitute a decennial activity, for obvious reasons of efficiency and economy, new series of censuses should be planned well in advance. Fortunately, the United Nations has already launched a programme of activities related to the censuses of population to be taken in or around 1960. By utilizing the experience accumulated in connexion with the 1950 census programme, it is hoped that the 1960 censuses will be even more successful in terms of quality and comparability.

CHAPTER II. *TECHNICAL NOTES ON THE STATISTICAL TABLES*

SOURCE OF DATA

The series presented in the *Demographic Yearbook* are those received by the Statistical Office of the United Nations from the statistical administrations or appropriate governmental offices of the geographic units or "countries" of the world, supplemented where necessary and feasible by data from national official publications. The statistics received from Governments are transmitted on questionnaires designed for the purpose, or by correspondence.

Thus, all basic data are current official statistics. In cases where there is disagreement between these and data published previously, those appearing in this *Yearbook* may be assumed to be revisions received in the Statistical Office by 1 November 1955. To establish comparability in so far as computation procedures are concerned, all rates and ratios (except life-table functions and one or two exceptions noted in the rate tables) have been computed in the Statistical Office of the United Nations according to the method described below for each table. The populations used for the computation of rates are official censuses or estimates published in this or a previous issue of the *Yearbook*.

GEOGRAPHIC AND ETHNIC COVERAGE

In accordance with the original plan for the *Demographic Yearbook*,[1] the goal has been to make the geographic coverage of each table as extensive as possible. This means that the *Yearbook* shows in each table national-coverage statistics for as many countries and territories as provide them. However, in the absence of broader coverage, data relating to ethnic segments of populations, "registration areas," and even individual cities have also been included wherever these more limited statistics were deemed of sufficient utility and interest to warrant publication.

The absolute size of the population or vital-statistics frequencies is also a factor in determining whether data for a geographic area should be shown. No exact limit has been set, but frequency-size was effective in limiting the coverage of the more complex tables where detailed cross-classification of the characteristics resulted in zero or very small numbers in many cells. In some tables, the size of the unknown category has also been used as a criterion for admittance or exclusion of an area from the table.

In general, rate tables are somewhat more limited in coverage than tables of absolute numbers. Although no consistent criteria have been used, crude rates were usually not computed on frequencies less than 15, nor specific rates on a distribution which totalled less than 50.

An automatic limiting factor, especially effective in relation to specific-rate tables, is the necessity of having the two components of rates, that is the vital-statistics and the population figure, available for the same year and geographic area. Lack of the appropriate population component has seriously restricted the geographic coverage in Tables 21, 23, and 27 where rates specific for age and by birth order are shown.

NOMENCLATURE

The names applied to the various geographic units for which data are presented are those in current usage. Table 1—which shows the name of every major geographic statistical unit in the world — may be said to reflect the official nomenclature information available in the Statistical Office as of mid-1955.

For reasons of space and convenience, country names are generally given in their shortened form, provided these are widely recognized and commonly employed. Thus, the Republic of the Philippines is listed as the "Philippines," the United States of Brazil as "Brazil," the United States of America as "United States," the Hashemite Kingdom of the Jordan as "Jordan," and the United King of Great Britain and Northern Ireland as the "United Kingdom." For the same reason, the Federal Republic of Germany and the Democratic Republic of Germany are listed in all but Table 1 as Western and Eastern Germany, respectively. Table 1 carries the full name and composition of each sector.

Name changes which have come to the attention of the Statistical Office since the previous issue of the *Yearbook* are included. For example, the Federation of Nigeria, which was established 1 October 1954, is now shown under its new name accompanied, where possible, by its component regions and divisions. Northern Rhodesia, Southern Rhodesia, and Nyasaland appear indented under the Federation of Rhodesia and Nyasaland. Spanish West Africa now appears sub-divided into Ifni, Northern Zone, Rio de Oro, and Saguia el Hamra. The Southern Zone of Spanish Morocco is included in the Northern Zone of Spanish West Africa.

It will be noted that two geographic areas previously shown as separate entities no longer appear in that form. These are the Free Territory of Trieste, which was incorporated into Italy and Yugoslavia as of October 1954, and French India, the four remaining settlements of which came under the administration of India on 1 November 1954.

ARRANGEMENT OF COUNTRY NAMES

The arrangement of the country names in the stubs or boxheads of the tables is that initiated in the previous

[1] United Nations. *Report of the Population Commission* (second session). United Nations document E/571, annex A, p. 11.

(1954) issue. Table 1 continues to show, for each continent separately (beginning with Africa and proceeding in English alphabetic order), all of the major geographic units of the world arranged also in English alphabetic order within broad administrative-status groups; Table 2 shows continents and regions only; Tables 3-32 show those geographic units for which statistics are available, arranged in English alphabetic order within continents. Names of sovereign states appear alone; initials identifying the kingdom, commonwealth, union, republic, or other administering authority are placed in brackets following the name of overseas states, territories, colonies, protectorates and dependencies.

It should be emphasized that the form of presentation in these tables does not imply official endorsement or acceptance by the United Nations of the status or boundaries of the territories as listed or described. It was adopted solely for the purpose of providing a convenient geographic basis for the accompanying statistical series. The same qualification applies to all notes and explanations concerning the geographic units for which data are presented.

SCOPE OF DATA

As a general rule, the statistics set forth in the *Demographic Yearbook* are for the territory within the "present" (1955) boundaries of the geographic unit specified. Whenever the territory to which data relate is other than present, footnotes have been used to describe the way in which the geographic constitution of the reporting area differed from the present one. Where a comprehensive definition of the statistics appears to depend on clarification of "present territory", a brief description of salient points has been set forth in Table 1.

One exception to this footnoting policy has been introduced whenever data are for the year in which the latest boundary change occurred. In such cases, explanatory footnotes have been included for clarification, even though the coverage conforms to "present territory."

In collecting national statistics for publication, the aim has been to assemble data for the present-in-area or *de facto* population, rather than for the habitually resident or *de jure* population. Thus, unless otherwise noted, the series include data for jungle tribes, aborigines, nomadic peoples, displaced persons, internees, and refugees.

The outstanding exception to this policy has been made in the case of population figures. When the required statistics were available, the present-in-area populations have been adjusted or "modified" to include armed forces stationed outside the country in question, and to exclude alien armed forces and enemy prisoners of war located in the country.[2] Such adjustments are noted in the tables both where the population figures are shown and, if applicable, where they are used in the computation of vital-statistics rates.

EVALUATION OF QUALITY OF DATA

Known variations in definitions and methods of computation are, as usual, set forth in footnotes to each table. The implications of the qualifications, as well as technical sources of error and misinterpretation, are explained in the text beginning below.

As in previous *Yearbooks,* the latest official estimate of population (in this case, that for 1954) has been classified by type, and current vital statistics have been evaluated for "completeness," both of which classifications will be described in detail in the appropriate section below. Because of format limitations, the code applied to distinguish one type of population estimate from another appears only in connexion with Table 1; that which qualifies the vital statistics appears only in the trend tables of live birth, death, infant mortality, marriage, and divorce (Tables 19, 25, 28, 30, and 31). Despite the fact that the qualifying codes for the six types of statistics are appended in each case to one table only, it should be emphasized that they are equally applicable to corresponding data for the same years in all other tables. Therefore, in using statistics from any table, reference should be made to the "evaluation" shown on the corresponding trend table. To facilitate this, the identity of the reference table is given in the headnote.

Another qualifying index, re-introduced in the 1953 *Yearbook,* has been continued. This is a dagger (†) used to distinguish those statistics which have been tabulated according to the year of registration of the vital event concerned, rather than by the year of its occurrence. The importance of this qualification, especially in evaluating tabulated live births, cannot be overemphasized. A detailed exposition of the implications of this factor will be found on p. 30 below.

DISCREPANCIES AMONG TABLES

In preparing the tables for publication, occasional disparities were found in the statistics dealing with different characteristics for the same area and year. Although most of these were corrected or reconciled by consulting published sources, or through correspondence with the Governments concerned, a few unresolved differences still remain. These are noted in the tables wherever they appear.

[2] See p. 7 for origin of this policy.

PART A — AREA AND POPULATION

AREA

Data on geographic area will be found in Tables 1, 2, and 4 of this issue. Table 1 shows the most recent "area" value for every geographic unit of the world, Table 2 shows an aggregate area for continents and regions, and Table 4, historical trends of the areas in which censuses of population have been taken since 1850.

All of these area figures are reported as "total," that is, they are the sum of the land area and inland waters, excepting polar regions and uninhabited islands.

SOURCES OF VARIATION

The concept of "inland water" varies from country to country, but generally includes major rivers and lakes. It is known, however, that some countries include also the area of coastal bays, inlets, and gulfs. Another problem concerns the accuracy of the area value given. Some area figures are based on recent surveys, carried out by approved scientific means; others are simply conjectures based on random items of information. Some values are of current origin, reflecting all significant boundary changes up to the present time; others are not so recent and may thereby fail to take cognizance of certain boundary rectifications. Since neither the exact method of determining each area nor the precise definition of its composition and time reference is known for all areas, the values should not be considered strictly comparable from country to country.

Apparent inconsistency with previously published estimates may be due to the introduction of revised estimates, to actual changes in land surface, or to variation in the original unit of measure used. In this *Yearbook,* area is given in square kilometres, the conversion from square miles (if required) having been accomplished by the use of the formula 1 square mile = 2.589998 square kilometres. Use of a different factor would give slightly different results. Rounding also may affect the last digit of the value.

POPULATION

This seventh issue of the *Demographic Yearbook* is devoted primarily to population-census data. Of the 32 tables included, 17 contain information from population censuses taken between 1945 and 1954, while 3 include estimates of population for these and other years.

Certain types of variation will be seen in the data. National classification schemes are not always the standard one used in the tables; definitions and concepts of various characteristics differ from country to country. This type of variation will be indicated on the tables whenever possible and discussed in connexion with specific distributions. There are other more fundamental sources of variation, however, which are common to all population data. These are discussed below in terms of their effect on general comparability. They include the problems of obtaining comparability in the composition of the total population of an area, the lack of comparability due to underenumeration and omissions, and the difficulties of evaluating the reliability of population estimates.

SOURCES OF VARIATION

1. Definition of "total" population

Variation in the coverage of the population totals for different countries is one of the most important factors to be considered in evaluating comparability.

The population data of a country are conventionally described as *de facto* or *de jure*. A true *de facto* or present-in-area concept usually implies that all persons present in the country, nationals or aliens, would be counted in the area where they were physically present at the time of the census. The *de jure* count, in contrast, includes all persons who usually reside in the area, irrespective of where they might be at the time of the census. Simple as these concepts appear, it is known that strict adherence to either of them is rarely found. Moreover, these terms used to describe with precision the method of obtaining sub-national totals, are often incorrect when applied to the national figure. Finally, the terms may correctly describe the method of enumeration, i.e., in place of residence versus place of occurrence, but be incorrect when used indiscriminately to describe the tabulation.

The wide variation which exists in the composition of national census data labelled *de facto* or *de jure* can be seen from Table A, p. 8, which shows how certain selected groups of the population have been treated in recent censuses of 52 sovereign countries.

Table A makes clear that in addition to the main body of residents or persons present in the area, at least 13 other categories of population may need to be considered in defining a population precisely. These special categories include nomadic tribes; aborigines; armed forces, national and alien, within and outside a country; merchant seamen in port, ashore, or at sea; alien displaced persons and enemy prisoners of war within a country; diplomatic personnel and other civilians abroad; foreign diplomatic personnel within the country and other civilian aliens permanently and temporarily within the country.

It is also evident that the degree of comparability cannot be ascertained even from an analysis of definitions such as these. The most important deficiency is that information is not available for all countries; even for those where it is available, the various meanings attached to the different groups cannot be fully determined.

The concept of *de jure* and *de facto* is even more difficult to determine in the case of populations subject to periodic migrations, as for example those in Africa. Many adult males in these population groups work in neighbouring countries and territories. Such persons are away from their tribal homes for several years at a time, leaving their families in their permanent place of residence. The *de jure* residence in this case becomes in truth the legal place of abode rather than the place of usual residence.

It seems evident that the terms *de facto* and *de jure,* though traditionally accepted, fail to convey a clear understanding of the basic population composition. Because the terms are loosely used, they have almost lost international comparability. Nevertheless, they are the terms encountered in connexion with national statistics and, as such, must be considered in using population data from different countries.

In an effort to increase comparability, the Population Commission,[1] in planning for the censuses to be taken around 1950, recommended:

> . . . that data for the total population in the country as a whole at the time of the census (with the exceptions of military and diplomatic personnel) be obtained in addition to any data on a *de jure* or other basis which may be desired for national purposes . . . that foreign military and diplomatic personnel located in the country should be excluded from the total population, and that military and diplomatic personnel of the given country located abroad should be included.

[1] Report of the Population Commission (Third Session), document E/805. Report of the Population Commission (Fourth Session), document E/1313.

TABLE A. CENSUS TREATMENT OF THE TOTAL POPULATION IN 52 COUNTRIES, 1945-1954

Explanation of symbols: DJ: *De jure* IN: Included in the enumeration – Not applicable
DF: *De facto* EX: Excluded from the enumeration ... Information not available

[1] Separately tabulated.

[2] Indians living in a civilized or semi-civilized state were enumerated but Indian jungle population was not included in the enumeration.

[3] Non-resident shipping and service population were not included in the enumeration.

[4] Part of the tribal areas of Assam was not included in the enumeration.

[5] Included in tabulated *de jure* total but excluded from *de facto* total.

[6] Included in tabulated *de facto* total but excluded from *de jure* total.

[7] Persons missing for a long period of time, such as prisoners of war, were enumerated as absentees.

[8] Navy crews and civilian passengers in ships at sea or in foreign ports were enumerated.

[9] Persons on vessels engaged in a coastwise or fishing voyage which returned to port within three weeks after the census date without proceeding from a port outside the British Isles were included in the enumeration.

[10] Civilized and semi-civilized aborigines were enumerated but information concerning the enumeration of aborigines living in a wild state is not available.

In accord with this recommendation, the population figures shown in this *Yearbook*—both census and estimate—are described as modified present-in-area counts. This means that in so far as possible, they are thought to include data for jungle tribes, aborigines, nomadic peoples, displaced persons, refugees, and national armed forces stationed outside the territory, and exclude alien armed forces and enemy prisoners of war stationed inside the country.

Although it is evident that strict comparability is not obtained, still it must be emphasized that despite national peculiarities, the modified *de facto* population described above and the true *de jure* figure do not actually differ greatly from one another. Since it is based on "usual residence," the *de jure* count ordinarily includes armed forces abroad and excludes alien armed forces in the country; consequently, figures noted in the tables as *"de jure"* may be assumed to do so unless otherwise indicated. The chief difference between a modified *de facto* figure and a *de jure* figure is that the former includes all civilians in the country at a stated time without reference to legal or habitual residence, while the latter includes civilian residents abroad and excludes civilian non-residents in the country. Because of variations in the definition of "resident", the comparability of national *de jure* totals is somewhat less than that of national *de facto* totals. However, it should be added that, under ordinary circumstances, the difference between the two is relatively small.[2]

2. Completeness of data

Irrespective of whether the census is described as a modified *de facto* or a *de jure* operation, the obtaining of a complete yet unduplicated count of the population of any area presents numerous difficulties. Although they are exaggerated in those censuses carried out in areas where the population is unfamiliar with the process of census-taking, these difficulties are present in every enumeration. Even in countries which have had a long census history, omissions and duplications can be anticipated. Omissions may occur in respect of newborn babies who have not yet been integrated into the family unit, among transients whose place of abode is not settled, or among tribal or nomadic peoples who do not live under the conventional administration of the area. Duplication may also occur among the transient population who may be enumerated in two different places. Sometimes these two factors tend to cancel each other, but usually the omissions result in a sizable underenumeration.

The magnitude of the under- or over-enumeration is not known for most countries, but in connexion with the recent (1950) censuses, there has been a marked increase in the number of countries able to estimate the amount of omissions, or conversely the completeness of the count. These countries often supplement this information with an estimate of omissions among certain groups—for example, aborigines—for whom no attempt at enumeration was made.

[2] For a more detailed discussion of *de jure* and *de facto* concepts, see *Population Census Methods,* United Nations, Department of Social Affairs, Population Division, and Department of Economic Affairs, Statistical Office, document ST/SOA/Series A, Population Studies No. 4, Lake Success, New York, November 1949, p. 6-13.

The efforts to measure underenumeration have been largely in the form of re-counts, that is, an independent verification carried out by surveying a sample of the population and searching the original schedules to determine whether these persons were enumerated in the original count. Such sample surveys can provide an estimate of underenumeration which is often used for the entire country.

Another method of estimating the size of the underenumeration consists in applying registration statistics to the last previous census returns to test the accuracy of the newly enumerated total, or by comparison of returns with population registers. Estimates of the size of isolated population groups purposely omitted from the census are often obtained from the reports of missionaries and traders, from hut counts, and so forth.

Whenever measurements of the underenumeration have been obtained, it is possible to "correct" the total enumerated figure, but it is usually impossible to correct the distributions, except perhaps the geographic. The principal use of such measures is to point up the lack of completeness inherent in even the most carefully planned and executed census and to stimulate precision. To avoid misinterpretation of data from the various tables of the *Yearbook,* care has been taken to describe the figures precisely, e.g., "actually enumerated" or "adjusted", and to give the correction factor.

3. Reliability of estimates

The reliability of an estimate depends on the nature and quality of the statistics employed in its construction and the method by which these statistics are combined. An analysis of the method of population estimation, e.g., based on census returns or derived from other data, has provided a fairly precise evaluation code for 1954 estimates. The code is set forth only in Table 1, but it can be applied to 1954 total estimates appearing in Tables 2, 3, and 10.

Quality Code

The classification of post-war estimates of population by type of estimate was introduced in the 1949-50 issue of the *Yearbook* and has been systematically modified since that time in accordance with new information. The code used in this issue is similar to that used previously, but it has been revised to give weight to the fact that many countries had censuses around 1950, and also to eliminate some of the less relevant factors heretofore taken into account. Thus, in the case of censuses, recency is the prime consideration if adjustments to current dates are based on vital statistics and migration data; both recency and frequency are taken into account if the method of adjustment is mathematical extrapolation.

The code consists of two parts. The first part, represented by a letter, indicates the nature of the base data, according to the following scheme:

R. Continuous population registers.

A. Census enumerations, the last having been made since 1 January 1950.

B. Census enumerations, the last having been made between 1 January 1945 and 1 January 1950.

C. Census enumerations, the last having been made prior to 1 January 1945.

D. Non-censal counts or partial censuses.

E. Conjectural estimates derived by other means than counting.

The second part of the code, represented by a numeral 1 to 8, indicates the method utilized for adjusting the base data to later dates and the general quality of the data used in the adjustment. Where the base data on population size are supplied each year, as is generally the case with a continuous population register, no adjustment is required, and the second part of the code is shown as "0". Where the adjustment is made by the "balancing equation" method, i.e., utilizing statistics of births, deaths, immigration and emigration, the adequacy of the statistics is indicated. Where mathematical interpolation or extrapolation is the method of adjustment, estimates based on 3 or more censuses are contrasted with those based on fewer. The four general types of time adjustment are classified for quality as follows:

0 None, base data being secured annually and requiring no time adjustment.

1 Substantially accurate statistics of births and deaths, and (where relevant) comprehensive migration statistics.

2 Substantially accurate statistics of births and deaths; doubtful or deficient data on migratory movements, or no account taken of such movements.

3 Birth and death statistics of undetermined reliability (adequacy of migration data is disregarded).

4 Birth and death statistics which are stated to be deficient (adequacy of migration data is disregarded).

5 Mathematical extrapolation (or interpolation), at least three censuses having been taken since 1900.

6 Mathematical extrapolation (or interpolation), less than three censuses having been taken since 1900.

7 Assumed rates of increase not derived by mathematical extrapolation.

8 None, base figure being held constant.

. . Method of adjustment not ascertained.

Alphabetic part: The arrangement of letters and numerals in the classification scheme follows, in general, a descending scale of reliability.

The code "R0" indicates that the estimates were obtained directly from a continuous population register and that they may be regarded as of the first order of reliability. For present purposes, a continuous population register is defined as a registration system which maintains an individual file for each person in the population, a record being added for each birth, a record being removed for each death, and provision being made for the transfer of records with changes of residence. In so far as a figure for the total population can be obtained directly from such records each year, the accuracy of estimates so obtained is relatively independent of the periodicity or recency of population censuses or of the compilation of birth and death statistics from another source. Generally speaking, continuous registers lead to estimates which are superior to those derived from censuses, whereas other non-censal counting methods lead to less reliable estimates.

Estimates based on census enumerations are coded "A", "B", or "C", according to the date of the last census, as indicated above. No qualitative distinction among censuses has been attempted, but it should be understood that not all censuses are of comparable accuracy.

Estimates based on non-censal counts or partial censuses are coded "D". This category covers a fairly wide range of types, including ration registrations, tax lists, hut counts, partial enumerations and group enumerations such as are made in a number of African areas where the household, tribe, or village serves as the unit for counting. The accuracy of these counts varies considerably, but as a group they may be regarded as yielding results inferior to those generally obtained by the census method of individual enumeration. In the case of annual counts (coded "D0"), the yearly repetition of the operation is likely to lead to improved accuracy.

Estimates based on conjectures or guesses as to population size made at some time in the past are coded "E". Such estimates should be regarded merely as rough indications of probable population size.

Numerical part: The numerical part of the code distinguishes three types of time adjustment. The first type, adjustment on the basis of statistics of births, deaths, and migration, is coded "1" if the data are held by official and other reliable sources to be substantially accurate, "2" if the components of natural increase are substantially adequate but the adjustment for migration either is not made or is based on inadequate information, "3" if the birth and death data are of unknown reliability, and "4" if they are known to be deficient. In the case of "3" or "4", the quality of the migration data is disregarded.

The second type, mathematical interpolation or extrapolation of two or more population counts, is on the whole an inferior method as compared with the first type, except in cases where vital statistics or migration data are deficient. The type of curve selected and the length of the intercensal or postcensal interval also have some bearing on the accuracy of the estimates obtained. Since the availability of more than two census counts gives more information on past trends in population growth and more latitude in the choice of curves, a distinction is made between countries having had at least three censuses since 1900 (coded "5") and those having had less than three (coded "6").

The third type of adjustment, an assumed rate of increase not derived by mathematical interpolation or extrapolation, is coded "7". Estimates obtained in this way may contain large errors, especially if the process is continued over a long period of time. However, this is a method that, in general, is applied only in cases where neither the base data nor available information on population change permit the use of a more reliable method.

An estimate held constant at the value for the base date (coded "8") is usually of the lowest order of reliability. It often represents lack of information both as to population size and as to rates of change.[3]

[3] For a more detailed discussion of the elements of the code, see *Methods of Estimating Total Population for Current Dates*, Manual I of Manuals on methods of estimating population. United Nations. Department of Social Affairs. Population Division, document ST/SOA/Series A, Population Studies No. 10, New York 1952. 45 p.

Reliability of code: The various combinations of letters and numerals do not lend themselves to a precise gradation from the most reliable to the least reliable. This is so not only because of the factors mentioned in the preceding paragraphs, but also because a given set of estimates may have a favourable position with respect to one part of the code and a less favourable position with respect to the other part. It is difficult, if not impossible, to rank such cases on a reliability scale. However, it may be stated with some certainty that combinations of "R", "A" and "B" with "0", "1" and "2" indicate a relatively high level of reliability, that combinations of letters and numerals at the lower end of the scale indicate a low level of reliability, and that other combinations represent a rather wide variation in levels of reliability.

Applicability of code: Although the code appears in Table I only, it refers to the estimates for 1954 wherever they appear. For countries with a regular history of census-taking, it is probably safe to assume that the classification given applies also throughout the post-war series 1947-1954. But for the many areas in which the first census in many years was taken recently, the code is applicable only to the post-censal estimates.

DESCRIPTION OF TABLES

1. Geographic distribution

Table 1

This, the first table in the *Yearbook,* has been redesigned for presentation in this issue. It still presents total population, area and density for every statistical reporting area of the world, but it now shows the sex classification for the latest official census results and, although it includes the usual 1937 estimate adjusted to present geographic boundaries, the three post-war estimates shown in previous issues are replaced by one, namely that for 1954 or the most recent year available. The area of the country within present boundaries is given, together with the population density per square kilometre of area.

Table 1 is the only table in the *Yearbook* which shows geographic units classified according to their administrative status, i.e., sovereign countries, territories, colonies, protectorates, dependencies, condominiums, or those under international or military government. In so far as possible, the designations reflect the situation as of mid-1955. However, when a revision of status would entail an inter-continental shift, as for example the incorporation of Greenland as a Department of Denmark, the change has been described in a footnote without revision of arrangement. This administrative classification, together with the extensive footnotes which describe the boundaries of the areas in detail not found elsewhere in the *Yearbook,* makes this the reference table of the volume in respect to territorial composition.

Unless otherwise indicated, data relate to the modified present-in-area population as described on p. 9. In so far as possible, the figures presented in the census columns of Table 1 are confined to the population actually enumerated in these areas at the most recent "true" census whether this enumeration had complete or partial geographic coverage or pertained only to a segment of the population, and irrespective of the degree of underenumeration. Official estimates for excluded groups and for underenumeration are shown in footnotes when known; the results of re-counts which were considered as part of the original enumeration are not shown.

In general, a "true" census has been understood to mean one conducted with individual or family schedules, although a few "group" censuses have been included when it is known that these have been conducted on a scientific basis. The inclusion of all "true" censuses, whether national in scope or limited to some segment of the population, provides in Table 1 a survey of census-taking activity throughout the world. It makes it possible to identify at a glance the countries which have never carried out any type of true census, those which have attempted censuses of limited scope in terms of persons covered, and those which have taken a true national census.

Estimates in general refer to the midyear, i.e., to the population at 1 July of the relevant year. However, in the absence of a midyear estimate, a mean of two successive end-year (31 December) estimates may have been used. No distinction is made between these two types of midyear estimates on the assumption that the difference involved is negligible. When an estimate was not available but a census figure for the same year was, the latter is shown in the estimates column, but in italics to distinguish it from the midyear estimate.

In a few cases where neither an enumerated population nor an official estimate was available, unofficial population estimates have been shown for 1937 and 1954 in order to provide the most extensive geographic coverage and some idea of the current size of the population in every area. Such unofficial estimates are identified in the table by the symbol (x).

The area figures, given in square kilometres, relate to the total area of the specified geographic units, including inland water as well as such uninhabited or uninhabitable stretches of land as may lie within their boundaries. Wholly uninhabited areas, such as the polar regions and a few small islands, are not listed in the table and are, of course, excluded from the statistics. Area estimates are official unless marked with the symbol "x." Areas reported in square miles have been converted to square kilometres using the factor 2.589998.

Coverage: The stub of Table 1 includes 267 identifiable geographic units, which together give continental and world totals. It is, therefore, the most complete of any table in the *Yearbook.*

In so far as possible, an attempt is made in this table to show the component parts of every "group" or collective area. As in the 1954 issue, the component geographic units are here distinguished by being set in smaller-type size. Where it is not feasible or convenient to show the components separately, footnotes explain the inclusions.

Computation of density: Density is the number of persons in the 1954 total population per square kilometre of total area. It has been computed for every geographic area for which the two components of the index were available. In the absence of a 1954 population estimate, that shown in the 1954 column was used. Since the relative magnitude of the density is normally not sensitive to small changes in the size of the population, substitution of a 1953 for a 1954 estimate will not invalidate the results. Density values are in any case no more than rough indices, inasmuch as

they do not take account of the distribution or concentration of population within selected areas.

Limitations: The population data given in this table are subject to the limitations of population statistics in general, namely variations in enumeration definitions and tabulation methods, completeness of the basic count, and differences in the method of constructing estimates—all of which were discussed above on p. 7.

Reference may be made to Table A, p. 8, for guidance in interpreting the terms *de facto* and *de jure* in relation to data in this table; the degree of underenumeration of the census population is indicated on Table 1 when known; the reliability of the estimates may be ascertained by reference to the "Type of Estimate" code, which also has been described above and which is included in this table. The Code is applicable to the official estimate for 1954 unless there is specific limitation shown in a footnote. Together with information on underenumeration, it furnishes the basis for fairly precise evaluation of the 1954 estimates of total population wherever they appear. An explanation of the components of the code is given at the end of the table as well as on p. 9.

The comparability of area figures is limited by all the factors set forth on p. 7 above. Major differences between the area figures in this volume and those shown in the corresponding table of the last issue of the *Yearbook* are usually the result of re-measurement and improved estimates, though in a few cases, actual changes in land surface have been effected through land recovery and construction. Other minor differences may be due to the fact that conversion from square miles to square kilometres, in this volume, has been standardized on 1 square mile = 2.589998 square kilometres.

Table 2

This table presents estimates of world population by continental divisions and regions at decennial intervals 1920 to 1950 and at 1954, together with the 1954 area in square kilometres and the number of persons per square kilometre. An approximate indication of the reliability of the population estimates, in terms of possible percentage errors,is provided with reference to figures for 1954; it can be presumed that estimates for earlier years are, in most instances, subject to a similar range of possible errors.

Coverage: The regions have been delineated in terms of present *de facto* boundaries and all retrospective figures, having been adjusted for boundary changes, refer to constant areas. The 14 regions for which data are shown are constituted as follows:

(1) *Northern Africa:* Spanish West Africa, Spanish Possessions in North Africa, Morocco, Tangier, Algeria, Tunisia, Libya, Egypt, the Sudan, Eritrea, Ethiopia, the Somalilands.

(2) *Tropical and Southern Africa:* the remainder of Africa.

(3) *Northern America:* Alaska, Bermuda, Canada, United States, St. Pierre and Miquelon, Greenland.

(4) *Middle America:* the remainder of North America including the Caribbean.

(5) *South America:* the entire continent.

(6) *South West Asia:* Turkey, Iran, Iraq, Syria, Lebanon, Israel, Jordan, Cyprus, the Arabian Peninsula.

(7) *South Central Asia:* Afghanistan, Pakistan, India, Nepal, Bhutan, Ceylon, Maldive Islands.

(8) *South East Asia:* Burma, Thailand, Indochina, Malayan Peninsula, Philippines, Indonesia and other islands southeast of the mainland.

(9) *East Asia:* the remainder of Asia, except the Asiatic part of the USSR.

(10) *Northern and Western Europe:* Denmark, Finland, Sweden, Norway, Iceland, United Kingdom, Republic of Ireland, Channel Islands, Isle of Man, Benelux countries, France, Monaco.

(11) *Central Europe:* Germany, the Saar, Switzerland, Austria, Liechtenstein, Czechoslovakia, Poland, Hungary.

(12) *Southern Europe:* the remainder of Europe, except the European parts of the USSR and Turkey.

(13) *Oceania.*

(14) *USSR:* The Union of Soviet Socialist Republics.

Limitations: The present table maintains unchanged the estimates for all countries and regions for the years 1920 to 1950, with the exception of a new series of figures relating to the population of the Chinese Mainland. In 1953, a new population figure was announced for the Mainland — a figure which exceeds the 1948 population estimate by more than 100 million. To take account of this new figure which, while relating to 1953, is used also for 1954, revisions were carried out in the regional, continental, and world totals for 1920-1950. The 1954 aggregates also reflect the new estimate.

Because of the uncertainty of knowledge with respect to many segments of the world's population, it was felt necessary to indicate the percentage range of error around each estimate for 1954, within which the actual numbers probably fall. Possible errors in the estimate for each country were compounded in part on the assumption that since the errors in the estimates for each country are not entirely unrelated, they tend to be compensated in the regional totals. They were similarly compounded for continental totals and the world total. The results were expressed as percentages relating to the figures for 1954, rounded to the nearest of the digits, 1, 2, or 5. Because of its large size, the possible error in the estimate for China may contribute substantially to the possible error in the total for Asia, and even in the estimated total world population.

It should be noted that in developing the estimates for this table, an allowance for under- or over-enumeration at various censuses has been included wherever possible. The regional and continental sub-totals do not, therefore, necessarily coincide with those which would result from summing the component parts in Table 1 although, in each case, the sub-totals from Table 1 fall within the range of possible error shown in Table 2.

The regional, continental, and world totals for the area in square kilometres were obtained by summing the figures for individual geographic units shown in Table 1; they, therefore, include inland waters but exclude certain

polar regions and a few uninhabited islands. In interpreting the figures of average population densities, note should be taken of the fact that most of the regions include large areas of land that are only barely habitable.

Table 3

Official estimates of total population for 1920, 1925, 1930, 1935, 1940 and each year 1942-1955 are presented in Table 3. All figures are given in thousands, those reported in units having been rounded in the Statistical Office, using the digit five (5) in the hundreds place as the criterion for upward adjustment.

Unless otherwise indicated, all estimates relate to the modified present-in-area population within present geographic boundaries (see p. 6) at the midpoint (1 July) of the specified calendar year. In cases where official estimates were available for 31 December only, the arithmetic mean of two consecutive end-of-year estimates was computed and presented in this table as the midyear estimate. In some previous issues of the *Yearbook,* estimates for 1 July were distinguished from means by notations in the table. This distinction is not made in the present table on the assumption that the difference involved is negligible. In a few cases, where official estimates are regularly prepared for a date other than 1 July or 31 December, the official figures are given in the table with a note indicating the date to which they refer. For years in which the results of a current enumeration as well as an estimate were available, the census figure has sometimes been preferred to a midyear estimate, regardless of the census date, if the two figures appeared not to be in sufficient agreement. Census returns have also been included when there was no corresponding estimate for the year in question. Wherever census counts are shown in the table, they appear in italics for easy identification.

Coverage: This table with 186 geographic areas is one of the most comprehensive available in the *Yearbook*. Major countries are included even if the recent span of years for which estimates are available is short. However, smaller areas are excluded unless the period of years is relatively extensive. Likewise, the policy of the table is to show total population in so far as possible, rather than sub-national segments, although population series required for vital statistics rate computation are normally included, irrespective of the scope of the statistics.

Limitations: Comparability of population estimates is limited by the factors set forth above, namely by the variation in the meaning attached to the terms *de jure* and *de facto* in defining the total count, by the accuracy of the census on which the estimates are based, and by the method of their construction.

As pointed out in the general notes above (p. 9), the code used to describe the method of construction and hence the relative quality of the 1954 estimates is not strictly applicable to estimates other than those for that year. Nevertheless, it should be remembered that countries tend to maintain the same procedures, and it may be assumed that estimates for previous years were not more accurate than those for 1954.

Intercensal estimates are usually reviewed when the results of a new census become available. Failure to do so results in lack of comparability in the series. However, in a number of cases where the results of censuses taken since 1950 are only recently available or are still in a preliminary stage, intercensal estimates have not yet been revised and brought into agreement with the new population counts. In some of these series, the need for revision is obvious; in others, only minor fluctuations are evident in the unrevised data. Series which show an irregularity of this type are marked with a section mark (§).

Table 4

This table presents, for 198 geographic areas which have had one or more censuses since 1850, the dates of such enumerations, the total modified *de facto* population enumerated at each census *within the boundaries of the present geographic area,* the corresponding total area in square kilometres, and the average annual per cent rate of population change during intercensal periods. As in Table 1, geographic deviations from the present area are indicated in footnotes, as are estimates for excluded groups of population or underenumeration, so far as they are known.

Data in Table 4 relate to the modified *de facto* population. The area figures, which are the latest available, in some cases differ from those shown previously because of revisions, new measurements, and re-computation of the conversion from square miles to square kilometres.

For countries where it was impossible to trace the present area backwards in time to 1850 and for those in which extensive changes had taken place, a changing-area series is shown either as a substitute or as an additional series. For these geographic areas, therefore, the footnotes give a fairly complete account of the territorial modifications that occurred during the period covered by the statistics, as well as the approximate number of persons affected by the changes. The information given is more complete for censuses taken since 1900 than for those taken in earlier years.

More than one series is also shown when two types of population, i.e., modified *de facto* and *de jure,* are both available for all or part of the time period. The inclusion of the additional series was considered of value in view of the interest in comparing the two types of statistics over time.

In all cases, consistent series of area and population can be identified by the absence of horizontal rules, which have been used to indicate any break in the comparability of the data. Under this system, a rule and a space extending through the stub of the table indicate an additional time series; a rule alone extending through the "area" column indicates a change in the geographic area covered by the censuses within the same time series; a rule extending only through the population column indicates a change in the type of population enumerated, i.e., *de jure* versus *de facto.* Area changes indicated by the rule are consistently explained, except for certain of those in Venezuela and Japan.

Where the census was national, and area and population at successive censuses considered sufficiently comparable, annual average per cent rates of change between censuses were computed. Unusually high rates of increase or decrease are explained in footnotes wherever an explanation, direct or indirect, could be determined. However, a

number of extreme rates still remain unnoted. Some of these are no doubt attributable in large part to differences in completeness of enumeration, while others are the result of the concentration of armed forces or other special population groups.

Coverage: Table 4 includes 198 geographic areas, all those which have taken one or more true censuses between 1850 and 1954, the definition of "true" census being that given for Table 1. Not all of these censuses were national. Sub-national counts which were true censuses are also shown in order to provide a history of census-taking activity for the century.

Per cent computation: Annual average per cent rates of change are the average geometric rates of increase or decrease between two successive census returns, computed using the following formula:

$P_1 = P_0 (1 + r)^t$, where

P_0 is the population at the beginning of the period,

P_1 is the population at the end of the period,

t is the number of years intervening, and

r is the annual rate of change.

As noted above, rates were computed only between national census returns and only for those considered "comparable." Comparability, which was assumed to be present —lacking evidence to the contrary—was considered to be dependent on consistency throughout the series as to type of census, i.e., *de jure* or *de facto,* on a more or less consistent degree of under- or over-enumeration, and on unchanged area or the adjustment of population to the present area. Since, in general, separate series are shown for *de jure* and *de facto* and for changing geographic areas, no rates are computed between data in two series. None appears between two returns, one of which is believed to be grossly over- or under-enumerated. No rates are calculated for non-national census series, because it is believed that population change in these segments is not representative but often the result of extraneous factors not demographic in origin.

Limitations: Because these are enumerated populations, they are subject to under- or over-enumeration and to variations in the concept of *de jure* and *de facto* through the years. Wherever it was significant, the factor of under- or over-enumeration has been pointed out in the tables. The only available information on the definitions of the total population is that found in Table A, p. 8. Reference should be made to this table for information on population composition at the latest census. For previous censuses, no definitive information is available, but it may be assumed that they followed more or less the same pattern.

Table 5

The distribution of national population totals among the major civil divisions of the country or territory and, in some cases, the number of inhabitants in the capital city, is given in Table 5. The sources of the information are the censuses of population taken between 1945 and 1954.

Unless otherwise noted, the civil divisions are those currently in use in the country as presently constituted. Exceptions noted in the table include India and Pakistan, where administrative changes are taking place, and several countries in Europe, where it is known that reconstitution of civil divisions has occurred but revised data are not yet available.

Table 5 shows the name of each individual state, province, department, district, or commune, as reported by each country, in the original language or a transliteration of it. This method of presentation was adopted in view of the difficulty of establishing acceptable English and/or French equivalents. For the same reason, civil divisions reported from an English- or French-speaking country appear only in English or French, with no attempt at translation.

The generic names of the civil divisions, on the other hand, are given in both English and French and, where the translation might be questionable, the original language is also given in italics. In a few cases where no equivalent was known, the original language alone appears in the table as for example in Portugal and its colonies where the civil divisions are known as *concelhos.*

The civil divisions, whatever their type, are listed in alphabetic order for easy reference.

Coverage: Distributions are shown for 139 geographic areas, including only national censuses or those covering the major portion of the population, e.g., Africans in Rhodesia, Jewish population in Israel, and so forth. Limitation of the table to national data or its nearest equivalent is based on the assumption that the geographic distribution of a small segment of the total population, as for example European population in an African territory, would be of limited utility, except in so far as it provides the names of the administrative subdivisions.

Limitations: Both the administrative significance and the average size of major civil divisions vary greatly among the world's countries and territories. Thus, in terms of administrative significance, a "province" as understood for Canada is not exactly equivalent to the same type of civil division in British Guiana or Costa Rica, for example. "Counties," the major civil division in Norway, are more or less equivalent to the corresponding county in England and Wales, but only remotely to the states in the United States of America, which, in theory, should correspond as major civil divisions. This terminology which designates by the same words fundamentally different types of administrative divisions should be kept in mind when using data in Table 5.[4]

Data in Table 5 are heterogeneous in nature as well as terminology. In many cases, the divisions reported are not major civil divisions, but those of a lower administrative level. Thus "communes" may be given for a country in which the major civil division is an *"arrondissement";* "departments" may be shown where the larger division is a "region". Thus, data for major civil divisions will be mixed with those for intermediate and minor administrative units in some cases. Some indication of the frequency of this type of mixture can be ascertained from the reference cited above.

[4] For a detailed analysis of the administrative systems in 53 countries, see "Administrative divisions by type and number . . ." in the *Handbook of Population Census Methods.* United Nations, Department of Economic Affairs, Statistical Office, document ST/STAT/SER.F/5, New York, June 1954. p. 108-112.

A related problem arises for those countries which classify population not in major civil divisions but within geographic boundaries having no administrative significance. Among these will be found countries which have no civil divisions or that furnish data for geographic units judged to be more relevant to demographic purposes, e.g., individual islands of an island group.

Another source of variation is that noted above in reference to the present constitution of the country. In some cases, noted in the tables, the civil divisions for which data are shown do not represent the present administrative organization of the country. Hence, these data can be used only with reference to the territory as of the date of the census.

Since by their nature, data in this table cannot be internationally comparable, the definition of the total population employed and the degree of underenumeration are only important in so far as they may affect the relative values for individual civil divisions within a country. The *de jure/de facto* nature of the census will, of course, affect the size of some administrative divisions more than others. Likewise, underenumeration is undoubtedly more prevalent in some regions than in others. Information on the implications of these factors will have to be sought in national census reports.

Table 6

Table 6 presents the population of the national capital of each country, irrespective of size, together with that of cities having 100 000 or more inhabitants at censuses taken between 1945 and 1954.

Since the way in which cities are delimited differs from country to country, efforts have been made to include in the table not only data for the so-called "city proper" but also those for the "urban agglomeration" if such exists. The urban agglomeration has been defined as including the suburban fringe or thickly settled territory lying outside of, but adjacent to, the city boundaries. Whenever an "urban agglomeration" figure is available, it has been used as the basis for applying the 100 000 criterion in order that every "city" of the selected size class, however defined, may be included.

Except for the capital city, which is given first irrespective of size, the order of presentation in Table 6 is by population size of city proper, the largest being given first. This method is chosen because most countries report "city proper", while fewer have urban-agglomeration tabulations. This presentation means, however, that the "agglomerations," when available, may not be in strict population-size order.

In respect of language, the city names have been treated in the same way as the civil division names in Table 5, that is, they are shown in the language of the country to which they pertain or, if required, in a transliteration of it. Cities in English- or French-speaking countries are listed in either of those languages as reported, without translation. These principles of presentation were adopted because of the difficulty of establishing English and/or French equivalents for official names of cities.

Coverage: A total of 127 countries and territories are included in Table 6. Of these, 73 show only the capital city, indicating that at the time of the last population census taken between 1945 and 1954, no city in that country had 100 000 or more inhabitants. "Cities proper" of 100 000 or more number 676, but this should not be considered the world total for cities of this size because many countries of the world have never taken a census and, for others, the latest available data are for years prior to 1945 and thus are not shown.

Limitations: Since these populations are census figures, they are limited by the same factors as affect the accuracy of the total population count. Thus, the figures may suffer from underenumeration and from problems of definition of the "census" population. These limitations may be very much more effective on "city" populations than on the total. Problems of defining residence in respect of a city and the difficulties of interpreting a *de facto population* of the same area at a moment of time make city populations untrustworthy.

Comparability is limited also by variations in the national concepts used to define a "city" for administrative purposes. In most countries, "cities" are localities with fixed boundaries and an administratively recognized "urban" status which is usually characterized by some form of local government. In others, e.g., Japan, the "city proper" is an administrative division composed of a major agglomeration and adjoining territory, which may be distinctly rural in character and which may contain other quite separate agglomerations. Whenever it was known that the data referred to the latter type, they have been noted in the table.

Data in Table 6 are of limited value in making international comparisons of relative city size, because of the lack of comparability in the national concepts used and also because data refer to the dates of census which differ from country to country. City populations increase or decrease rapidly as the result of economic and social changes, and census populations are thus soon "out of date." However, since estimation of city populations is correspondingly difficult, the census figures still remain the best base for evaluation.

2. Urban — rural

Statistics which may be used to measure the relative urbanization of countries and territories are presented in two tables in this *Yearbook*. In Table 7 is set forth the total population classified according to a dichotomy of "urban" and "rural," as defined by each country; in Table 8, the same population is classified into eleven locality-size groups.

Internationally comparable statistics of the urban and rural population are needed for many purposes. The measurement of economic and social development is often a function of urbanization; the distinguishing of urban-rural patterns of fertility, mortality, and so forth, as well as their relationship to levels of living, is also a large area where urban-rural distributions of population are required.

However, as will be seen from the definitions included in Table 7, the concept of "urban" differs radically from country to country. The difference is one of concept and of classification. In some countries, the minor civil divisions, which are the smallest units in the administrative network of the country, are the basis for the classification;

in others, the classification is based on the size of localities, irrespective of their administrative boundaries. Further, in the countries which classify administrative units into urban or rural, there is wide variation in the criterion used.

Because national classification of administrative subdivisions into urban and rural presents such diversity and because the results appear to be inadequate for achieving international comparability, it has been recommended by the United Nations Population Commission[5] that in addition to such tabulations, population be classified also by size of locality or identifiable agglomeration. This would, in fact, follow the principle of measuring urban population directly in terms of the unit of urbanization, namely the agglomeration, but it also recognizes the fact that there is no definite point in the continuum between "rural" and "urban" where the one ends and the other begins. The line drawn between the two is, therefore, arbitrary. A more systematic classification scheme would make possible the comparison of urbanization from country to country in terms of the proportion of the population identified as living in agglomerations of various sizes. Table 8 brings together the census data available classified according to this type of scheme.

Table 7

In Table 7, the population of 105 geographic areas at censuses between 1945 and 1954 has been classified by sex and as "urban" or "rural" according to the definition employed by each country. For clarity, the actual definition of "urban" used is shown on the table. The percentage of population classed as urban and rural has also been computed, for males and females separately and for both sexes combined. This table, therefore, furnishes considerable information on relative urbanization throughout the world.

Unless otherwise noted, data relate to the modified present-in-area population within present territorial boundaries.

Coverage: A total of 105 geographic units are included in this table for one or more censuses taken between 1945 and 1954. The geographic coverage is thus more extensive than it was in the 1952 *Demographic Yearbook* where a similar table last appeared, but the temporal coverage of the table is less, the previous one giving data back to 1900.

Because of their nature, the data relate to those censuses which were national in character and which included all the persons present or residing in the area. It will be noted that in 12 countries, the sex distribution was not available, the urban-rural classification being given only for both sexes combined.

Limitations: The basic limitations imposed by variations in the definition of the total population and in the degree of underenumeration is perhaps more important in relation to urban-rural than to other distributions. The classification by urban and rural will, for example, be affected by variations in defining usual residence for purposes of subnational tabulations, inasmuch as urban is usually defined in terms of minor civil divisions, towns or cities. Likewise, the geographic differentials in the degree of underenumeration in censuses will affect the comparability of these categories throughout the table. A more important and specific limitation, however, lies in the national differences encountered in the definition of "urban".

Because the distinction between urban and rural areas is made in so many different ways, the definitions have been included in the table itself. They are shown in the right-hand column, opposite the statistics to which they apply. The definition given applies only to the urban component of the population; it is understood that the remainder of the population is rural, any exceptions to this being indicated in footnotes to the data. The defintions are necessarily brief and where the classification as urban or rural involves administrative civil divisions, they are often given in the terminology of the particular country. As a result of variations in terminology, it may appear that differences between countries are greater than they actually are. On the other hand, similar or identical terms (e.g., "town," "village," "district") as used in different countries may have quite different meanings.[6]

It will be seen from an examination of the definitions that they fall roughly into three major types: (1) classification of minor civil divisions on a chosen criterion which may include a) type of local government, b) number of inhabitants, c) proportion of population engaged in agriculture; (2) classification of administrative centres of minor civil divisions as urban and the remainder of the division as rural; and (3) classification of certain size localities (agglomerations) as urban, irrespective of administrative boundaries.

Thus, urban status may be granted to places with as few as 250 inhabitants in Denmark, while in Korea, the lower limit is 40 000 persons. In Northern Ireland and Bulgaria, "urban" means places with urban status, regardless of size; in Israel, it implies predominantly non-agricultural centres; in Malta, built-up areas devoid of agricultural land. The lack of strict comparability as evidenced by the vague and diverse definitions will be immediately apparent.

The designation of areas as urban or rural is so closely bound up with historical, political, cultural, and administrative considerations that the process of developing uniform definitions and procedures moves very slowly. Not only do the definitions given in Table 7 differ one from the other, but in actual fact they may no longer reflect the original intention of distinguishing urban from rural. The criteria once established on the basis of administrative subdivisions (as most of these are) become fixed and resistant to change. For this reason, comparisons of data over time may be invalidated by the inapplicability of the definition to current circumstances.

Despite their shortcomings, however, statistics of population by urban and rural are useful for comparing on a broad scale degrees of urbanization between countries or territories. No matter how they are defined, "urban" is likely to include a heavy concentration of clearly urban population, while "rural" will be heavily weighted toward

[5] Report of the Population Commission (Fourth Session), document E/1313. p. 26.

[6] For a more extended treatment of problems and practices in urban and rural classification, see *Data on Urban and Rural Population in Recent Censuses*, United Nations. Department of Social Affairs, Population Division and Department of Economic Affairs. Statistical Office. Document ST/SOA/SER.A/8, Lake Success, July 1950. 27 p.

village or clearly rural areas. Thus, the differences between urban and rural characteristics of the population, though not precisely measured, will tend to be reflected in the statistics.

Table 8

The number of "localities" which have populations of selected size together with the aggregate population of each size class by sex, is given in Table 8 for each census taken between 1945 and 1954.

Localities shown may be administrative subdivisions with fixed boundaries, i.e., communes, towns, cities, and so forth, agglomerations without fixed boundaries, or some combination of these. The type of locality classified so far as it is known for each country is given in footnotes to the table.

Irrespective of type, localities are classified for size as follows: Under 200 inhabitants, 200-499, 500-999, 1,000-1,999, 2,000-4,999, 5,000-9,999, 10,000-19,999, 20,000-49,999, 50,000-99,999, and 100,000 and over. A residual category is provided for localities not classifiable elsewhere.

Unless otherwise indicated, these data refer to the modified present-in-area population within the present territorial boundaries of the countries concerned.

Coverage: Statistics are shown in Table 8 for 93 geographic units. The censuses included are those covering all the population or a major part of it, e.g., Jewish population in Israel. A total of 107 distributions are included, of which 64 provide the cross-classification by sex.

Limitations: Data in Table 8, being census statistics, are affected by all the limitations imposed by the differences in definition of total or "census" population and the varying importance of underenumeration in the census count. The implication of these has been discussed on p. 7.

In addition, statistics of population classified by size of locality are subject to all the limitations which arise from the various national definitions of "localities." The units for which data are given in Table 8 fall into three general types, which may be explained as follows:

a—Agglomerations or clusters of population without regard to official boundaries or administrative functions. Countries using this type of classification often do not identify agglomerations of every size, but only those above a stated minimum, e.g., places of 200 or more inhabitants, or places of 1,000 or more inhabitants.

b—Localities having fixed boundaries and an administratively recognized "town" status which is usually characterized by some form of local government, operating under a charter or under terms of incorporation. Such localities have various designations. Among the most frequent are: "cities," "towns," "boroughs," "urban districts" and "municipalities." Sometimes, they are districts which include a central agglomeration and the surrounding territory that is administered from the central place; sometimes, they are separate cities, wholly urban in character, with "city limits" which may fall inside the edges of the agglomeration. The aggregate of these localities often comprises the urban population as defined by the particular country.

c—Minor civil divisions (often the smallest administrative divisions) which have fixed boundaries and which together comprise the entire territory of the given country. Such units do not necessarily have local government or town status, though some of them—usually those with large populations — may be in this category. Classifications of this type are the most difficult to evaluate with respect to their conformity to agglomerations or clusters. In most countries, they conform in a general way so far as relatively large agglomerations are concerned, but medium-sized and small clusters are likely to be obscured by the adherence to fixed territorial units. In a number of countries which give this type of classification, all such units above a stated population are assigned to the urban population.

It will be noted that these three classes are not mutually exclusive, there being overlapping between the components of categories. Some degree of comparability may be assumed to exist between data for localities in the same type class (**a, b, or c**), but care should be taken in drawing conclusions from data of different types. Reference may be made to Tables 5, 6, and 7 for clarification in some instances.

Table 9

This table is the first presentation in the *Demographic Yearbook* of data on the number and size of households. The table shows the population distributed according to the total number of households, the number and size of private or ("family") households and the number of institutional (or "non-family") households. These are data from national population censuses taken between 1945 and 1954. They relate, unless otherwise indicated, to the modified present-in-area population of the countries and territories within present territorial boundaries.

Private households in this table are classified by number of members from 1 person to 16 and over; institutional households are not sub-classified. This is a more extensive classification than that recommended by the Population Commission at its fourth session[7] which carried the categories to 10 and over.

Coverage: A total of 72 distributions for 67 separate geographic areas are set forth in Table 9. These statistics are based in general on the census definition of household which may differ slightly from country to country, but which conforms basically either to the dwelling-unit concept or the housekeeping concept (see below). For consistency, several distributions based on the biological family concept have been excluded from this table.

Limitations: Households are generally classified into two main groups, namely private (or "family") households and institutional (or "non-family") households.

The private (or "family") households constitute, by and large, the majority of all households and are generally classified into multi-person households and single-person households. Institutional households are usually defined as groups of persons who live together but who do not constitute private households, such as correctional and penal establishments, mental institutions, homes for the aged, hospitals, convents, military installations, hotels, boarding houses, schools and colleges where students live in, etc.

[7] Report of the Population Commission (Fourth Session), document E/1313. p. 27-28.

There are two principal concepts upon which most definitions of private households are based. The first defines the household as the *total number of inhabitants of a dwelling unit.* The second concept identifies the household as consisting of *one or more persons living together as a housekeeping group.*

The first concept presupposes the prior adoption of a dwelling definition, and it affords a unit of enumeration which serves to facilitate and control the collection of the census data. This concept, however, fails to provide information on separate housekeeping groups sharing the same dwelling.

The second concept is not primarily based on a dwelling definition and is designed to provide information for the direct analysis of separate housekeeping groups within one dwelling. The use of this concept involves the need for very specific enumeration instructions for the identification of such separate housekeeping groups.

The main difference between the two concepts lies in the fact that the first concept admits *only one household per dwelling unit,* whereas the second admits *one or more households per dwelling unit.* Thus, in view of the close relationship which exists between the household concept and the dwelling concept employed, both concepts should be studied together in order to facilitate the interpretation of the meaning of the household data.

The number and the size of households are necessarily affected by the type of concept used. Thus, if the household is defined as the total number of inhabitants of a dwelling, the number of households may be smaller, and the average size of the household would be larger, than if the household had been defined as the group of persons living in a housekeeping group. The lodger (i.e., a person sharing a dwelling but not sharing meals or budget with other occupants of a dwelling) who under the second definition may be considered a single-person household, would under the first definition not constitute a separate household but would be included with the host household, which then would be increased in size.

The relative number of private and institutional households may be affected by the criteria established for determining whether certain borderline cases are to be classified as private or institutional households. Thus, the directors or the personnel of institutions, hotels, etc., occupying a separate dwelling are in some censuses counted as private households. Guests in hotels who have no other residence are also, when they fulfil certain requirements, enumerated as private households in a few censuses. A boarding house may be classified as a private household if the number of boarders does not exceed the number of the family members, including servants, or if the number of boarders does not exceed a given number, usually 5 or 10, depending on the definition adopted.

Because of these variations in both household and dwelling definitions, the data on households may not be directly comparable. It would be advisable to consult the national census publications to determine how the concepts were applied in each case. Information on the method of enumeration indicating, for instance, whether the household includes persons temporarily absent at the time of the enumeration but whose "usual" residence is the dwelling unit, is especially important in evaluating the significance of the household data.

3. Age and sex

Statistics of population (and of births and deaths) classified by age and sex are presented in 9 tables of this *Yearbook.* Table 10 in two parts, A and B, presents statistics of enumerated and estimated population by 5-year age groups; Table 11 shows enumerated population by single years of age; Table 12 gives these same census returns according to marital status and age; Table 13 presents literacy crossed with age and sex; Table 15 shows the economically active population by age; and Tables 17 and 18 the female population 15 years of age and over by age and number of children born and living. In addition, births by age of mother and deaths by age of decedent appear in Tables 21 and 26.

Age — the characteristic most universally investigated both in population and vital statistics — is commonly determined on the basis of two types of questions, used singly or in combination. The first type asks for date of birth; the alternative method requires age in completed units of time, that is, age at last birthday. For infants, the latter question becomes age in the largest completed units of time, i.e., months, weeks, or days. There is evidence that the date-of-birth type of inquiry yields more precise data than the direct question, but it is obviously of limited applicability in areas where a large proportion of the population is illiterate or unable, for other reasons, to give the exact date of birth. On the other hand, the direct question on "age" is often answered incorrectly by the respondent either through ignorance or deliberate misstatement.

Another source of variation may be found in the method of classifying the data after they are collected. The conventional method is to convert the date of birth to "age at last birthday" by subtracting the exact date of birth from the date of the census. This "age," which will be in the largest units of completed time, i.e., years, months, weeks, days, would then be classified into the age groups selected, or by single years if desired. This method of "completed years" is not always used, however. Some countries classify population not by age, but by year of birth. In such a classification, all children born in the year immediately prior to the census year would be one year of age even though, if they were born 30 November and the census were taken 1 January of the succeeding year, they had "completed" only one month of life. Evidence of this type of classification is seen in the distributions where the under-one-year category appears smaller than it should be in relation to the succeeding categories. It should be noted, however, that for a year during which a large number of births took place, the effect may not be so clear. A good example may be seen in the single-year-of-age data for Norway 1946, which were classified by year of birth. In this distribution, the "under-1-year" category shows 69 133 persons, while the 1-year-of-age group shows 62 464. This is apparently the result of the fact that the birth rate reached its post-war peak in Norway in 1946. Wherever it is known that the classification is based on year of birth, it is noted in the tables.

Irrespective of the methodology used, accurate investigation of age involves many difficulties. Mis-statements arise from numerous factors, among which—as noted above —may be cited ignorance of correct age; carelessness; ten-

dency to state age in figures ending in certain digits, such as zero, five, two, and eight; a possibly subconscious aversion to certain numbers such as 13; and wilful misrepresentations arising from motives of an economic, social, political, or purely individual character. Children tend to be omitted from censuses through being overlooked.

As a result of these difficulties in enumeration, certain irregularities appear in the age-sex statistics of many countries. Some of these aberrations may be identified as: (1) underenumeration of infants and young children, (2) heaping at ages ending in 0 and 5, (3) a preference for even ages over odd ages, (4) unexpectedly large differences between the numbers of males and females at certain ages, and (5) unaccountably large differences between the numbers in successive or adjacent age groups. To the extent that these irregularities are present, the usefulness of the statistics for certain purposes is affected.

Comparison of identical age-sex cohorts from successive censuses, as well as study of the age-sex composition in each census, reveals these and other inconsistencies, some of which are characteristics of even the most "modern" censuses. Examination of the data on age and sex presented in this and earlier issues of the *Yearbook* has shown that in some cases the statistics are particularly faulty in these respects.

Previous issues of the *Demographic Yearbook* have presented statistics by age only in 5-year age groupings. When presented in this form, some of the irregularities in the age statistics tend to be obscured or eliminated, though not entirely. The accuracy of the frequencies in the 5-year groups continues to be affected, but the degree of distortion is not always readily evident. To measure the accuracy of statistics on the evidence of irregularities in 5-year groups, an index was devised.[8] Although this index is sensitive to various sources of inaccuracy in the data, it can also be affected considerably by real fluctuations of past demographic development. It cannot, therefore, be applied indiscriminately to all types of statistics, unless certain adjustments are made and caution is used in the interpretation of results.

The publication in the present issue of the *Demographic Yearbook* of population statistics by single years of age makes it possible to apply a simple, yet highly sensitive, index whose interpretation is relatively free from consideration of factors not connected with the accuracy of age returns. More refined methods for the measurement of age accuracy by single years have also been devised, but the choice of the index was based on the consideration of its simplicity and the wide use it has already found in other sources. This measure is attributed to Whipple and has become known as "Whipple's Index," or the "Index of Concentration."[9]

"This index is obtained by summing the age returns between 23 and 62 years inclusive and finding what percentage is borne by the sum of the returns of years ending with 5 and 0 to one-fifth of the total sum. The results would vary between a minimum of 100, representing no concentration at all, and a maximum of 500, if no returns were recorded with any digits other than the two mentioned."[10]

The index is applicable to all age distributions for which single years are given at least to the age of 62, with the following exceptions: (1) where the data presented are the result of graduation (e.g., the statistics for India and Canada, shown in this issue), no irregularity is scored by Whipple's Index, even though the graduated data may still be affected by inaccuracies of a different type; (2) where statistics on age have been derived by reference to the year of birth, and tendencies to round off the birth year would result in overly frequent age returns with odd figures of age (as is the case with the results of the Yugoslav census of 1948), the frequency of age returns with terminal digits 5 and 0 is not an adequate measure of their accuracy.

Using the statistics for both sexes combined, the index has been computed for all the single-year age statistics presented in this issue, with the exception of those excluded on the criteria set forth above. For convenience of presentation, the results were grouped in the following five categories:

		Whipple's Index
I.	Highly accurate data	less than 105
II.	Fairly accurate data	105-109.9
III.	Approximate data	110-124.9
IV.	Rough data	125-174.9
V.	Very rough data	175 and more

These categories are of necessity arbitrary and, in some instances, they separate two sets of statistics varying but slightly in accuracy. Thus, an index of 104.4 was obtained for the European population of New Zealand in 1945 whereas, for the total population of New Zealand, the index amounted to 105.2, a difference which is trivial but which causes the latter to be classified in Category II rather than I. The results of this tentative rating of 97 distributions in terms of the age accuracy of specific censuses indicated by year, were as follows:

Category I. Algeria 1948 (Europeans), Argentina 1947, Australia 1947, Austria 1951, Belgium 1947, Berlin 1946, Denmark 1945 and 1950, Eastern Germany 1946, England and Wales 1951, Faeroe Islands 1950, Finland 1950, France 1946, Germany 1946, Greenland 1945, Iceland 1950, Ireland 1946 and 1951, Japan 1947 and 1950, Liechtenstein 1950, Luxembourg 1947, Madagascar 1951 (Europeans), Morocco, Fr. 1951 (Europeans), Netherlands 1947, New Zealand 1945 (Europeans), New Zealand 1951 (European and total), Northern Ireland 1951, Northern Rhodesia 1951 (Europeans), Norway 1946 and 1950, Papua 1954 (Europeans), Ryukyu Islands 1950, Saar 1946 and 1951, Scotland 1951, Southern Rhodesia 1946 and 1951 (Europeans), South West Africa 1946 (Europeans), Sweden 1945 and 1950, Switzerland 1950, Union of South Africa 1946 (Europeans), Union of South Africa 1951 (Whites), West Berlin 1950, Yugoslavia 1953;

[8] In this index, differences were scored from expected values of ratios between numbers of either sex in the same age group, and numbers of the same sex in adjoining age groups. In compounding the score, allowance had to be made for certain factors such as the effects of past fluctuations in birth rates, of heavy war casualties, and of the smallness of the population itself. A detailed description of the index, with results of its application to the data presented in the *Demographic Yearbooks* of 1949-1950 and 1951, is furnished in *Population Bulletin* No. 2 (United Nations, Department of Social Affairs, document ST/SOA/Ser.N/2, New York, October 1952, p. 59-79). The scores obtained from statistics presented in the 1952 *Demographic Yearbook* are presented in that issue, and the index has also been briefly explained in that issue, as well as those of 1953 and 1954.

[9] *Thirteenth Census* . . . United States Bureau of the Census, Vol. I, p. 291-292.

[10] Census of India, 1921, Vol. I, Part I, report by J. T. Marten, Calcutta, 1924, p. 126-127.

Category II. Alaska 1950, Barbados 1946, Bermuda 1950, Greenland 1951, Hawaii 1950, Isle of Man 1951, Israel 1948, Malta and Gozo 1948, Nauru 1954, New Guinea 1954 (non-indigenous), New Zealand 1945 (total), New Zealand 1951 (Maoris), United States 1950, Western Germany 1950;

Category III. British Guiana 1946, British Honduras 1946, Leeward Islands 1946, New Zealand 1945 (Maoris), Norfolk Island 1954, Portugal 1950, Rodrigues 1952, Thailand 1947;

Category IV. Algeria 1948 (Moslems), Brazil 1950, Ceylon 1946, Costa Rica 1950, Fiji Islands 1946, Greece 1951, Mauritius 1952, Panama 1950, Philippines 1948, Puerto Rico 1950, South West Africa 1946 (total), Tanganyika 1952 (non-indigenous), Trinidad and Tobago 1946, Union of South Africa 1946 (total), Venezuela 1950, Windward Islands 1946;

Category V. Bolivia 1950, Cyprus 1946, Dominican Republic 1950, Ecuador 1950, El Salvador 1950, Egypt 1947, Guatemala 1950, Haiti 1950, Mexico 1950, Nicaragua 1950, Portuguese Guinea 1950 (non-indigenous), Turkey 1945 and 1950.

The scores were also computed separately for each sex. It is commonly held that age statements for males are more accurate than those for females, but this is not invariably the case. Thus, of the 51 sex-age distributions for which a score of 105 or higher was obtained, the score for females exceeded that for males in 45 instances, but was exceeded by that for males in 6 instances. The latter instances, where female age statements are subject to less digit preference than those of males, comprise Barbados, Hawaii, New Guinea, New Zealand 1951 (Maoris), Portuguese Guinea, and Haiti.

In interpreting this index, one should bear in mind that it measures the effects of preferences for age returns ending in 5 and 0 only. It can, however, be assumed that such digit preference is usually connected with other sources of inaccuracy in the age statements. With this proviso, the index can be accepted as a fair measure of the general accuracy of age statements.

Table 10

The distribution of population enumerated between 1945 and 1954 by sex and five-year age categories is presented in Part A of Table 10. To maintain continuity in the regular presentation of basic demographic series, yet avoid mixing censuses with estimates in the same table, the latest available post-censal estimate for a number of areas is presented in Part B. A cross-reference from the census distribution to the corresponding estimate is included when both are available.

For a number of countries, these data may represent final revisions of provisional or sample distributions published in previous issues of the *Yearbook,* while for very recent censuses, these distributions may themselves be provisional, as indicated in footnotes to the table.

The census data shown are both national and subnational segments, depending on the coverage of the respective enumerations. The estimates are assumed to be constructed on the basis of the census returns using statistics of births, deaths, immigrants, and emigrants to adjust the base population to a current date.

The age classification shown for censuses and estimates is based, unless otherwise indicated, on age at last birthday. It includes 20 categories as follows: under 1 year; 1-4, 5-9, continuing in 5-year groups to 84; a residual category of 85 and over; and unknown. This classification represents a slight modification of that recommended by the United Nations Population Commission,[11] which suggested single-year tabulations from 1 through 4 and 5-year groups to the end of life. Since age in single years for many countries is given in Table 11, it was not considered necessary to duplicate the 1-4 categories separately here.

Unless otherwise noted, the data relate to the modified present-in-area population of geographic areas within present territorial boundaries, as described on p. 6.

Coverage: Table 10, Part A and B, includes one or more age-sex distributions for 152 geographic units, comprising a total of 230 separate distributions, of which 190 relate to a census count and 40 to post-censal estimates. This coverage is the most extensive ever published in the *Demographic Yearbook* and represents the most comprehensive compilation of age-sex statistics currently available.

Despite its extensive coverage, Table 10 does not include an age-sex distribution of population for every major area. A number of estimated distributions have been excluded from the table because of unacceptability of the method of construction employed. These are distributions which result when the estimated total population is distributed by age and sex according to the percentages of population in the desired categories at the time of the census. Such distributions, though not included here, are available for Bolivia, Ceuta, Ceylon, Colombia, Dominican Republic, Egypt, Melilla, Mexico, Peru, Philippines, Spain, and Thailand.

Limitations: Comparability of population data classified by age and sex, both enumerated and estimated, is limited by variations in the definiton of total population which has been discussed in detail on p. 7, and by the completeness of the original enumeration, also discussed above. Both of these factors are more important in relation to certain age groups than to others. For example, underenumeration is known to be more prevalent among young children than at older ages; the composition of the "total" or "census" population is primarily a function of the inclusion or exclusion of certain groups who may be of selected ages, such as members of the armed forces and so forth. Consideration should be given to the implications of these limitations in using the data.

In addition to the inherent defects of population-census data in general, estimates of population vary considerably in their reliability. To evaluate this factor, reference should be made to the "Type of Estimate" code described on p. 9. The classification of 1954 estimates by this code may be found in Table 1, and it may be assumed that the code is generally applicable to post-censal estimates unless otherwise indicated.

In addition to these general qualifications, special problems of comparability arise in relation to age data in Table 10. Age-sex distributions of population are known

[11] Report of the Population Commission (Fourth Session), document E/1313. p. 17.

to suffer from certain deficiencies which have their origin in underenumeration of infants and in irregularities in age reporting. A discussion of these irregularities together with a description of the procedures for testing age accuracy and the results of its application to the single-year-of-age data in Table 11 are given on p. 19. Although, as noted, some of the irregularities in the age statistics tend to be obscured or eliminated when data are tabulated in 5-year age groups, the accuracy still continues to be affected though the degree of distortion is not always readily seen. The results of the test given on p. 19 will thus serve as a guide to the evaluation of age-sex accuracy in this table. Since no selection has been made in respect of distributions included in Table 10, except that they be the product of a "true" census, caution should be used in interpreting data for which the Index indicates questionable accuracy.

Another limitation on comparability is found in the basis for the age classification employed by the various countries. Whenever it was known that the classification was based on other than age at last birthday, the data are so noted in the tables and allowance should be made for this factor in using the data.

Similarly, deviations from the standard age classification of the table are shown by bracketing and footnotes. Although precise international comparability is often lacking, the data are nevertheless included because of their basic value for the area concerned. This is particularly true for African areas. Since statistics for these territories have not been generally available until recent years, the results of sample censuses and others employing unconventional methodology are included because of the scarcity of information for this continent.

In connexion with the age classification, it should be noted that zero frequency reported in the unknown-age category is not always an indication of perfect age reporting, but may be an indication that ages have been assigned to these schedules before tabulation began. The method of age allocation is not always known and hence it is noted infrequently in the tables, but the possibility of its having occurred should not be overlooked.

Table 11

This table, which shows population enumerated between 1945 and 1954 by single years of age and sex, has never appeared in the *Demographic Yearbook* previously. Because of its utility, this type of census tabulation is made by most countries of the world. Not only does it provide information on the number of males and females in variously defined special age categories, as for example "school age," "pre-school age," "working age," "voting age," "marriageable age," and so forth, but it is essential for evaluating the reliability of age data in general (see below).

Table 11 shows age in single years from under 1 to 100 and over, for both sexes combined and for male and female separately. An unknown-age category is also provided. Unless otherwise noted, age is defined, in accordance with the international recommendation,[12] as age at last birthday. The distributions are not graduated or smoothed except in one or two cases indicated in the tables.

[12] Report of the Population Commission (Third Session), document E/805. p. 14.

Unless otherwise indicated, the data relate to the present-in-area population within the 1955 boundaries of the country concerned.

Coverage: Since this is an almost universal tabulation, data from censuses taken between 1945 and 1954 are available for 106 distributions, relating to 85 countries. Distributions for total population and for ethnic segments are included for complete coverage.

Limitations: These statistics, like other census data, are subject to the qualifications described above on p. 7, namely variations in the meaning attached to the terms *de facto* and *de jure* and differences in the completeness of the count at various ages. The variations in completeness of enumeration according to age, and the implications of the total-population definitions in respect of age should all be kept in mind in using these data.

Data in this table are also subject to the limitations imposed by basing the age classification on year of birth rather than completed years of age. The implications of this procedure have been set forth above.

In this table, the unknown-age category often appears with zero frequency. This is not always an indication of complete age reporting; it indicates often that unknown age has been apportioned to the other categories by some method. This allocation of unknowns is sometimes the reason for the differences observed between the 5-year age groups derived from the single-year-of-age distribution, and the corresponding 5-year age-group tabulations by sex, literacy, marital status, economic activity, and so forth.

Distribution by single years of age reflects clearly the tendency for digit preference. To evaluate this tendency in terms of the accuracy of the age-sex distribution, Whipples Index has been computed for many of the single-year-of-age distributions. The results of this test, set forth in five broad categories of accuracy, are given on p. 19 above. Reference should be made to this discussion before using data from Table 11, because the criterion of accuracy has not been employed in selecting countries for presentation in this table.

The discrepancies between the 5- or 10-year sub-totals shown in other tabulations involving age and those obtained by summing the appropriate classes of this table, are the result of several factors. As noted above, they may be due to the apportionment of the unknowns in the single-year categories and not in the tabulation by grouped ages. They may also be due to the fact that one of the distributions is based on a sample tabulation rather than a full count or that one is a provisional tabulation, while the other is final. In so far as possible, where a discrepancy was revealed, the basis of the difference has been explained in notes. There remain one or two for which the reason is not evident.

Table 12

Enumerated population, classified by marital status and age, for males and females separately, is set forth in Table 12. This table was last shown in the 1949-50 *Yearbook,* where it included pre-1950 censuses of population; the presentation of Table 12 includes data from national censuses taken between 1945 and 1954.

Unless otherwise stated, the marital-status categories shown are defined as follows: (1) single, i.e., never married; (2) married, including persons in stable *de facto* (customary or consensual) unions and persons living apart ("separated") from their spouses; (3) widowed, not re-married; (4) divorced, not re-married; and (5) unknown marital status. These are the principal categories recommended by the Population Commission.[13] Footnotes or brackets have been inserted wherever possible to explain deviations from the above definitions. In the absence of a footnote, it must be assumed that the marital-status classes conform to the international definition, but this is by no means certain.

In constructing the table, the five marital-status classes have been held constant, except when the sub-groups of married, that is, "consensually married" and "separated," have been tabulated separately or included with other than "married." Whenever data for either of these two sub-groups are available, they are shown in the table.

Age is defined here, and elsewhere in the *Yearbook,* as age at last birthday. The age classes shown are 15 years and over, under 15 years, 5-year age groups to 74, a residual category of 75 and over, and unknown. This classification conforms to the recommendation of the Population Commission at its fourth session.[14]

The 15-year lower limit has been chosen as a means of providing a common denominator for all countries in the table. However, it will be seen that there is lack of conformity to this age limit, indicated by run-in box-heads in the table. It should be noted that the unknown-age category is not included in the 15-year-and-over sub-total but it is, of course, in "all ages." The symbol for "not available" (...) in the all-age column indicates that a minimum age limit was chosen for the tabulations.

Unless otherwise indicated, data refer to the modified present-in-area population within present territorial boundaries.

Coverage: Table 12 includes 108 marital-status distributions by age and sex for 89 countries and territories. Because of space limitations, the table is restricted to national censuses showing either aggregate returns or indigenous and non-indigenous separately, or to returns for the indigenous sector alone. The coverage, therefore, may be considered a minimum for marital-status tabulations. The non-indigenous populations for which distributions of marital status by age are available but not able to be shown, include Cameroons, Fr. (1946 and 1951), Cook Islands (1945), French Equatorial Africa (1946), French Somaliland (1946 and 1951), French West Africa (1946 and 1951), Kenya (1948), Madagascar (1951), Nauru (1954), New Guinea (1954), Niue (1945 and 1951), Northern Rhodesia (1946 and 1951), Papua (1954), Southern Rhodesia (1946 and 1951), South West Africa (1946), Tanganyika (1948), Togoland, Fr. (1946 and 1952), and Uganda (1948). Moreover, because of the format of the table, it was not feasible to include those distributions which related only to marital status, without cross-classification by age. Distributions by marital status alone are available for 18 additional countries and territories, including the following: American Samoa (1950), Canal Zone (1950), Cape Verde Is. (1950), Ceuta (1950), Chile (1952), Dominican Republic (1950), Honduras(1950), Melilla (1950), Mexico (1950), Mozambique (1950), Nauru (1947), New Guinea (1947), Papua (1947), Seychelles (1947), Spain (1950), Spanish Guinea (1950), Swaziland (1946), and Virgin Is. [US] (1950).

Limitations: Like all population-census data, marital-status distributions are affected by the fundamental concepts employed in defining the "census" population, i.e., *de facto* and *de jure*. Under- or over-enumeration is also a factor to be considered. Both of these sources of variation have been discussed above on p. 7.

The limitations imposed by the introduction of age into the tabulation must not be overlooked. For a discussion of the deficiencies in age distributions, together with an evaluation of the age accuracy of enumerated population, see p. 18.

The comparability of marital-status distributions are also subject to special limitations. The apparent uniformity of the major marital-status categories enumerated in the various censuses conceals important variations in the definitions of the categories. For example, "married" should — in accordance with recommended procedure — include persons reported as married, consensually married, and separated, but it may include only those formally married. Conversely, "single" should include only those never formally married, but it may include also consensually married. The classification of consensual or "common law" marriages in countries where such unions are relatively numerous is thus perhaps the most important consideration with respect to comparability of these data. If a census has not provided specific instructions for the treatment of this group, persons in this category may be reported as married, single, widowed, or divorced depending on their true legal status at the time of the census. Even with appropriate instructions, however, the classification of these individuals is probably only partially controlled, since errors in response would still be a heavily contributing factor. Evidence seems to indicate that partners of consensual unions are more likely to report themselves as married than as single. Because of this tendency and because they are, from the demographic point of view, in fact married, the United Nations Population Commission has recommended that when not tabulated separately, persons reporting these statuses be classified as "married." It will be seen from the table that 24 countries tabulate consensually married separately and none as "single". For the remaining 65 countries, the disposition must be assumed to be "married."

Similarly, the sub-category "separated," unless it includes only persons who have been separated by legal process, is of uncertain composition, being likely to contain also married persons who are simply living apart and who may or may not intend to remain apart. But in any case, since laws and practices with regard to legal separation differ within and among countries, genuine comparability for this group is probably out of the question. Because of the difficulties involved in obtaining accurate and comparable statistics, separated persons are generally included in the category "married," although—

[13] Report of the Population Commission (Fourth Session), document E/1313. p. 17.

[14] *Ibid.* p. 17.

as will be seen in the table—they are tabulated separately for 21 countries and combined with Divorced in 10.[15]

The disposition of marital status unknown in this table may also be the source of international non-comparability. In some countries, marital status is never recorded as unknown, a marital status being assigned on the basis of other information. Thus, the category will appear to have zero frequency even though it has, in effect, been distributed among other statuses.

Table 13

For the first time since the first (1948) issue of the *Demographic Yearbook,* statistics on the literacy of the population by age and sex are presented, in Table 13. These data relate to the modified present-in-area population within present boundaries, unless otherwise noted.

For purposes of this table, literacy has been defined as ability to both read and write. The categories shown are literate, illiterate, and unknown for both sexes, male and female separately. The percentage literate and illiterate at each age-class has been calculated for both sexes combined but, because of space limitations, not for male and female separately.

Literacy cross-classified by age and sex provides a means of establishing a common age range for all countries. National tabulations of population by literacy are commonly restricted to population over a stated minimum age, but since this minimum varies from 7 to 15 years, it is evident that some common denominator must be sought.

The age classes shown in Table 13 are all ages, 10 and over, under 10, 10-14, 15-19, 20-24, 10-year age groups to 65 and over, and unknown. This classification is in accord with the recommendation of the Population Commission at its fourth session.[16]

Variation in the minimum age tabulated for literacy may be observed in the table. New box-heads run in for a country signify non-conformity with the standard and give the age used in the national tabulations. In many cases, the all-age column is shown as "not available" (...), indicating that an age limitation exists.

Coverage: Table 13 includes data for 51 countries and territories. All available and acceptable national distributions of census data cross-classified by literacy and age have been included; those returns tabulated by literacy alone have had to be excluded because of space limitations. Among the latter may be found distributions for national or indigenous populations as follows: Bahrain (1950), Basutoland (1946), Bechuanaland (1946), British Cameroons (1952-53), Cape Verde Is. (1950), French Oceania (1951), Gibraltar (1951), Honduras (1950), Iraq (1947), Macau (1950), Mexico (1950), Newfoundland (1945), Nigeria (1952-53), Portuguese Guinea (1950), Romania (1948), Seychelles (1947), Spain (1950), and Swaziland (1946). In addition, information limited to non-indigenous population is available for French Cameroons, French Somaliland, French Togoland, Madagascar, Mozambique, New Caledonia, and Tunisia.

Per cent computation: In this table, per cent literate is the number of persons recorded as "literate" in each age group per 100 persons in the total population of the corresponding age group. Unknown literacy was ignored, except in so far as it forms part of the total population. If the number of persons not classifiable by literacy is small, the effect of their exclusion would be negligible. If it is large, however, assumptions as to the probable literacy and allocation to one or the other category of the dichotomy would have the effect of increasing one in favour of the other. Similarly, subtraction of persons of "unknown literacy" from the total would have had the effect of increasing the percentages. Since no assumption as to the probable true status of the unknown literacy group seemed warranted, these frequencies have not been allocated or subtracted, and the percentages presented in Table 13 can be considered as minimum values.

Unknown age has been treated as an individual category and a percentage of literacy and illiteracy computed. In order not to make assumptions as to the probable age of the unknowns, they have been excluded from the ten and over sub-total. Per cents have not been computed for the group under 10 years because of its heterogeneity.

Limitations: The principal limitation in connexion with data on literacy arises from variations in the definition of "literacy" and in the varying age limits imposed on the tabulations.

In this table, literate persons are by definition those who can both read and write. Persons able to read and not write are considered illiterate, as are those who can write but not read. The latter is especially important where ability to write is determined by ability to sign one's name. Although conformity to the reading-writing definition is assumed in many cases (the necessary information not being available), it is known specifically for some countries that literacy is not defined in accordance with this standard. In Mauritius, North Borneo, and Macau, for example, literates include semi-literates, i.e., persons who can read but not write. This variation is most likely more widespread than appears from the table, and it should be kept in mind in interpreting the figures.[17]

The other major source of variation originates in the different age limits imposed in the tabulations of literacy by age. Some countries, as will be seen from the table, tabulate all schedules, irrespective of age; others make the tabulation only for persons of 7 years and over, 10 years and over, 14 years and over, 15 years and over, and so forth.

Wherever the minimum age varies, it is obvious that a percentage "literate" computed in relation to the total population would not be comparable from country to country, because the numerator would include varying age segments of the population. To increase comparability, the minimum age in this table has been placed at 10 years and the literate population considered only for ages 10 and over. Countries with a lower minimum age

[15] For specific information on the disposition of the consensually married and separated categories, see *Handbook of Population Census Methods, op. cit.* Chapter VIII, Table 6.

[16] Report of the Population Commission (Fourth Session), document E/1313. p. 20.

[17] For a more detailed discussion, see *World Survey of Education; Handbook of Educational Organization and Statistics.* United Nations Educational, Scientific and Cultural Organization, Loos, France, 1955, 943 p. Also, *Progress of Literacy in Various Countries.* United Nations Educational, Scientific and Cultural Organization, Monographs on Fundamental Education—VI, 1953, 224 p. plus graphs.

limit can usually provide the 10 and over group. However, those with a higher limit cannot be brought into conformity with this concept. This source of variation must be kept in mind in using literacy data for the total population.

The criteria used by the enumerator in deciding on "literacy" and the disposition in the tabulations of persons of unknown literacy are also sources of variation in the statistics. In some countries, evidence of school attendance was considered tantamount to literacy and the person so classified. In some, unknown literacy was considered as "literate" without additional evidence, while in others, absence of an answer to the question was considered to indicate lack of surety and probable illiteracy. These variations, while not evident in the tabulation, must be borne in mind in using the data.

In addition to the special limitations outlined above, it should be remembered that a literacy distribution—like every other census tabulation—is subject to the usual limitations of basic composition and variations in completeness of enumeration.

4. Economic characteristics

Tables on the economic characteristics of population are included in this *Demographic Yearbook* for the first time since the 1949-50 issue. They include statistics obtained from population censuses taken between 1945 and 1954 and specifically information on (1) the number and percentage of inhabitants reported as among the economically active population; (2) the age and sex of the economically active population; and (3) the structure of this population group in terms of industry and status.

All of these data have been collected by the Statistical Office of the United Nations on a specially designed questionnaire, and the tables were prepared in the Statistical Office.

Census data on the economically active population are the most comprehensive of the various statistics used as measures of economic activity. They are particularly important for countries which have no other types of statistics in this field, e.g., social security records, industrial censuses, records of employment offices, and so forth. For these reasons, the geographic coverage of Tables 14, 15, and 16 has been made as broad as possible.

For purposes of these tables, economically active population which refers to the working population sometimes designated as the "labour force" has been defined in accordance with the views of the Population Commission and the Eighth International Conference of Labour Statisticians. In brief, it comprises all persons of either sex engaged or capable of being engaged in productive work in some branch of economic activity during a given period of time. Specifically, the groups included are:

(1) employers, employees, own-account workers, and unpaid family workers

(2) civilians as well as members of the armed forces

(3) employed persons and unemployed persons including those seeking work for first time

(4) persons engaged even part-time in economic activities

(5) domestic servants.

The economically *inactive* population, on the other hand, comprises persons with no economic-activity potential at the moment of the census. This group includes housewives, students, retired persons with or without incomes, inmates of institutions, children, and persons past the working age, and so forth. Wherever possible, exceptions to these definitions were noted in the tables.

As in other types of census data, important variations exist both in the definitions and in methods of compiling data on economic characteristics of the population. A very extensive and detailed treatment of these variations has been set forth in *Application of International Standards to Census Data on the Economically Active Population.*[18] That report notes that "important causes of the lack of international comparability of statistics in this field [of economic characteristics of the population] are: (1) adoption of the 'gainful worker' approach in enumerating the economically active population by some countries and the 'labour force' approach by others; (2) different treatment of certain groups, such as unpaid family workers, retired persons, the armed forces, inmates of institutions, etc.; (3) use of different age limits in enumerating the economically active; and (4) variations in the formulation of the census questions which have produced significant variations in the results."

The "gainful worker" approach requires a statement of "usual" economic activity, more or less independent of time; the "labour force" approach requests information on type of economic activity during a specific brief time interval of, say, one day or week. Both approaches have advantages and disadvantages, but it is clear that the two types of statistics obtained would not necessarily be comparable.

The treatment of the unpaid-family-worker group is perhaps the most important variable, since it is a factor in defining the economically active population. In some countries, women and young people living on farms, for example, are classified as "unpaid family workers" in the economically active population, while in other countries, members of these groups would be classed as housewives and students, and placed in the *inactive* population. Such variations are extremely important in assessing comparability. Similarly, the variation in the treatment of members of the armed forces and inmates of institutions is a source of non-comparability. The differences, which originate in the method of handling armed force and institutional population, as well as those arising from the treatment of the retired-persons group, are the result primarily of the use of the "usual occupation" (gainful worker) approach rather than the "labour force" system.

Persons with dual status, i.e., those engaged only part-time in economic pursuits, are classified in some countries as part of the economically active population, while in others, they are considered as inactive. In still other countries, the decision on the classification of these persons depends on the proportion of time spent in remunerative occupations. All of these variations limit comparability.

There is also considerable variation among countries in the treatment of unemployed persons, particularly new

[18] United Nations. Department of Social Affairs, Population Division and Department of Economic Affairs, Statistical Office. Document ST/SOA/SER.A/9, New York. 139 p.

workers seeking jobs for the first time. In some countries, these persons are included with the economically active population, as recommended; in some countries, they are excluded.

Differences among countries in the definition of the age group of the population to be enumerated for economic characteristics is another important source of variation. A minimum age limit for census questions on economic activities has been used in many countries, dictated by the legal minimum age for employment and the compulsory school attendance age. Not only does this procedure make it impossible to know how many children below the stated age are employed, but it imposes limitations on comparability, because of the variation in the ages selected and because data are not tabulated in such a way that all children below a stated age could be identified in distributions such as that by industry. From Table 16, it will be seen that 3 countries have chosen 15 years as the minimum; 16 have selected 14 years; 6 countries use 12 years; 13 countries have placed the limit at 10 years; and 1 places it at 5 years. Obviously, with such variation in the lower limit, the proportions of the population economically active cannot be strictly comparable from one country to the other.

Non-comparability due to differences in definitions described above affect chiefly the statistics for women, youths and aged persons, because relatively large proportions of the workers in these groups are engaged in unpaid family work or on a part-time seasonal and intermittent basis. Thus, comparability of the statistics for men is, in general, much better than of statistics for women, and the firmest basis for international comparisons is provided by the data for men in the middle range of working ages.

In evaluating comparability, it should be remembered that census data on the economic structure of the population relate to a given period of time near the census date. They are not "current" statistics. Therefore, although such characteristics tend to change slowly, allowance must be made for possible shifts over time, especially in respect to abnormal periods, such as war and its aftermath. International comparability of data for the same year may also be affected by national seasonal employment patterns. Among these may be mentioned shifts toward agriculture at harvest time, the employment of women and students in merchandising and other activities during certain holiday seasons, and the changes in activities during dry and wet seasons in some countries.

Table 14

The most comprehensive, in a geographic sense, of the three tables on the economic characteristics of the population is Table 14, which shows for each sex the total population and the number and percentage of this total classified as economically active, that is, members of the "labour force," at each census between 1945 and 1954. The population involved is the modified present in area within present territorial boundaries.

Economically active is defined to include all persons capable of being engaged in productive work in some branch of economic activity during a given period of time, including those employed and those unemployed.

Coverage: A total of 102 geographic units is included in this table, with data from a total of 110 censuses. Both national censuses and those covering a sub-group of the population are included for maximum coverage.

Per cent computation: Percentages are the number of persons classified as economically active, irrespective of definition, per 100 persons in the total population. They provide a ratio of "producers" to "dependents." Since no account is taken of the age-limiting factor, the numerator sometimes relates to a population above a stated age while the denominator represents all ages. The effect of this discrepancy may be seen by comparing these percentages with corresponding age-limited values shown in Table 15.

Limitations: All of the limitations imposed by the varying definitions of the economically active population set forth above (p. 24) are applicable to data in this summary table. Comparability of the gross figures is affected by differences in the dates during the year when censuses have been taken. For example, seasonal employment in some countries, such as that of selected sectors of the population during holidays, migratory labour during harvest, and farm workers during the growing season, will be reflected in censuses taken at or near these dates. Such figures are not directly comparable with those taken during so-called "normal" periods. The heterogeneity of the structure of the economically active population is not readily seen from this table, except in so far as the age differences are concerned, but its effect should not be disregarded. Wherever possible, the lower age limit has been designated in a note at the end of the table.

Similar to all census tables, comparability of data in Table 14 is affected by the differences in the definition of the total population included and by the degree of completeness of the basic census count. For a discussion of these factors, see p. 7.

Table 15

The population stated to be in the labour force at each census between 1945 and 1954 has been classified by age in Table 15 and the corresponding age-specific percentages of economically active population computed. The age-sex composition of the labour force in each country may be seen from data in this table, and international comparisons may be made between corresponding age segments. Since age composition of a population has relevance to productive capacity, these data are important both for demographic and economic studies. This presentation marks the first time that detailed statistics of this type have appeared in the *Demographic Yearbook*, the previous table in the 1949-50 issue having included only 3 broad age groups.

The age categories shown in Table 15 are 16 in number, including under 15 years of age, 15-17, 18-19, 5-year age groups to 70-74, 75 and over, and unknown. This is more detailed than, but convertible to, the classification recommended by the Population Commission of the United Nations,[19] the purpose of which is to provide population 18 years and over.

Coverage: Because of the introduction of the age variable, the geographic coverage of this table is limited to 67

[19] Report of the Population Commission (Fourth Session), document E/1313. p. 23.

areas in contrast to the summary table, No. 14, which shows 102.

Per cent computation: Per cent active in this table is the number of persons (male or female) of specified age, reported as part of the economically active population, per 100 persons in the same age-sex group of the general population, active and inactive. Thus, the percentages are age-sex specific, measuring the ratio of producers to total persons in each age-sex group. The percentage that the economically active of all ages (as defined) forms of the "total" is in this table age-limited, that is, the percentage is computed by relating economically active over a minimum age to the total population over the same age limits.

Limitations: Comparability of economically active population is affected by the regular deficiencies in total population described above, namely underenumeration and differences in definition of the "total" in terms of armed forces, and so forth. Further, in terms of international comparability, census data suffer from being related to one date in time, not usually exactly comparable with those for other countries. Not only may the dates differ, but even similar dates may connote different seasonal structure of the working population. For example, in certain countries during "summer holidays," more persons of school age will be employed, and a census taken during that season will reflect this age composition. Consideration should be given to this factor in evaluating comparability.

Age distributions are also subject to several aberrations inherent in the methods of definition, reporting, collection, and tabulation—all of which have been described, together with a test of reporting accuracy, on p. 18 to p. 21.

The principal limitations on these data, however, are those imposed by the basic international differences in the concepts and definitions of the "labour force." These have been set forth at length beginning on p. 24. The only qualification which is eliminated here is the variation in the "legal" age of the working population, as reflected in the tabulation. Since data in this table are distributed by age, it would be possible to select a uniform age segment of the working population for comparative purposes. Segregation of the "15 and over" sub-total is a step in this direction.

Table 16

Table 16 presents the economically active population enumerated at censuses between 1945 and 1954, cross-classified by industry, status, and sex.

Unless otherwise noted, the population included is the modified present-in-area population within present territorial boundaries, and "economically active" is defined as all persons engaged or capable of being engaged in economic activities during a given period of time, including both employed and unemployed (see p. 24). Data are given separately for male, female, and both sexes combined. Industry refers to the branch of economic activity, and the classification is based on the type of establishment in which the individual is employed. Except for a slight modification of the wording of the residual category, the 9-division classification set forth in Table 16 is that of the International Standard Industrial Classification of All Economic Activities adopted by the Statistical Commission.[20]

Unless otherwise indicated, unemployed persons who have previous work experience are classified according to their previous industry group, while those seeking work for the first time are placed in the industry-not-classifiable category, Division 9. Deviations from the Classification are shown by brackets or described in footnotes.

The status classification is that recommended by the Population and Statistical Commissions and consists of 5 categories, as follows: (1) employers, (2) own-account workers, (3) salaried employees and wage earners, (4) unpaid family workers, and (5) status not classifiable elsewhere. Unemployed persons with previous employment are assumed to be classified according to their previous "status," unless otherwise noted, and persons seeking work for the first time are included in the residual status-not-classifiable category. For convenience, the number of these unemployed persons is given in footnotes when known. National deviations from the basic categories of the status classification are shown by means of new run-in box-heads carrying the revised or combined category applicable to data for that country.

Coverage: Table 16 presents the economically active population cross-classified by industry, status and sex for 80 geographic units. Although this is the most comprehensive coverage of economic structure of population published in the *Demographic Yearbook,* it is not quite so large as may at first appear, because 12 of the distributions are only marginal totals by industry and by status separately. Distributions showing industry or status alone were excluded.

National data are shown wherever possible; a subnational distribution is shown only as an alternative.

Limitations: The special limitations on comparability resulting from differences in the definition of economically active population, including variations of the minimum age, have been set forth in detail above. These are also the sources of variation in the data shown in Table 16.

In addition, comparability is impaired by the differences in the definition of the various status and industry groups. In some countries, directors and managers are grouped with employers and not with salaried employees. Unpaid family workers are often not classified separately, and it is not known with what categories they are combined. A woman who is a partner in a family enterprise may be classified in one country as an unpaid family worker, while in another she will be counted as an employer or a worker on own account. The same problem of demarcation arises in distinguishing employers from workers on own account. Unemployed persons may be classified by status or placed in the residual category. To assist in evaluating the status-definition factor, omissions and differences in classification are indicated in the table wherever available information would permit.

Variations in the definition of the industry categories are not so important, inasmuch as the Standard Industrial Classification spells out the divisional inclusions. Some variations do exist, however, because all countries have not adopted the Standard Classification. Data for these

[20] Report of the Statistical Commission (Third Session), document E/795/Add.1.

countries have been adjusted to the standard wherever feasible, and the deviations shown in footnotes.

The different definitions used for the "total" population and the completeness of the basic count, both of which were discussed on p. 7, are other factors to be considered in evaluating comparability.

The effect of different minimum ages in the definition of economically active population are especially important in connexion with Table 16. The specific limits are mentioned in footnotes when known, but it is impossible to adjust for them unless data are available classified by industry, status and age—a very complex tabulation not readily available.

5. Fertility

Tables 17 and 18

Statistics of female population 15 years of age and over, classified according to the number of live-born children reported to have been borne and, separately, by the number of children reported as still living at the time of the census, are presented in Tables 17 and 18. These are statistics from censuses of population taken between 1945 and 1954. They relate, unless otherwise noted, to the modified present-in-area population of the countries within present territorial boundaries.

In these tables, age, which refers to completed years, is classified in 5-year groups from 15 to 49 with a terminal group of 50 years and over. Number of children reported is given as 0, 1, 2, 3, 4, 5, 6-10, 11 and over, and unknown. Deviations from these classifications are shown in the table. For analytical purposes it would be more desirable to show age-groups up to 75 and over and number of children separately up to 9 and in groups of 5 to 20 and over[21] but the needed detail was not available in a sufficient number of cases.

In addition to the female population by number of children borne and living, Tables 17 and 18 show the total (aggregate) number of children reported by the women in each age group, and the ratio of these children per 1,000 women in each group.

Coverage: Table 17 includes data for 57 geographic areas and Table 18 for 22 countries. These are national data, statistics for the major part of the population or distributions for small segments of the population.

[21] Report of the Population Commission (Fourth Session), document E/1313. p. 22.

Rate computation: Rates are the number of children reported to have been borne by women in each age group per 1,000 total women. Thus, for purposes of the computation, it is assumed that women who report "number of children unknown" are equivalent to those reporting zero children.

Limitations: International comparability of these data is somewhat limited by variations among countries in the groups of women to which these statistics refer. Data are defined as relating to all female population, 15 years of age and over. In some cases, however, they are for all women who have ever been married; in other cases they refer to women who have borne children, that is, "mothers"; in still other cases, the data are said to relate to women reported as "married." Some of these variations introduce a secondary difference in the base data, in that "married women" may report "legitimate" offspring only. In still other cases, stillborn issue may be included. These variations are noted in the tables.

There is also considerable variation in the proportion of women concerned for whom the number of children is not stated. As noted above, these variations particularly affect the ratios of children to women, shown in the last column of the table, because of the assumption inherent in the data that "children not stated" is equivalent to 0 children. Consequently, except for comparisons between areas where the group of women covered is the same, and where "unknowns" are unimportant, the rates cannot be used for international comparisons of levels of fertility. They can, however, be utilized for comparisons of general trends or of relative differences between age groups.

In interpreting the data, it should be borne in mind that the number of children reported by older women in some countries is believed to fall short of the true figure. Stillbirths (where these are included in the statistics) and children who died soon after birth are especially likely to be omitted. The ratio between children ever born and children living, for countries where both types of data are available, is particularly affected by such omissions. In fact, unusually large differences may be taken as evidence of this sort of omission.

In addition to the special limitations in comparability which arise from the nature of these data, they are subject too to under- or over-enumeration and, to some extent, to differences in definition of total population. Both of these factors have been discussed on p. 7.

The inaccuracies in age reporting described and evaluated on p. 19 are also important in relation to the data in Tables 17 and 18.

PART B — VITAL STATISTICS

SOURCES OF VARIATION

1. Coverage — geographic and ethnic

For purposes of the *Demographic Yearbook,* vital statistics, which are presented in Tables 19-31, have been limited to statistics of live birth, death, stillbirth (late foetal death), marriage, and divorce. This is in accord with Principle 201 of the United Nations *Principles for a Vital Statistics System*[1] which defines the field of vital statistics as encompassing these, as well as statistics of early and intermediate foetal deaths, adoptions, legitimations, recognitions, annulments, and legal separations.

[1] United Nations, Statistical Office. *Principles for a Vital Statistics System.* Statistical Papers, Series M, No. 19, New York, August 1953, 28 p.

The *Principles* referred to above are recommendations for the improvement and standardization of vital statistics, adopted by the United Nations Statistical Commission at its seventh session in February 1953. They were subsequently approved by the Economic and Social Council at its fifteenth session in April 1953 under a Resolution [469 D (XV)] which suggests, *inter alia,* that "governments review and appraise their procedures for registering vital events and compiling vital statistics, taking into consideration the *Principles for a Vital Statistics System,* and introduce such changes as are feasible to improve national statistics and their international comparability in the field."

Despite the fact that live births, deaths, foetal deaths, marriages and divorces have been recommended by the United Nations as meriting priority in registration and reporting, the availability of statistics on these events varies widely. This is due in part to differences in the coverage of national legislation. In some areas, registration is not compulsory for all of the five events; in others, it is compulsory for only a part of the population (e.g., "European," "civilized" or "non-indigenous" population in certain African territories). In other countries, such as India and Pakistan, there is no compulsory provision for registration on a national basis, but only municipal or state ordinances which do not cover the entire geographic area. Still other countries (e.g., Gold Coast) have developed "registration areas" which comprise only a part of the country, the remainder being excluded for reasons of inaccessibility or because of economic and cultural considerations that make regular registration a practical impossibility. An examination of the tables will show that the coverage for Africa is particularly spotty, being confined largely to data for the "European" population with, as a rule, only a few partial statistics for the indigenous segments. Similarly, the coverage is uneven and the statistics incomplete for much of Asia and parts of Latin America.

These variations in the applicability of the compulsory registration provision are not in accord with the United Nations recommendation[2] which reads as follows:

> (*a*) In accordance with priorities established under Principle 201, registration of every vital event occurring within the boundaries of the country should be made legally compulsory for every group of the population and parallel provision for enforcement should be established.
>
> (*b*) Supplementary arrangements on a non-compulsory basis for registration of events among national residents who are temporarily abroad may be provided at the national level.
>
> (*c*) The efficiency with which these provisions operate or may be presumed to operate should not be a factor in their establishment.

Experience has shown that, despite the manifest difficulties of establishing current registration, and the unreliability of the data reported, it is only with the initiation of the obligation to register that improvement begins to occur. Voluntary registration has never produced complete registration.

2. Completeness of data

In addition to the variations which arise as a result of lack of uniformity in national legal provisions for registration, there are also differences in the effectiveness with which similar laws operate in the various countries. The manner in which the law is implemented and the degree to which the public complies with the legislation determine the completeness and accuracy of the statistics obtained from the civil registers.

Quality Code

Although deficiencies in the statistics are often fairly obvious on inspection, such evaluations would of necessity tend to be subjective when based only on the tabulated series. To obtain more basic information on this point, the questionnaires by which the United Nations obtains the data presented in the *Demographic Yearbook* include not only requests for statistics but also enquiries as to the completeness and accuracy of the data returned.

On the basis of the replies, and in the light of the results of a search of relevant official publications, it has been possible to classify national vital statistics into three broad categories: (1) those stated to represent a complete, or virtually complete, coverage of the events occurring each year; these are coded "C"; (2) those stated to represent incomplete coverage or to be subject to considerable irregularity of registration, which are coded "U"; and (3) those concerning which no information is available, for which the symbol of three dots "..." is used. The results of this classification appear in the first column of the trend tables 19, 25, 28, 30 and 31 which show for live births, deaths, infant deaths, marriages, and divorces total frequencies and rates.

Applicability: Despite the fact that the code is presented only in connexion with the trend tables, it is applicable within limits mentioned below to recent vital statistics for the country in question wherever they may be found in the *Yearbook*. Thus, in using data from Tables 19-31, reference should be made to the quality code before any comparisons or analyses are attempted. In the case of the life-table functions in Table 32, adjustments have usually been made for deficiencies in the basic data.

Strictly speaking, the reliability code relates specifically to the vital statistics and not to the population base used in the computation of the rates. However, it should be pointed out that the accuracy of the two components of the rate is interrelated, particularly where vital statistics have been utilized in the preparation of the population estimates. A fuller evaluation of the rates may be made by referring also to the "type" code on the population estimates presented in Table 1.

It is important to remember also that, although in a number of cases the statistics maintain a high degree of accuracy throughout the period covered, in general, the code is consistently applicable only to recent data. In the early years, many of the series were considerably less reliable than the code implies. When a country has specifically evaluated this situation, a footnote has been appended to qualify the code. Such notes will be found for the Dominican Republic, Poland, and Yugoslavia.

Information on the quality of the vital statistics is lacking for a considerable number of areas, but it is safe to assume that, for many of these, the reliability is open to serious question. The symbol of three dots (...) appearing

[2] *Ibid.* Principle 203.

in the code column ought, therefore, be taken as a warning that the accompanying data should be approached with caution. An examination of the computed or implied rates for these areas will indicate the cases for which a presumption of incompleteness is probably justified. However, this only applies where the data are markedly deficient. It should be remembered that knowledge of "expected" levels of fertility, mortality, and nuptiality is extremely scanty for many parts of the world and that borderline cases, which are the most difficult to appraise, are frequent.

Improvement in the coverage of vital events through improved registration completeness is a limiting factor to comparability over time. Such improvement tends to mask actual trends in the incidence of birth, death, or marriage. For example, a steadily rising crude birth or crude death rate is quite likely to indicate improvement in completeness rather than a rise in fertility or mortality. Rising stillbirth ratios are also likely to indicate improved registration. Furthermore, temporary measures, such as the removal of registration fees in order to encourage compliance may cause the numbers to rise sharply in certain years. Where tabulations include delayed registrations, the fluctuations may be particularly violent. When factors of this type are known to be operating, they are noted in the tables. As the information given in the code columns and in the footnotes makes clear, some of the material presented in the tables is useful, not as a measure of actual levels and changes, but rather as an indicator of where registration systems have been established and as a record of progress toward registration of all vital events.

Limitations: The way in which the classification with respect to reliability was made did not permit the application of uniform, objective criteria. In many cases, the basis for the country's own evaluation of the data was not given. Nevertheless, it was felt that under the circumstances national statistical offices were in the best position to judge the quality of their data and that even the very broad categories that could be established would be useful in furnishing some indication of the validity of the statistics presented in this *Yearbook*. It is recognized that the two-category code of "C" and "U" is too rough and the range within each category too broad. Moreover, by definition the code in its present form is interpretable only in relation to data tabulated by date of occurrence (see below). Date-of-registration tabulation automatically cancels the applicability of the code, inasmuch as the symbols are designed to indicate complete or incomplete registration of those events which have occurred during the year.

To provide a better basis for classification, more objective evaluation on the part of national governments is specifically recommended in Principle 106 of the *Principles for a Vital Statistics System*,[3] which reads as follows:

106. Critical evaluation of the vital statistics system

(*a*) As a supplement to co-ordination, responsibility for the establishment and execution of methods for critical evaluation of the vital statistics system should be vested in a designated authority.

(*b*) The elements of the evaluation programmes will vary in detail according to the degree of development of the system, but should include at some stage intensive studies of the degree of completeness of registration and of statistical reporting of events, with a view to evaluating the quantitative accuracy of vital statistics; analysis of the completeness and accuracy with which items of information relating to an event are recorded; determination of the success with which the tabulation programme meets the needs of consumers in terms of timeliness, adequacy and quality of statistics, and the general efficiency with which the system operates.

It is hoped that, as countries implement this Principle, further progress can be made toward a more uniform and detailed appraisal of these data.

3. Tabulation procedures

Present-in-area population

As indicated previously, and in accordance with part (*c*) of Principle 409,[4] vital statistics shown in this *Yearbook* relate to the *de facto* or present-in-area population, and footnotes are used to show deviations from this concept. The only exceptions to this footnoting rule occur in Tables 25, 26 and 27 in which the disposition of the deaths among the armed forces is explained in so far as possible, irrespective of whether such disposition is or is not a deviation from the present-in-area concept. Thus, unless otherwise noted, all vital statistics tables include events occurring within the present boundaries of the geographic areas shown and among all segments of the population.

The need for distinguishing for national purposes between statistics for areas or peoples where registration is moderately complete and those in which it is incomplete has been recognized in Principles 402 and 403.[5] These Principles recommend the establishment of "tabulation areas" as well as separate and perhaps less detailed tabulations for important population groups in which registration is incomplete or the quantity or quality of original data very deficient. "Tabulation areas" are defined as "geographic areas which meet certain national criteria for completeness of registration and data coverage, and on which, therefore, national tabulations are based".

In line with these *Principles*, statistics for some countries regularly exclude data for a segment of the population in which registration, though compulsory, is not even moderately complete, or for which the statistics are not reliable. Countries which follow this procedure include among others Panama and Venezuela, where vital statistics exclude data for the tribal Indian population; Peru, whose jungle population is excluded; British Guiana, Surinam, Taiwan, and Australia, where statistics for aborigines are not included. These cases, as well as others where the geographic area or population covered by the statistics is less than the entire country, are noted in the tables.

Tabulation by date of occurrence

In so far as possible, the data presented in these tables refer to events which occurred during the specified year

[3] *Ibid.*

[4] (*c*) Tabulation of data for the national territory should relate in general to data on events occurring within the national boundaries, although under certain circumstances, as for example during war years, provision may need to be made for including in the national tabulations data for deaths among the armed forces stationed outside the national boundaries.

[5] *Principles for a Vital Statistics System, op. cit.*

rather than to events which were registered during the period. This is in accord with the Principle[6] on this subject which states:

> *408. Tabulation by date of occurrence or date of registration*
>
> (*a*) Final tabulations for any calendar period should be based on events which occurred during that period and not on those registered. Should it be administratively necessary to tabulate final figures by "date of registration" rather than "date of occurrence", evaluation studies should be made to determine the degree to which tabulations by date of registration approximate those by date of occurrence, and it is desirable that the analyses of this relationship be published.

However, it will be noted that a considerable number of countries (see below) tabulate their statistics not by date of occurrence but by date of registration. Such statistics can be misleading.

If registration is prompt, the difference between statistics tabulated by the two methods might be negligible. But if delayed registration exists to any substantial degree, vital statistics by date of registration will not produce internationally comparable data because delayed registrations will be counted in statistics for the year when the events were reported, rather than in the year when they occurred. Moreover, within one country, if the numbers of events registered from year to year fluctuate widely (due to *ad hoc* incentives or inducements provided to stimulate registration, or to the need for proof of birth or death to meet certain requirements), vital statistics tabulated by date of registration will not provide indices of the number of vital events that actually occurred during the specified year. Statistics of "registrations" always include events which occurred in the preceding year and often, especially in countries with less well-developed vital-statistics systems, those which occurred many years previously.

It should also be pointed out that the time allowed for the registration of a vital event differs markedly from country to country. Thus, even where delayed registration does not exist, tabulating by date of registration could not produce statistics which are strictly comparable with those for other areas. A brief examination of the differences between countries in the time allowed for registration of the vital events will suffice to illustrate this latter point, especially in light of the fact that all registrations are not made within the legal period.

The time allowed by law for the current registration of a live birth varies from 1 day (24 hours) in some heavily populated areas of the United States of America to 62 days in New Zealand, 90 days in parts of Brazil distant from a registration office, and one year in Cuba. Deaths are registrable within 24 hours in most countries, but the period varies, reaching 30 days in New South Wales and Queensland, Australia. Marriages are most often registered as part of the ceremony, but in other cases, as much as 30 days is allowed. Divorces are registered as part of the records of the court concerned as soon as the decree is granted, but in countries where a secondary registration is also made in the civil register, there may be a considerable time lag. It will be clear that date-of-registration tabulation under such diverse circumstances could not produce comparable figures.

Symbol: In order that the user may be aware of this important source of distortion in the statistics, the countries known to tabulate vital statistics by date of registration are identified in the tables by a dagger symbol (†). Information is not available for all areas shown in the tables, but those for which basis of tabulation is known fall into two groups as follows:

Date-of-occurrence basis:

Albania
Austria
Belgium
Bolivia
Bulgaria
Burma
Canada
Costa Rica
Czechoslovakia
Denmark
Dominican Republic
England and Wales
Finland
France
Honduras
Hungary
Iceland
India
Indonesia
Iran
Italy
Jamaica
Japan
Jordan
Liechtenstein
Luxembourg
Maldive Islands
Monaco
Netherlands
Norway
Pakistan
Panama
Philippines
Poland
Portugal
Romania
Saar
San Marino
South Korea
Spain
Sweden
Switzerland
Union of South Africa
United States
Western Germany and West Berlin
Yugoslavia

Date-of-registration basis:

Argentina
Australia
Barbados
Bermuda
British Guiana
British Honduras
Ceuta
Ceylon
Chile
Colombia
Cook Islands
Cuba
Dominica
Ecuador
Egypt
El Salvador
Falkland Islands
Fiji Islands
Gold Coast
Guatemala
Greece
Hong Kong
Ireland (Republic)
Israel
Lebanon
Leeward Islands
Macau
Malta and Gozo
Mauritius
Melilla
Mexico
New Zealand
Nicaragua
North Borneo
Northern Ireland
Northern Rhodesia
Nyasaland
Paraguay
Peru
St. Vincent
Scotland
Singapore
Southern Rhodesia
South West Africa
Spanish Guinea
Syria
Taiwan
Thailand
Trinidad and Tobago
Uganda
Uruguay
Western Samoa
Venezuela

[6] *Ibid.*

For most areas not shown in either of the above lists, it seems probable that the data are on a date-of-registration basis. Where the areas involved are non-self-governing, it is likely that the procedures followed by the administering countries are also followed in the dependencies.

Applicability of symbol: It should be noted that this factor is particularly important in connexion with live-birth statistics where the legal registration periods vary widely and the actual time intervals between occurrence and registration even more. Nevertheless, the symbol (†) has been included on all vital statistics tables except that of divorce.

The qualification is less applicable to death statistics than to birth because the sanitary code, in most countries requires that deaths be registered in order to obtain a burial permit. This regulation tends to make registration prompt. The symbol is even less meaningful in relation to marriage statistics because in most countries, marriages are registered immediately as part of the ceremony or, at least, within a reasonably short period. It is least applicable to stillbirth statistics because of the need for a burial permit and because delayed registration of stillbirths is probably non-existent.

4. Statistical definition of events

Another source of variation—though a much less important one—lies in the statistical definition of vital events, especially of live birth, death, and stillbirth.

Prior to 1950, "stillbirths" were defined internationally[7] as follows:

> *A dead-birth is the birth of a foetus, after at least twenty-eight weeks pregnancy, in which pulmonary respiration does not occur; such a foetus may die either: (a) before, (b) during or (c) after birth, but before it has breathed.*

The uniform and definite criterion by which a stillbirth could be differentiated from other products of human gestation not yet at a stage of development where they could normally be expected to be capable of existence independent of the mother, was necessary to ensure the accuracy and comparability of stillbirth statistics, as distinct from statistics of "abortion" or "miscarriage". For accuracy and comparability of live-birth and death statistics, however, it is more important to establish a uniform and definite criterion differentiating statistically between stillbirths and live births.

In some countries, namely Spain, Cuba, Ecuador, and the Spanish possessions of Ceuta and Melilla, registration as a live birth requires that the child must have survived 24 hours. Infants who die before the expiration of the 24-hour-period are, therefore, classified as *abortos* and, failing special provisions, would not be counted statistically as either a live birth or as a death. Similarly, in several countries, those infants who are born alive but who die before registration of their birth irrespective of the age at death, are considered as "stillbirths" and are thus excluded from both the live-birth and the death register. In still other countries, such infants are registered as "deaths" but not as live births.

[7] League of Nations. Health Committee. *Report of the Committee Studying the Definition of Dead-Birth.* C.M.1925. C.224. M.80. Appendix 2, p. 78.

Unless special tabulation procedures are adopted in such cases, the live-birth and death statistics will both be deficient by the number of these infants, while the number of stillbirths is increased by the same amount. As a result, stillbirth ratios will be exaggerated and general birth and death rates understated to some degree. The infant mortality rate will also be affected, for although both components are deficient by the same absolute amount, the rate nevertheless tends to understate actual infant mortality. This is so because the deficiency is proportionately greater in relation to the number of infant deaths than it is in relation to the number of births.

Lack of comparability due to different statistical definitions is found also in statistics of marriage and divorce. Even though, as noted below, marriage and divorce are legal rather than biological events, the composition of the statistics can produce variation between countries. In some countries, statistics of legal marriage refer to religious ceremonies only; in others, they refer to civil marriages only; and in still others, both civil and religious ceremonies are considered legal marriages. Non-registered unions generally known as "consensual", "common law", "customary", and so forth, are automatically excluded in all countries but even so, non-comparability of statistics of marriage formation in the demographic sense may result because the proportion of such unions varies widely from country to country.

International recommendations

Problems of comparability stemming from these sources will be lessened as international standard definitions and classifications are adopted. Some progress in developing standards was made by the Expert Committee on Health Statistics of the World Health Organization which, in 1950, recommended uniform definitions of live birth, foetal death, and stillbirth for adoption by the various countries. This progress was carried still further and broadened to cover other vital events when the Economic and Social Council of the United Nations approved the *Principles for a Vital Statistics System,*[8] one of which sets forth standard definitions for statistical purposes of each event on which data may be collected by the registration method. This recommendation, which has as its aim the elimination of the lack of comparability mentioned above, reads in part as follows:

> 202. *Definition for statistical purposes of each event on which data may be collected by the registration method*
>
> (*a*) The definition of each event on which data are collected for vital statistics purposes should conform, in so far as possible, with the definitions for statistical purposes given in paragraph (*c*) below.
>
> (*b*) If a legal concept or definition in any country cannot be harmonized with these, provision should be made to report the events as defined below or in accordance with definitions which do not differ in principle from those below. If this is impossible, full description of divergencies should be given wherever statistics of these events appear.
>
> (*c*) The recommended statistical definitions are as follows:

[8] *Op. cit.*

(1) Live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached; each product of such a birth is considered live-born.

All live-born infants should be registered and counted as such irrespective of the period of gestation or whether alive or dead at time of registration, and if they die at any time following birth they should also be registered and counted as deaths.

(2) Death is the permanent disappearance of all evidence of life at any time after live birth has taken place (post-natal cessation of vital functions without capability of resuscitation). This definition therefore excludes foetal deaths.

(3) Foetal death is death prior to the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such separation the foetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

(4) Stillbirth is defined as synonymous with late foetal death, that is, one of twenty-eight completed weeks of gestation or over.

(5) Marriage is the legal union of persons of opposite sex. The legality of the union may be established by civil, religious, or other means as recognized by the laws of each country; and irrespective of the type of marriage, each should be reported for vital statistics purposes.

(6) Divorce is a final legal dissolution of a marriage, that is, the separation of husband and wife by a judicial decree which confers on the parties the right to civil and/or religious remarriage, according to the laws of each country.

This Principle includes also recommendations for defining "adoption", "legitimation", "recognition", "annulment", and "legal separation", but since statistics on these events are not presented in the *Yearbook,* the definitions are not included here. There can be no doubt but that adoption of the recommended definitions will go a long way toward eliminating the variations from this source now present in the tables.

DESCRIPTION OF TABLES

1. Live-birth statistics

Because this issue of the *Yearbook* is devoted to population-census statistics, the subject coverage for vital statistics has been restricted to basic data for which continuity is required each year. Tables 19-23 present statistics of live birth. Unless otherwise noted, stillbirths or other foetal deaths are excluded from these data, illegitimate live births are included, and each member of a multiple birth is counted separately.

In general, the data presented relate to live births which occurred within the present boundaries of the given country and among the present-in-area population. Therefore, they may be presumed to include births among nomadic tribes and aborigines and those to displaced persons, war refugees, and aliens residing in the country at the time the birth occurred. Unless otherwise noted, they may be assumed to exclude births to residents of the area, which occur in other countries.

Deficiencies in vital statistics as a whole have been reviewed above where reference was made to the evaluation-of-quality code, to the effect of tabulating by date of registration rather than by date of occurrence, to the influence of varying definitions of vital events, and so forth. One additional source of incompleteness exists for live-birth statistics. This is the tendency in all countries, irrespective of their definition of stillbirth, to fail to include in the live-birth register some of the infants who, though born alive, die before registration of birth.

In most countries, the registrar is required by regulation to ascertain that for every infant-death registration there exists a corresponding live-birth registration. However, this regulation is sometimes legally limited in its application as, for example, in Chile where the registrar is obliged to verify the birth registration only if the infant whose death is being recorded is under 30 days of age.

Whether by regulation or by default, some laxness in applying the regulation undoubtedly exists in all countries, especially for infant deaths at ages over one month. It is likely, therefore, that some live births will aways fail to be registered in almost every country. In some cases, these infants may be considered as "stillbirths" and registered as such if stillbirth registration is provided, in which cases the statistics of live birth and of death will be deficient and the statistics of stillbirth inflated. In other cases, these unregistered live births will enter the death register but fail to be considered also as live births. In either case, the qualification should be kept in mind in using live-birth statistics, especially those for countries which provide a long period during which registration may be effected.

Table 19

This table presents new and revised data on the trend of live births and crude birth rates from 1946 to 1954, and corresponding 5-year annual average rates for the period 1920-34.

Coverage: Statistics for a total of 172 geographic units are presented—the most extensive coverage of the birth-statistics tables. Major areas, even though lacking recent data, are included, and data for segments of the population are presented when statistics are not available for the country as a whole.

It will be noted, however, that geographic coverage has been limited somewhat by the necessity of providing not only absolute figures, but rates as well. The computation of rates limits the inclusions to frequencies of predetermined size (generally 15 or more) and to those areas for which corresponding population data are available.

Rate computation: The annual crude rates shown in Table 19 are the number of live births per 1 000 persons in the population estimated at the mid-point of the year or, in a minor number of cases, in the population at the date of the census or at some other point during the year. The five-year average rates are the sum of the live births in the period per 1 000 of the sum of the midyear populations for the period.

In general, the population totals on which rates in this table are based are the official figures presented in Table 3. Reference may be made to that table for a definition of the type of population which constitutes the denominator of the rates.

Limitations: In addition to the number of live births reported to have occurred in 172 geographic units of the world, Table 19 presents a quality-of-data evaluation which appears in the first column of the table in the form of a code "C", "U" or ". . .". The elements of the code and its interpretation have been described in detail on page 28 above. Wherever precise measures have been made available by the countries, the completeness or incompleteness of registration has been set forth in terms of percentages.

In using data from this table, care must be taken to consider also the effects of tabulation by date of registration rather than by date of occurrence. Countries which are known to have adopted this basis of tabulation are marked in the table with a dagger (†). Whenever the lag between occurrence and registration is prolonged, i.e., where a large proportion of live-birth registrations are "delayed"—as in some parts of Latin America, Asia, and Africa—live-birth statistics by date of registration may give a very distorted or even wholly erroneous picture of natality trends.

This qualification is particularly applicable in evaluating the meaning of the quality code. Data tabulated by date of registration may often present values and rates of credible magnitude even though the basic statistics are known to be incomplete. In such cases, incompleteness on an annual basis is masked by the inclusion of events which occurred in previous years, and the resulting data may be misleading.

Irrespective of their limitations, crude birth rates do provide a measure of gross additions to the population through natality. But, because of differences between countries in the age and sex composition of the population, crude rates do not reflect very precisely differences in the frequency of births among population at the reproductive ages. They give only a general idea of trends over time and of differences between countries in levels of natality.

Table 20

Live births by age of mother are given in Table 20. The age classification begins with an "under-15-year" category and continues through quinquennial groups to 49, "50 and over" and "unknown". "Age" in this as in other tables showing this characteristic is defined as "age at last birthday" or "completed years".

Coverage: The latest available distribution—either new or revised — is included in the table for each of the 88 geographic areas, even though the year to which data relate is not a current one. Thus, the table may serve as an index to those geographic areas which tabulate live births by age of mother and, in addition, it may give some indication of the timeliness of the statistics.

Limitations: Data in this table are subject to the limitations implied by the code of completeness, "C" or "U", which was described in connexion with vital statistics in general and which appears in Table 19. Comparability is also affected by differences in the basis of tabulation, i.e., date of occurrence or date of registration. The dagger (†) in the stub indicates the countries which tabulate by date of registration, the implications of which have been set forth above.

Because these are statistics classified according to age, they are subject to the limitations with respect to accuracy of reported ages similar to those already discussed in connexion with population by age and sex. The absence of frequencies in the "unknown" age group does not necessarily indicate completely accurate reporting and tabulation of the age item. It is often an indication that the "unknowns" have been eliminated by assigning ages before tabulation, or by proportionate distribution after tabulation. On the other hand, large frequencies in the unknown-age category may indicate the inclusion of illegitimate births, for which the data on birth records are rarely complete.

One other factor must also be kept in mind in using these data. This is the variation which may result in data for countries which calculate age of mother at birth of child (or at registration) using the exact dates, i.e., day, month, and year, and for those which use the year alone. Information on this factor is given in footnotes when known.

Lack of strict comparability, both among data for different countries shown in this table, and between those shown here and in Table 19, is due to a variety of causes. In certain instances, data by age refer to deliveries or confinements rather than to live births; moreover, in some cases the confinements referred to are those resulting in live birth only and in others to those resulting in live-born or stillborn offspring. Other countries restrict tabulations by age of mother to legitimate births only, while totals of live births in Table 19 relate to all births, i.e., legitimate and illegitimate. In most cases, this limitation qualifies the data very little, but where illegitimate births are relatively numerous, data limited to legitimate births cannot be taken as representative. Similarly, for a few countries, the distribution of live births by age of mother is confined to infants born alive who did *not* die before registration of birth, whereas the totals in Table 19, include those who died before registration.

Table 21

Table 21 presents live-birth rates specific for age of mother in 61 areas for the latest available year. Rates are shown for "under 15 years", for 5-year age groups between 15-19 and 40-45, and for the group 45 years and over. The consolidation for rate computation of the two groups "45 to 49" and "50 and over" shown separately in Table 20 is made because of the small frequencies in the two categories.

Coverage: Compared to Table 20, the geographic coverage of this table is seriously limited by the lack of population data tabulated in corresponding age-sex categories. Live births tabulated by age of mother in accordance with recommendations of the United Nations[9] are

[9] *Principles for a Vital Statistics System, op. cit.* Principle 410e (5).

available in Table 20 for 88 geographic areas, at varying time periods. The appropriate female populations by age was available for only 61 of these. These populations included censuses or estimates constructed upon census data adjusted by vital and migration statistics. Distributions estimated by applying the percentages by age at the time of the census were not used.

Another coverage limiting factor is the omission from the rate table of any area for which the frequency in unknown age exceeded ten per cent of the total live births. Still a third is the omission of series for which the sum of individual age-group frequencies was less than 50.

Rate computation: Rates are computed from the corresponding live-birth statistics presented in Table 20, and from female population classified by age available at the census or in estimates. The populations used in the computation of the age-specific rates are those which appear in Table 10 or the corresponding table shown in previous issues of the *Yearbook*.

In computing age-specific rates, births to mother of unknown age have been distributed proportionately among births to mothers of known age.[10] Thus, except for the initial and terminal age groups, rates are the number of live births to mothers in a specified age group (adjusted to include a proportion of the unknowns) per 1 000 women of that age group.

Since only a negligible fraction of all births occur among women under 10 or over 50 years of age, births to mothers under 15 years of age and to those 45 years of age and over are related to female population aged 10 to 14 and to that 45 to 49 respectively. Population of unknown age does not enter the computation at any point because the birth rate for "all ages" is an age-limited one, based on births at all ages but computed on a female population aged 10 to 49 years only. For this same reason, the rate for all ages cannot correspond to the total crude rate shown in Table 19 but, wherever the statistics are similarly defined, it will agree with the age-limited rate for total births shown in Table 23.

Limitations: The rates shown in this table are subject to the same limitations as the corresponding frequencies in Table 20. Comparability is affected by the "completeness" of the base data, by the method of calculating age and by the differences in the basis of tabulation. The effect of including delayed birth registrations in the age-of-mother tabulations may be seen in connexion with rates specific for age in Chile, Peru, and Taiwan, for example. In these and other countries, the high rates at ages 45 and over may well be the result of recording the age of mother at the time of registration, rather than at the time of birth of child.

Table 22

This table presents live births by live-birth order for the latest year for which data are available in the Statistical Office. Live-birth orders from the first to the ninth are shown separately; the tenth and higher are grouped together, and there is an unknown category.

Coverage: Since this type of tabulation—though basic—is more complicated than that by "age of mother", naturally fewer countries have prepared their data in the desired form. A total of 64 countries are represented by one year's experience—a geographic coverage markedly less than the age-of-mother table, No. 20.

Limitations: As was the case in Table 20, internal comparability of these data is limited by differences in the treatment of illegitimate births, multiple births and stillbirths. The principal limiting factor, however, is the method used for establishing live-birth order.

The international recommendation included in the *Principles for a Vital Statistics System*[11] is that live births should be cross-classified by age of mother and live-birth order and that, for this purpose, live-birth order should be defined as "the numerical order of the child (the report of whose birth is being tabulated) in relation to all previous live-born issue of the mother, irrespective of whether pregnancies were nuptial or extra-nuptial." Many countries follow this recommendation, tabulating live births and basing their calculations on the number of previous live births. This procedure is not universal, however. Some countries compute "birth order" on the "number of previous live births plus stillbirths"; still others use the number of confinements, including or excluding confinements resulting in stillbirths; in certain countries, parity is calculated on the basis of previous legitimate live births and/or stillbirths and, in some instances, on the basis of only those legitimate births that occurred during the existing marriage of the mother. Whenever such qualifications are known, they are set forth in the footnotes to the table.

In common with data in other birth tables, statistics by parity may be evaluated as to "completeness" by reference to the code which is part of Table 19. It should be noted, however, that unless the incompleteness of the data as a whole is very biased, the contour of the birth-order distribution for one country may still yield useful information.

Birth-order information is usually lacking for countries in which the lag between occurrence and registration is great. Therefore, the qualifications imposed by date-of-registration tabulation procedures can be ignored to a large extent.

Table 23

In Table 23, birth rates by live-birth order based on frequencies from Table 22 are set forth. By definition, data in this table relate to live births, and birth order is based on the number of previous live births to the mother.

Coverage: Table 23 includes rates for 43 countries and shows the latest data for each. It is less extensive in geographic coverage than Table 22 because of the prerequisite for rate computation of establishing strict correspondence between the numerator (births) and the denominator (population by age and sex). In addition, rates for a num-

[10] This method of distributing the unknown ages is open to some criticism because it is known that the age-of-mother distribution for legitimate births differs from that for illegitimate births and the proportion of "unknown ages" is higher among illegitimate births than it is among legitimate. A more accurate method of allocating the unknowns would be one which took cognizance of this fact, but the difficulty is that births by age of mother are not regularly tabulated also by legitimacy.

[11] *Op. cit.* Principle 410e (5).

ber of areas have not been computed because of the smallness of the frequencies when distributed into 10 or more classes.

Rate computation: Rates in this table are the number of live births in each birth order per 1 000 female population aged 10 to 49 years. They are not, therefore, specific for live-birth order because they are not computed on parity cohorts. Unknown birth order has not been distributed, but forms the basis for a rate. Therefore, the sum of the rates for individual birth orders and unknown gives the total age-limited rate for all births. Except where the definition of the statistics differs, this total rate agrees also with that shown for "all ages" in Table 21.

Since many of the series presented relate not to all live births but only to legitimate live births, it might have been desirable to compute rates for these on married female population of the selected age span. However, dependence on the more appropriate population base by age, sex and marital status would have restricted the coverage of the table markedly.

Limitations: The same factors which make for lack of comparability of the frequencies by birth order in Table 22, affect the birth-order rates.

Some countries limit tabulations to legitimate live births; others, to confinements resulting in live births only, or to those resulting in live births and stillbirths. As in the frequency table, however, the major factor limiting comparability is the method of calculating birth order which was discussed in connexion with Table 22.

Despite their limitations, data such as these permit study of those aspects of fertility which are associated with differences in frequency of marriage or in size of family. Such differences are reflected in the distribution of births among the various birth orders.

2. Stillbirth (late foetal death) statistics

Like statistics of live births and deaths, statistics of "stillbirths", which are presented in Table 24 only, relate to the present-in-area population within the current boundaries of the geographic units specified, and include new and revised data received in the Statistical Office.

Completeness of data: Stillbirth data more than any other are subject to severe limitations as regards completeness of coverage. Areas that are known to have generally deficient or irregular birth registration are indicated in Table 19, but many countries with relatively adequate statistics of live births and deaths may have quite inadequate stillbirth statistics. It would appear that, even with a highly efficient registration system, the proportion of stillbirths escaping registration is considerably larger than the corresponding birth and death omissions.

However, it is difficult to measure or estimate just how many of the total number are unregistered. Consequently, no precise information on completeness of coverage (similar to that which was devised for other tables) could be developed for stillbirths and, hence, no quality code appears in this table. Perhaps the most that can be said, in general, is that the coverage of stillbirths in countries where most confinements are medically attended is more complete than in others.

Definitions As noted previously (see p. 31), the comparability of stillbirth statistics is markedly affected not only by variations in completeness of coverage but also by differences in definition.

As has already been indicated, certain countries classify live-born infants dying shortly after birth ("within 24 hours", "immediately", "before registration as a live birth", etc.) as stillbirths. For clarity, these might be termed "pseudo-stillbirths". The relatively few countries that are known to follow these practices are noted in the tables.

A true stillbirth is generally understood to be the birth of a viable foetus that is dead at birth, or, in other words, a foetal death occurring late enough in pregnancy for there to have been a fair chance of survival.

Criteria of viability are usually based on the duration of pregnancy, measured in days, weeks, or months. The minimum period of gestation varies widely, ranging, according to available information, from 3 to 7 months. The interval most frequently specified as the minimum is 28 weeks. Some countries have an additional requirement that the foetus be a minimum length, the minimum specified ranging from 30 to 35 centimetres. In a number of cases, the only specification is simply that the foetus must be viable or that it must be recognizable as a human being. On the other hand, some countries do not consider viability but classify as stillbirths all foetuses which are reported to have been born dead.

Although full information on the definition of stillbirths could not be obtained for all the areas and years for which stillbirth data are shown in this volume, some information on current practices is available for most of the areas and is summarized below. It should be noted that this classification refers to the "viability" criteria only, that is, to those which distinguish stillbirths from abortions. It does not take cognizance of the other criteria included in most stillbirth definitions, namely the "signs of life" which distinguish stillbirths from live births.

I. Areas specifying a minimum period of gestation:

A. At least 28 weeks

Bolivia
Brazil
British Guiana
British Honduras
Canada
Canal Zone
Ceylon
Chile, beginning 1944
Costa Rica
Denmark
Dominican Republic
Ecuador, beginning 1945
El Salvador (or 7 mos.)
Federation of Malaya
Gold Coast
Honduras (or 7 mos.)
Iceland (6½ calendar months)
India (some States)
Netherlands, beginning 1950[12]
New Zealand
Norway
Paraguay
Peru
Poland (7 months)
Romania (6½ months)
Thailand
Trinidad and Tobago
United Kingdom:
England and Wales
Scotland
Yugoslavia (or 7 months)

[12] Data shown in this *Yearbook* are classified according to the definition in force before 1950: 26 weeks.

B. At least 26 weeks

Belgium (over 180 days)
Bulgaria (6 months)
Colombia (6 months)
Egypt (6 months)
Finland (6 months)
France (6 months)
Italy (6 months)
Liechtenstein (6 months)
Luxembourg (6 months)
Mauritius (6 months)
Netherlands, before 1950
Venezuela (6 months)

C. At least 20 weeks (or 5 months, as indicated)

Panama (5 months)
Philippines (5 months)
United States ("reached 20th week" for national compilations)

D. At least 3 months

Japan (over 3 months)

II. *Areas specifying a minimum length or weight:*

Austria (35 centimetres)
Czechoslovakia (over 400 grammes)
Germany: Federal Republic (35 centimetres)
Sweden (35 centimetres)
Switzerland (over 30 centimetres)

III. *Areas specifying that the foetus be viable or recognizable as a human being:*

Cuba (appearance)
Mexico (viable)
Portugal (appearance)
Southern Rhodesia (appearance)
South-West Africa (viable)
Union of South Africa (viable)

IV. *Areas without a definite criterion of viability:*

Angola
Cape Verde Islands
Channel Islands
Greece
India (some States)
Morocco (French)
Mozambique
Portuguese India
São Tomé and Principe
Spain
Zanzibar and Pemba

Where the period of gestation is expressed in months, it is sometimes intended that lunar months be understood, sometimes calendar months. It was not possible to determine for each case just which type of measure was used but, in the classification given above, it has been assumed that countries indicating 7 months refer to lunar months and, therefore, 28 weeks, while those indicating 6 months refer to calendar months, usually equated to 180 days or to 26 weeks.

Because of the heterogeneity in the definitions under which stillbirth statistics are compiled in different countries and in view of the need for data on total foetal wastage which cannot be obtained under any of the current definitions of stillbirth, the Expert Committee of the World Health Organization took the matter under advisement at its second session in 1950 and made certain recommendations[13] for the consideration of the World Health Assembly. First among these was the proposal that "foetal death", rather than "stillbirth" should be defined and that its definition should be the reverse of that for live birth. The foetal death definition, which was actually adopted by the World Health Assembly and later by the United Nations Economic and Social Council in the *Principles for a Vital Statistics System,*[14] reads as follows:

Foetal death is death prior to the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such separation the foetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

The Committee made several other proposals which were not adopted by the Assembly but which were referred to the various countries for further study. Among these proposals were the following:

. . .

(*b*) Tabulation of all foetal deaths is a desirable goal and should be attained as soon as possible.

(*c*) As a minimum all countries should register and tabulate all foetal deaths occurring after the 28th completed week of gestation.

(*d*) The following groups should be used in tabulations of foetal deaths:

Less than 20 completed weeks of gestation . . . . . Group I

20 completed weeks of gestation but less than 28 . . . . . Group II

28 completed weeks of gestation and over . . . . . Group III

Gestation period not classifiable in groups I, II, and III . . . . . Group IV

(The period of gestation is measured from the beginning of the last menstruation)

Foetal deaths, group I, may also be described as "early foetal deaths".

Foetal deaths, group II, may also be described as "intermediate foetal deaths".

Foetal deaths, group III, may also be described as "late foetal deaths".

. . .

(*g*) The term "stillbirth" when used in the statistics of any country should be synonymous with group III (late foetal deaths).

It was realized that the term "stillbirth" would of necessity continue to be used by many countries for some time.

. . .

Up to the present time, no country has reported statistics of all foetal deaths, although it is known that at least 14 countries have adopted the new definition—either wholly or with slight modifications. Until such time as data reported by countries reflect the new definition and include all foetal deaths, the *Demographic Yearbook* table will continue to present "late foetal deaths" or "stillbirths".

Table 24

Table 24 is the trend table which shows the number of stillbirths (late foetal deaths), together with stillbirth ratios, for the period 1946-54.

---

[13] World Health Organization. Expert Committee on Health Statistics. Report on the Second Session. *Technical Report Series No. 25.* Geneva, October 1950.

[14] *Op. cit.* Principle 202.

Coverage: The coverage of this table, 129 geographic areas, is limited only by the policy of restricting rates to frequencies of 15 or more. Thus, a few potential areas are not included because of the smallness of the numbers involved.

The restrictions imposed on coverage by the need to achieve strict correspondence between the numerator and denominator of the ratio is not so effective in this instance, because the ratios are computed in relation to the number of live births rather than population estimates. It is generally true that if stillbirth statistics are available, live-birth figures will also be at hand.

Computation of ratios: The ratios shown in the table are the numbers of stillbirths reported per 1 000 live births in the same period, rather than per 1 000 of the combined total of live births and stillbirths. This method of computation is adopted in view of the variability in the completeness of reporting of stillbirths and the comparative stability of the reporting of live births from year to year.

All ratios have been computed in the Statistical Office of the United Nations on live births shown in Table 19, except in the case of Ceylon where official stillbirth ratios were used in the absence of recorded live births for the "Proclaimed Areas".

Limitations: All the limitations described on p. 35 are applicable to data in this table, although it is sometimes difficult to identify incompleteness of stillbirth registration from inspection of the ratios alone. Stillbirths are incompletely registered in most countries of the world, but when stillbirths and live births are both under-registered, the resulting ratios may be of reasonable magnitude. As a matter of fact, for the countries where live-birth registration is poorest, the ratios may be the largest, effectively masking the incompleteness of the base data. For this reason, variations in live-birth-registration completeness must always be borne in mind in evaluating stillbirth ratios.

In addition to the indirect effect of live-birth under-registration, stillbirth ratios may be seriously affected by differences in tabulation procedures. Stillbirth frequencies are not affected but the ratios, as noted above, are computed on live births and the incidence of these may be distorted by date-of-registration tabulation. When the annual number of live births registered and reported fluctuates over a wide range due to changes in legislation or to special needs for proof of birth on the part of large segments of the population, then the stillbirth ratios will fluctuate also, but inversely. Because of these effects, data for countries known to tabulate live births by date of registration should be used with caution unless it is also known that the tabulations of live-births by date of registration approximate those by date of occurrence.

3. Death statistics

Statistics of mortality are presented in Tables 25-29. As in the case of births, these statistics—which include revisions and new data—do not represent a uniform degree of accuracy or completeness of registration.

The data presented relate to deaths which occurred in the population present within the current boundaries of the given country. Therefore, unless otherwise specified, they may be presumed to include deaths among nomadic tribes and aborigines and those among national or alien armed forces, displaced persons, war refugees, and aliens residing in the country at the time when death occurred. They normally exclude deaths among armed forces and civilian nationals stationed or residing outside the country. It should be emphasized that the absence of qualifying notes about inclusions or exclusions does not necessarily mean that the data conform to the standard definition. However, specific information is given for virtually all cases where the difference involved is other than negligible.

The figures exclude stillbirths except in a few cases noted in the tables and in these the presumption seemed warranted that the number of stillbirths included was too small to invalidate the data.

Deaths of infants who, though born alive, died before registration of birth or before 24 hours of age, are excluded from the totals for certain countries because of the operation of the statistical definition of live birth and stillbirth discussed above. This exclusion is potentially an important one, inasmuch as deaths up to three days after birth (a period at which mortality tends to be high) may thus escape registration and counting.

Because under-registration of deaths is more difficult to detect or measure than under-registration of births, the quality-of-data code columns in the tables presenting total mortality and infant mortality (Tables 25 and 28) contain more "unknowns" (. . .) than does that in the table of birth statistics. It is generally believed that deaths are more completely registered than births, but this may not be the case everywhere. In fact, evidence is beginning to accumulate which suggests that, in some areas and under certain conditions, births may be more fully registered than deaths.

The tables have been carefully cross-checked and discrepancies in numbers or rates are in most cases explained in footnotes or otherwise accounted for. Differences which could not be explained are indicated in footnotes, except where they are very small and involve only 1 or 2 deaths. Discrepancies not noted in the rate tables include those resulting from the use of different populations for the same year (e.g., the midyear population for crude rates and the population at the census date for the age-specific rates). These differences are very small, seldom amounting to as much as one unit in the decimal place.

Table 25

This table presents the number of deaths which occurred each year 1946-1954 and crude death rates for 1920 to 1934 and 1946 to 1954. The period 1920 to 1934 is represented by five-year averages, while for 1946 to 1954, annual rates have been computed.

Unless otherwise indicated, the data refer to the deaths within the present geographic boundaries of the country and within the present-in-area population. However, it will be noted that this table carries a number of footnotes specifying for war years the disposition of deaths among armed forces, both national and alien, and of civilian war casualties wherever such information is available. This procedure has been followed irrespective of whether the disposition constitutes a deviation from the present-in-area concept because of the general uncertainty surrounding

this problem. Specification of the disposition when it could be ascertained, is considered desirable inasmuch as inclusion or exclusion of deaths among armed forces may affect the crude death rate by as much as one point.

Coverage: There are 171 geographic areas shown in Table 25. This coverage excludes a few areas for which small (less than 15) frequencies were available. However, the geographic coverage implied by these areas is somewhat more than is actually present because, in a number of cases, the statistics are confined to the non-indigenous segments of the population. As a consequence, the data for some regions, particularly for the continent of Africa, are of only minor significance.

Rate computation: Crude annual rates shown in this table are the number of deaths reported for a calendar year per 1 000 persons present in the same geographic area at the midpoint of the year or, in a few cases, at the census date or at some other point within the year. The rates for 1920-24, 1925-29, and 1930-34 are five-year weighted averages.

In general, the population totals on which rates are computed are those presented in Table 3. Therefore, in the absence of an official population in Table 3, rates will not appear in this table despite the fact that frequencies for the year in question may be shown. Some exceptions occur when the rates refer to only a part of the population for which an estimate is published in Table 3. But, in general, reference may be made to Table 3 for information on the type of population which constitutes the denominator of the rates shown in Table 25.

Wherever possible, rates which do not represent complete geographic or ethnic coverage are footnoted, as are those in which there is some minor lack of correspondence between the numerator and the denominator. Rates are not shown where the coverage of the death statistics differs importantly from that of the available population base.

Limitations: The quality-of-data code described on page 28 will be found in this table, although it is equally applicable to Tables 26-29. The code should always be taken into consideration when data from this table are used for any purpose.

Likewise, although the factor is of greatest importance in connexion with live births, attention is directed to the variation among countries in the basis of tabulation, i.e., by date of occurrence or date of registration, which is designated in this table by a symbol (†).

Crude death rates measure the total decrease in the population of an area due to death. Because they take no cognizance of differences in the age-sex composition of populations and since mortality is highest at the older and younger ages, crude rates are not strictly comparable from area to area. Nevertheless, crude death rates are useful in measuring gross differences in the levels of mortality and as a guide to areas where factors favouring excessive mortality are operating.

Table 26

The latest available distributions of deaths by age and sex are set forth in Table 26. "Age" in this and other tables showing this characteristic is assumed to be expressed in completed units of time, e.g., completed years of life. The age classification used is "under 1 year", 1-4 years, 5-year categories ending with 80-84, a residual group of 85 and over, and one for "unknown". For statistics which do not conform to these column headings, supplementary box-heads are run in, and/or the scope of the revised age group indicated by horizontal bars through the columns.

Coverage: Data are shown for 135 areas, or all which reported, unless they were considered completely unreliable or totalled less than 50 deaths at all ages. Thus, the table may serve to indicate the countries which tabulate deaths by age and sex and whether the classification is the recommended one.

Limitations: Because these data are classified according to age, they are subject to the inaccuracies of age reporting described in connexion with population (see p. 18). The absence of frequencies in the unknown age group does not necessarily indicate complete age reporting; it may also be an indication that the "unknowns" have been eliminated either by assigning an age before tabulation or by proportionate distribution after tabulation.

The "completeness" of these statistics may be determined from the code "C" or "U" which was described in connexion with vital statistics in general (p. 28) and which appears on Table 25.

Comparability may also be affected to some degree by differences in the basis of tabulation, i.e., by date of occurrence or by date of registration. The symbol of a dagger (†) is used to indicate which countries tabulate by date of registration.

The exclusion from some series of deaths of infants who die before their births are registered and who are thereby registered only as stillbirths or as "presented without life", may contribute to the lack of comparability, but the effect is usually negligible.

Table 27

The latest available death rates specific for age and sex are presented in Table 27. An initial age class of "under 1 year" is followed by "1-4" and 5-year age groups to 80-84. A residual terminal group of "85 years and over" completes the classification. Deviations from these categories are shown in the table by consolidation bars.

Coverage: A total of 85 geographic units are able to be included in this table despite the fact that availability of an acceptable population base corresponding to the age and sex classification of the deaths was required. "Acceptability" in this case implies corresponding geographic coverage together with the same age classification. Further, the age classification must be the result of an enumeration, or be based on an enumeration adjusted in time by the use of vital and migration statistics. Estimated distributions which are prepared by applying to the total the percentages of population in each age group at the time of the census are not used.

Rate computation: In computing these age-specific rates, deaths at unknown ages and the population of unknown age were disregarded except as they formed part of the death rate for all ages combined. Each rate is, therefore, the number of deaths that occurred within a given age group during the course of a year, per 1 000 persons falling

within that age group at the middle of the year or at some other date within the year. The populations used are those which appear in Table 10.

It should be noted that the rates for infants under 1 year of age in this table differ from the infant mortality rates shown in Table 28, the latter being computed on the number of live births reported for the year rather than on the population under 1 year of age at the middle of the year.

Also, the rates shown here for all ages combined differ in a number of cases from those shown in Tables 25 and 29, the reason being that these are based on the population for which an appropriate age distribution was available, while the rates in Tables 25 and 29 may utilize a different total figure. The population by age and sex might refer to a census date within the year rather than to the midpoint, or it might be more or less inclusive as regards ethnic groups, armed forces, and so forth. In a few instances, the difference is attributable to the fact that the rates in this table were computed on the mean population (obtained by averaging age data for two successive Decembers), whereas the corresponding rates in Table 25 were computed on an estimate for 1 July. Differences of these types are very small and are not noted in the table.

Limitations: This rate table is based on Table 26, in which the absolute frequencies appear, and is therefore subject to all the limitations mentioned in connexion with that table.

The problem of obtaining precise correspondence between deaths and population, as regards the inclusion or exclusion of armed forces, refugees, displaced persons, and other special groups, is particularly difficult where age-specific death rates are concerned. In cases where it was not possible to achieve strict correspondence, the differences in coverage are noted. Male rates in the age range 20 to 40 years are sometimes affected by this non-correspondence and care should be exercised in using these rates for comparative purposes.

It should be added that even when deaths and population do "correspond", the comparability of the rates may be affected by abnormal conditions such as absence from the area of large numbers of young men in the military forces. The result is that death rates appear high in these ages, simply because a large section of the able-bodied members of the age-group, whose death rates under normal conditions might be less than the average for persons of their age, has been removed from the computations.

Table 28

Statistics of infant mortality (mortality under 1 year of age) are given in Table 28 for the period 1920 to 1954. Like Table 25, this table presents 5-year weighted average rates for 1920-1934, annual infant mortality rates for 1946-1954, and the number of deaths under 1 year for 1946-1954.

Coverage: These data relate to the present-in-area population of the 155 major geographic units for which recent statistics on infant deaths were reported. Since infant mortality rates are computed on the number of live births, the availability of population bases is not a limiting factor in the coverage of this table.

Rate computation: Computed in accordance with the conventional method, infant mortality rates shown in this table are the number of deaths under 1 year of age per 1 000 live births which occurred during the same time period. This means that no adjustment was made to take account of the fact that some of the infant deaths which occur during a given year are deaths of infants who were born during the preceding year. However, unless the numbers of live births or infant deaths are changing rapidly, the error involved is not important.[15]

Limitations: Perhaps the most important and widespread limitation on the comparability of infant mortality rates is that resulting from compiling statistics of infant deaths and live births by date of registration, irrespective of the date of occurrence of the events. Where these procedures obtain, a large increase, for whatever reason, in the number of live births registered in any one year may introduce sizable errors into the infant mortality rates, especially since deaths tend to be more promptly reported than births. If the delay in registration remains nearly constant and is approximately the same for births and deaths, the rates are not affected to any appreciable degree by this factor. But if—as is the case in many countries—a large proportion of the births for one reason or another are not registered until many years after occurrence, then infant mortality rates obtained by relating infant deaths for any one year to births which occurred over a period of years, have little validity. Because of the importance of this factor, especially as it relates to the live births which constitute the denominator of the infant mortality rates, the statistics known to be by year of registration are identified with a dagger (†).

Even on a "date-of-occurrence" basis, under-registration of births and infant deaths also affects the infant mortality rates unless the proportion registered is the same for both components. In order that information on the completeness of the data may be available, the code "C" or "U", discussed in detail on p. 28 has been incorporated into this table as a guide.

This code, which is essentially that shown in connexion with deaths at all ages in Table 25, refers primarily to the completeness with which deaths under one year are registered and reported. As noted above, differences in levels of completeness between the two components of the infant mortality rate, i.e., the infant deaths and the live births, will bias the rates upward or downward, the direction of bias depending on which component is more fully registered.

Another factor which has a bearing on the completeness of live-birth and infant-death registration is that concerned with the statistical definitions of the events to be reported. As indicated in the discussion on p. 31, the exclusion from both the live-birth and the death register of live-born infants who die before 24 hours of age or before registration of birth, may distort the statistics to some extent, tending to give the rates a downward bias. Failure to register as a live birth each infant death which occurs during the first few weeks of life may also be a factor

[15] For a more detailed discussion of this problem, see *Foetal, Infant and Early Childhood Mortality*, United Nations. Department of Social Affairs. Population Division, document ST/SOA/Series A, Population Studies No. 13, New York, Vol. I, Chapter II.

in the lack of comparability among infant mortality rates, but the effect, if any, would be toward an upward bias.

Table 29

Cause-of-death statistics, both numbers and rates, are set forth in Table 29. This table shows data for one year (the latest) for as many geographic units as possible.

Table 29 is divided into Part A and Part B. Part A shows deaths and death rates tabulated according to the 44 cause groups comprising the "Abridged International List of Causes of Death" of the 1938 (fifth decennial) Revision of the "International List of Causes of Death",[16] while Part B includes data tabulated according to the 50 cause groups in the "Abbreviated List of 50 Causes for Tabulation of Mortality" of the 1948 (sixth) Revision, which is known as the "International Statistical Classification of Diseases, Injuries, and Causes of Death".[17]

This two-part presentation is required because the 1948 Revision, unlike its predecessors, does not provide a classification scheme which conforms directly to the one immediately preceding it, namely to the 1938 Revision. It is not possible, therefore, to allocate data tabulated according to the 1938 Abridged List to the cause groups of the 1948 Abbreviated Classification and, since several countries still report data in the former groups, both classifications are necessary in the table to ensure fullest geographic coverage. It will be noted, however, that only 8 countries still remain in Part A. It may be anticipated that these 8 will also begin to tabulate by the newer Revision in the future.

Coverage: A total of 71 geographic areas appear in this table, 8 showing data according to the 1938 List and 63 according to the 1948 Revision.

The criteria used to determine whether or not data for an area should be included were first, availability of data classified according to either of the two "Lists" mentioned above, and second, that the total number of deaths classified as "due to senility" and "ill-defined or unknown cause" did not exceed twenty-five per cent of the total deaths from all causes. Even though the data by cause are known to be defective because of lack of medical certification, the areas were retained in the table unless they were eliminated on the basis of the above criteria.

Rate computation: Rates by cause are the number of deaths in each cause group per 100 000 persons in the midyear or other annual estimate of population. The rate for all causes combined is, therefore, the sum of the cause group rates, and has a magnitude 100 times that of the crude death rate shown in Table 25 or the death rate at all ages shown in Table 27.

In one or two instances it may be noted that the rate for all causes does not agree exactly with the corresponding total death rate shown in Tables 25 or 27. This lack of agreement is due primarily to differences in the total of deaths tabulated by cause. Such differences might be the result of the omission from the tabulation of reports, the receipt of which was delayed unduly, or the exclusion from the cause distribution of those infants born alive who died within 24 hours of birth or before registration, and who, therefore, were registered as "stillbirths" or as "*présentés sans vie*". In several countries, tabulation procedures have been provided to separate these pseudo-stillbirths from true stillbirths and to incorporate them into the total deaths, but even in these cases there is no way of knowing the cause of the death, since it is not registered.

Limitations: Cause-of-death statistics, which are of the greatest importance from both the public health and demographic point of view, are unfortunately subject to many defects in addition to those already described as limiting the international comparability of death statistics in general. These additional limitations arise mainly from differences among countries in the quality, availability, and efficiency of medical services and certification procedures.

Particular care must be taken with respect to distributions with relatively large numbers of deaths attributed to "unknown", "ill-defined" or "unspecified causes", and to "senility". In such cases, causes of death among whole segments of the population may have been undiagnosed, and the distribution of known causes is likely to be quite unrepresentative of the situation as a whole. None of these unreliable distributions is specifically footnoted in the tables, but attention is called to the fact so that caution may be used in interpreting cause-of-death rates for areas in which a large proportion of the deaths are classified as due to "senility" or "unknown cause". An examination of the distributions from this point of view, together with the general quality code found in Table 25, should provide a basis for a rough evaluation of cause-of-death statistics. For a more detailed discussion of the problems involved in the interpretation of cause-of-death statistics, see Chapter II of the *Demographic Yearbook 1951.*

4. Marriage statistics

Statistics of marriages are given in Table 30 only. In accordance with the recommendation made in the *Principles for a Vital Statistics System,*[18] the statistics refer, unless otherwise noted, to formal marriages, that is, to the legal union of persons of opposite sex, the legality of which may be established by civil, religious, or other means recognized by the laws of each country. Wherever possible, the data presented in the table relate to both civil and religious marriages (if both types of marriage are recognized) and are the number of marriages performed during the specified year, rather than the number registered.

Data presented in this table relate to marriages performed within the present boundaries of the geographic areas indicated and, unless otherwise noted, within the present-in area population of those areas. However, by virtue of the legal concept to which the data are bound, marriages among tribal or indigenous groups isolated from the dominant culture are almost invariably excluded from the statistics. These cases are generally footnoted, nevertheless, as well as all other deviations from the *de facto* concept.

[16] *Nomenclatures Internationales des Causes de Décès 1938 (Classification Bertillon),* published in co-operation with the Ministère des Affaires Etrangères de la République Française by the Institut International de Statistique, La Haye, 1940.

[17] *Manual of the International Statistical Classification of Diseases, Injuries, and Causes of Death,* Sixth Revision of the International Lists of Diseases and Causes of Death, Adopted 1948, Volume I. (Bulletin of the World Health Organization, Supplement 1, Geneva, Switzerland, 1948).

[18] *Op. cit.* Principle 202.

Definitions: Because marriage, unlike birth or death, is a legal act rather than a biological fact, the problem of comparability takes on a somewhat different aspect in relation to these data. With respect to the effect of variation in the statistical definition of marriage, for example, it should be noted that by their nature, consensual unions are excluded from the usual definition and thus, from statistics of marriages, except as special measures for legalizing them may bring them into the category of legal marriages. In some countries, such unions are as frequent as formal marriages and are accepted as marriages in the local *mores*. For these countries marriage statistics based on registered ceremonies are misleading as indicators of the actual rate of family formation.

The need for obtaining statistics on consensual unions was recognized by the Statistical Commission in the *Principles for a Vital Statistics System*[19] where it said, in reference to the Definition of a Vital Statistics System[19] (Principle 101), ". . . Particular attention is drawn to the desirability of exploring methods for obtaining data on non-registered marital unions (variously known as 'common-law', 'customary' or 'consensual') with recognition of the fact that, by their very characteristics, they are not obtained by the registration method as defined in Principle 102."

Until such times as a means of recording these "non-registered marital unions" is developed, statistics of marriages will refer to formal or legal unions only and, as such, will be misleading as indices of biological unions, a knowledge of which is important both from a demographic and a public-health point of view.

The composition of the statistics within the framework of each country's legal definition of marriage varies considerably, depending on laws and practices with respect to the registration of marriages and the compilation of statistics. Thus, some countries compile statistics only for civil marriages, although religious marriages may also be legally recognized; in other countries, the only records available are church registers and the statistics, therefore, relate to religious marriages only. In one or two countries, statistics relate to the marriage licenses issued, that is, to the documents granted by the State, certifying to the fact that the requirements for legal marriage, i.e., requirements of age, consent, health, and so forth have been met. The number of marriage licenses issued necessarily overstates the number of marriages performed, since such licenses are declarations of intent not followed in all cases by a marriage ceremony. In the absence of statistics of marriages performed, however, they do give a fair approximation to the actual number of marriages which occurred.

Completeness of data: Because of the variation in the content of marriage statistics in each country (i.e., civil and/or religious), it is rather difficult to evaluate "completeness" in a relative sense and in terms of including every event which occurred. Moreover, the concept of "completeness" is actually difficult to define in the case of marriages because, in most countries of the world, the act of legalizing the union is at the same time the legal "registration" of the union.

[19] *Op. cit.*

However, in countries such as the United States and in those where only religious marriages are legal, the act of registering the marriage in the civil register is a separate and distinct function from the performance of the marriage ceremony and, in such cases, there may be a discrepancy between the number of legal marriages actually performed and the number which are registered. In view of these considerations, the measures of "completeness", provided by the countries, have been shown in Table 30 in the form of the code "C" or "U" to denote "complete" or "incomplete" statistics of marriages, however defined.

The existence or non-existence of a time interval between the performance of a marriage and its registration is pertinent also to the understanding of the implications of the symbol (†) used in Table 30 as it is in other tables to indicate that statistics were tabulated on a date-of-registration basis rather than by date of occurrence. As was pointed out previously, the qualification is most meaningful in relation to live births; nonetheless, this factor, together with information on the type of data included, should be kept in mind in using marriage statistics from Table 30.

Table 30

This table, corresponding in format to the other trend tables, presents the number of marriages performed in 1946-1954, together with the crude marriage rates for the same period and for 1920 to 1934. Rates for 1920 to 1934 are five-year weighted averages, while those for 1946-1954 are based on annual data.

Coverage: Statistics are presented for 147 individual geographic areas which, because of the lack of a corresponding population base, may be somewhat less than the coverage of a table devoted solely to the "number of marriages." As in similar tables on live births and deaths, some geographic areas are omitted in the absence of recent data. It should also be noted that the geographic coverage, extensive as it appears, is still deficient for much of Africa where data relate to small segments of the total population only.

Rate computation: The rates in Table 30, like corresponding crude rates in other tables, are the number of marriages reported as having occurred within the boundaries of the geographic area per 1 000 total persons present in the same area at the midpoint of the year in question. In only a few cases is a census figure or an estimate for some other date within the year used in place of the midyear population.

The populations, midyear or other, used in the computation of the rates are, in general, the official figures presented in Table 3. Therefore, in the absence of an official population for any year, a rate will not be computed, despite the fact that the frequencies are available. In general, reference should be made to Table 3 for the type and coverage of the populations used in computing the rates.

Limitations: As explained above, this table, like all corresponding trend tables, includes a quality-of-data code which appears as "C" or "U" in the first column of the table. The elements of the code and its implications have been described on p. 28 and above.

The lack of comparability resulting from varying concepts of what constitutes a "marriage" and the differences among countries in the proportion of total unions which are "consensual", i.e., non-registered unions, will be evident from an examination of the crude rates shown in Table 30. The very low rates shown for some countries, particularly in Latin America, are largely attributable to the prevalence of consensual marriage, though under-registration of legal marriages is in some cases a contributing factor.

Crude marriage rates, like crude birth and death rates, are of only limited value for analytical purposes. Marriages are more appropriately related to the "marriageable" population, i.e., widowed and divorced persons and single persons who have reached the age of consent. However, crude rates do measure changes and differences in the frequency of marriage in a total population, and fluctuations in the rate are often found to reflect changes in economic and social conditions.

5. Divorce statistics

Table 31 alone presents statistics of divorce. The data which appear in this table refer, unless otherwise noted, to final divorce decrees reported by each country. These final decrees may be granted by religious or civil courts according to the law in each country; they may be registered either by the courts alone or by the courts and the civil registrar; and statistics may be based on court records or on statistical reports of divorce. These factors have no real bearing on the nature of the data, although the type and character of the statistics are noted in the tables when specified in the source.

In so far as possible, divorce statistics refer to final divorce decrees registered in the present-in-area population of the geographic unit specified. Divorces among tribal or indigenous groups isolated from the dominant culture are invariably excluded from the data, because they are not granted by the usual court procedures nor do they come within the jurisdiction of the registration system.

Divorce data are affected by the same kinds of legalistic considerations as those described above in relation to the marriage data. They are perhaps affected by even wider variations among countries in the laws and regulations relating to the dissolution of marriage. These laws range from total prohibition in Brazil, Chile, Colombia, Ireland, Italy, and Spain, among others, through the wide range of grounds upon which divorces may be granted, to the ready granting of divorce in response to a simple statement of desire or intention. Naturally, the incidence of divorce is relatively lower in areas where they are difficult to obtain, though variations in social *mores* are also a contributing factor to variations in the frequency of divorce. These two factors are not unrelated.

For countries where polygamic marriage is an accepted institution, divorce statistics have a somewhat different meaning. In these areas, the factor of freedom to marry a different spouse is relatively unimportant, at least for males, and divorce is more frequent than in other areas. Egypt, for example, recognizes three types of divorce (revocable divorces, suspended marriages, and final divorces), all of which are concerned with the conditions under which the marriage in question may be resumed rather than whether other marriages may be contracted. They are also concerned with economic and financial obligations, but this is an element of divorce regulations in other countries as well.

Because of the differences cited above, divorce rates cannot be taken as indicative of the actual rate of marital dissolution from the social and demographic point of view. Many marriages are broken in ways other than through divorce (as through death, desertion, etc.). Divorce rates, therefore, are likely to measure to what extent the population can afford divorce or the stringency of divorce laws, rather than how often family or marital dissolution actually occurs.

Definitions: The definition of a divorce used in this table is that recommended by the United Nations in *Principles for a Vital Statistics System*[20] and reads as follows:

> *Divorce is a final legal dissolution of a marriage, that is, the separation of husband and wife by a judicial decree which confers on the parties the right to civil and/or religious remarriage, according to the laws of each country.*

This definition automatically excludes "legal separations" and "annulments."

It will be noted, however, that a number of countries include "annulments" with statistics of divorce. An annulment according to the vital statistics Principles[21] is the *invalidation or voiding of a marriage by a competent authority, according to the laws of each country, which confers on the parties the status of never having been married to each other.* Thus, an annulment differs from a divorce in that the preceding marriage is cancelled rather than set aside or dissolved, although it is similar in that it confers on the parties the right to remarry. In countries where divorce proper is recognized, the number of annulments is usually quite small. It should be noted, however, that in countries where divorce is prohibited, the act of marriage annulment may tend to take the place of the legal divorce decree as a means of accomplishing dissolution of marriage.

Another factor which may influence comparability between series of divorce data is the inclusion, in a few cases, of legal separations. Normally, a *legal separation is the disunion of married persons, according to the laws of each country, which does not confer on the parties the right to remarry.*[21] In some areas, Sweden for example, legal separation is typically a preparatory phase to divorce, divorce being granted automatically after a stated period of legal separation.

Finally, in respect of definition of data included, it may be noted that some countries report "petitions" rather than final decrees. These two terms have for each other somewhat the same relationship as the concept of licenses has to marriages, but in the case of divorce, it may perhaps be said that the number of petitions entered in the courts constitutes an adequate approximation to the number of divorces granted, although every petition does not result in a final decree. The important limitation in using statistics of petitions rather than of di-

[20] *Op. cit.* Principle 202.
[21] *Principles for a Vital Statistics System, op. cit.* Principle 202.

vorces granted lies in the time reference of the data. In such cases, data such as age of divorcees, age of dependent children, and so forth, refer to the time of the petition rather than to the date of the decree, and this may involve an error of several years.

The evaluation of "completeness" is even more difficult in respect of divorces than it is for marriages. This is so because the granting of divorce as defined here is a legal act which by its nature is registered, and it is somewhat difficult to conceive of how any could escape registration.

However, statistics of divorce are based on registered events reported by the religious or judicial courts directly, or by the registrar to statistical authorities. In either case, it is perhaps understandable that some registered divorces may fail to be reported statistically, especially those originating in religious courts; it is in this context that the codes of completeness must be viewed. The elements of the code have been set forth on p. 28 above and will not be repeated here.

As in the case of marriage statistics, tabulation by date of registration rather than by date of occurrence does not impose any sizable limitation on the comparability of the data. There may be a slight time lag between the granting of the decree and the registration of that decree in the civil register, but the delay in any case probably should not exceed a reporting period, normally a month or a quarter. Because of the lack of homogeneity in the data, and the assumption of negligible effect, the symbol distinguishing the basis of tabulation has been omitted from the divorce table.

Table 31

Table 31 presents the number of final divorce decrees together with the crude annual divorce rates for each year 1946-1954.

Coverage: Unless otherwise noted, statistics in this table relate to the present-in-area population of 103 geographic areas. This coverage, while relatively extensive for divorce statistics, is still somewhat below the potential coverage due to several factors. As in similar time-trend tables presented in this *Yearbook*, coverage was limited by the availability of corresponding population estimates on which to compute rates for 1946-1954, and also by the fact that for some areas, the incidence of divorce was too small to provide an adequate base for a rate. In this table, as in similar tables of live births, deaths, and marriages, the coverage for Africa is extremely limited, principally because of the nature of the data.

Rate computation: Crude divorce rates are the number of final divorce decrees reported in the time period per 1 000 persons in the midyear or other annual estimate of population. In general, the populations on which the crude rates are computed are those official estimates or censuses presented in Table 3. Reference to this table will provide information on the character of the denominator of the rates in respect of its type and coverage and also as to its revised or unrevised nature. It will be seen from the footnotes to the table that strict correspondence between the numerator and the denominator was not always possible. For example, in Spanish Morocco and Zanzibar, divorces refer to events among selected communities, but lacking a strictly corresponding base, rates have been computed on total population. The effect of this lack of comparability is to decrease the rates, but it is probably negligible for the countries where it exists.

Limitations: In the first column of Table 31 will be found the quality-of-data code described on p. 28. Even though evaluation of "completeness" tends to be difficult, the code which designates the statistics as "complete" (C) or "incomplete" (U) will perhaps give some guidance.

The total number of divorces and the crude divorce rates are subject to all the limitations mentioned in connexion with divorce statistics in general. These include differences in the regulations governing the divorce procedure and variations in the type of data to which statistics of divorce relate.

In addition to these specific sources of variation, crude divorce rates computed in relation to all persons in the total population are subject to the limitations of crude rates in general. Crude divorce rates are a measure of the frequency of marriage dissolution by divorce, or conversely of the gross additions to the marriageable population. But because of basic differences in the marital status and age composition of populations, they do not measure the risk of divorce among married persons or couples. They give only a general idea of the trends over time and the gross differences between countries in levels of divorce in the total population. They are limited always by the international variations in the meaning of the term "divorce".

LIFE TABLES

Life tables are based on observed mortality conditions for a selected period, but permit a more detailed analysis of the implications and prospects inherent in those conditions than do conventional central death rates.

Three principal functions are usually given in the *Demographic Yearbook*: the probability of dying within one year or within a specified age interval for persons of exact ages specified (q_x); the survivors at the beginning of each age interval out of a generation of 100 000 (l_x); and the mean after-life time or the mean expectation of life for persons at exact ages specified ($\mathring{e}_x$). But because this issue of the *Yearbook* is devoted primarily to statistics of population from censuses, it includes only one compilation of life-table functions, namely the expectation of life, or mean after-life time ($\mathring{e}_x$) at various ages.

Details of procedure in life table construction vary somewhat, depending in large measure upon the availability and form of basic data. The values of the life-table mortality rate (q_x), which is the basic function of the life table, are generally so derived as to correspond to the death rates of persons of that age in a particular period of time. The basic data ordinarily consist of (*a*) deaths in a given period classified by age and sex and (*b*) the mean population of each age and sex during that period. The most usual procedure is to utilize statistics of deaths in a three-year or five-year period centred at the census date so that the census figures can be taken as the mean population. Sometimes the period covered is that between two censuses, and the population figures utilized are averages of the results of the two censuses. A correction for the effect of migration is occasionally made. In a few rare cases (for example, in India), approximate life tables have

been computed without the use of data on deaths by deriving q_x values from the comparison of the population in each age group as enumerated at one census with the survivors at the next census. It is common to make adjustments in order to correct for misstatements of age in the census and death-registration data and in order to obtain successive values of q_x which vary smoothly from one age to the next.

Special problems arise in deriving q_x values for the very young ages and for the end of life. For the young ages, q_x values are frequently obtained by using the statistics of births occurring in the last few years and estimating from them the number of persons at risk of dying in the period to which the life table relates. At the older ages, data are frequently so scanty or unreliable that they have to be subjected to considerable manipulation if a reasonable series of q_x values is to be derived from them. In many cases, the life-table q_x values at the high ages do not depend in any way on the registered deaths at those ages, but have been estimated on the basis of q_x figures for younger ages.

Though first developed for actuarial purposes, the life table has many applications in the demographic field. Among these are: (1) the preparation of population projections by age and sex; (2) analysis of effects of mortality on the age and sex composition of a population; (3) comparisons of summarizing measures of mortality, as the life table death rate (the reciprocal of the expectation of life at birth), expectation of life at various ages, etc.; (4) computation of net reproduction rates; and (5) the appraisal of the accuracy of census enumerations and vital registration data. In addition, life-table techniques have been applied to the analysis of other types of demographic data, for example, in the computation of probabilities of marriage, specific for age and sex, on the basis of census data classified by marital status.

The accuracy of life tables depends mainly upon the accuracy and completeness of the registration of deaths and of the enumeration of the population at the census. Deficiencies in death registration are likely to be greater than corresponding defects in census enumeration. Where this happens, death rates are understated and the l_x (survivors) and $\mathring{e}_x$ values are exaggerated. The mortality rates computed from population and death statistics at the very young ages are particularly likely to be understated, and such an error affects the l_x values throughout the table. As indicated earlier, infant mortality rates obtained by relating the number of infant deaths to the number of births in countries where registration is deficient may be either too low or too high, and the error in either direction may have an important effect on the l_x values for every age. The expectation of life at birth ($\mathring{e}_o$) will also be too high or too low.

The accuracy and the international comparability of life-table values are particularly suspect at the highest ages. Those values depend, as has been said, on imperfect data and frequently on somewhat arbitrary procedures. Certain remarkable features—for example, the fact that the expectation of life at ages over sixty is often distinctly higher in countries where mortality in general is heavy than in countries with low death rates—may, thus, merely reflect imperfections of the tables.

Differences in the methods used for constructing life tables (adjustment of data, graduation, etc.) may affect the reliability of the results and impair their international comparability. The effect of such differences is, however, probably much smaller than that of deficiencies in censuses and in death registration.

Table 32

Table 32 gives the "expectation of life" ($\mathring{e}_x$) or the average number of years of life remaining for persons reaching the ages specified. These data are based on the mortality rates of the life table (q_x). The life tables from which data are taken are the latest available for each country. The values for male and female separately, each year from birth through five, are given, together with the expectation at every fifth year thereafter through 85. The only area for which data do not conform to this classification is Hawaii and, for this, extra headings have been run in on the table.

Coverage: Values are shown in Table 32 for 62 geographic areas. Lack of reliable base data restricts the number of areas for which life tables are available but even so, the coverage has increased notably in the last few years.

Limitations: Expectation-of-life values are subject to all the limitations set forth above in the discussion of the accuracy of the life table. The values in Table 32 are to be interpreted strictly in terms of the underlying assumption that surviving cohorts are subjected to the age-specific mortality rates of the period to which the life table refers. Thus, in interpreting $\mathring{e}_{50}$ in the 1945-1950 life table for Norway, it may be said that, if males reaching age 50 were to experience for the rest of their lives the same age-specific mortality rates that obtained during the period 1945-1950, they would, on the average, live 26.4 years past the age of 50.

CHAPITRE I. *LES RECENSEMENTS DE POPULATION DE 1950*

HISTORIQUE ET IMPORTANCE DES RECENSEMENTS DE POPULATION

Les recensements de population ont une longue tradition remontant à l'antiquité. Quoique ces opérations n'aient pas toujours été connues sous le nom de recensements, leur but essentiel a toujours été de fournir un état numérique de la population. Cet objectif s'est modifié avec le temps pour répondre à l'évolution des besoins de la société. C'est ainsi que les recensements modernes n'ont pas les mêmes fins administratives que ceux effectués par les Romains il y a 2 000 ans.

Quel que soit leur passé dans ce domaine, les pays reconnaissent de plus en plus la valeur purement statistique des recensements de population. Des dispositions rendant confidentiels les renseignements personnels fournis à l'occasion des recensements de population se trouvent à présent dans la législation de presque tous les pays. Dans certains d'entre eux ces informations ne peuvent même pas être communiquées à d'autres administrations de peur qu'elles ne soient utilisées à des fins fiscales, de conscription, policières ou autres.

Dans son sens actuel, un recensement de population peut être défini comme l'ensemble des opérations qui consistent à recueillir, à grouper et à publier, à un moment déterminé, des données démographiques sur tous les habitants d'un territoire indiqué. Les caractéristiques fondamentales d'un recensement sont:

(1) *Universalité* — le dénombrement doit porter sur tous les membres de la communauté et ne doit pas comprendre d'omissions ni de doubles comptes.

(2) *Simultanéité* — tous les résultats du recensement doivent se rapporter à une période bien déterminée.

(3) *L'individu, unité de recensement* — un recensement suppose que des données distinctes seront recueillies pour chaque personne (le procédé d'après lequel des données "globales" ou sommaires sont réunies pour des groupes d'individus n'est pas un recensement).

(4) *Territoire déterminé* — Les opérations de recensement doivent porter sur un territoire parfaitement déterminé.

(5) *Groupement* — Le groupement et la publication des données par régions géographiques et suivant certaines caractéristiques démographiques fondamentales font partie intégrale d'un recensement.

La périodicité est également sous-entendue dans la définition d'un recensement moderne. De fait, les données fournies par les recensements sont bien plus significatives si les dénombrements sont effectués à intervalles réguliers, c'est-à-dire, au moins tous les dix ans.

Il convient de noter cependant que de nombreux dénombrements qui se placent à des époques différentes de l'histoire des recensements, qu'ils aient été appelés recensements ou autrement, ne correspondent pas toujours entièrement à la définition, donnée ci-dessus, d'un recensement moderne.

UTILISATIONS DES DONNEES FOURNIES PAR LES RECENSEMENTS

Les utilisations des données fournies par les recensements sont trop nombreuses et variées pour être toutes énumérées ici. Toutefois, on peut en mentionner quelques exemples. Le "découpage" de la population à des fins électorales ne peut être effectué sans connaissance préalable de la répartition de la population. On ne peut étudier les problèmes présentés par le chômage, les mouvements migratoires, la construction des logements, les transports et les communications, l'administration de la justice, etc., sans données à l'appui. En l'absence d'un recensement, il est impossible d'établir les estimations budgétaires relatives au nombre d'établissements scolaires qui seront nécessaires pour la nouvelle génération ou pour le paiement de la retraite des vieux. De même les programmes du régime des assurances sociales reposent également sur les statistiques de recensement qui entrent en majeure partie dans les calculs actuariels.

Des données sur le sexe et l'âge, l'état matrimonial, les caractéristiques relatives à l'instruction, le lieu de naissance, la nationalité légale, la langue, l'activité économique présentent un grand intérêt dans les domaines les plus divers ce qui explique qu'elles sont rassemblées dans presque tous les recensements modernes. On ne pourrait calculer de taux de natalité, de mortinatalité, de mortalité, de nuptialité et de divorce ni construire de tables de mortalité sans les statistiques fournies par les recensements. L'utilité de posséder des renseignements démographiques pour l'industrie, le commerce et la recherche dans le domaine économique et social n'est plus à démontrer. Bien que les données fournies par les recensements ne permettent pas de résoudre directement les problèmes qui se posent aux gouvernements, il est certain que sans elles il serait difficile, sinon impossible, d'en étudier tous les aspects.

DEVELOPPEMENT DES RECENSEMENTS DANS LES DIVERS PAYS

Le développement des recensements au cours du siècle dernier est illustré par le fait qu'aux environs de 1860 et 1870 les dénombrements effectués tous les dix ans ne portaient que sur 200 millions de personnes. Durant la décade commencée en 1880, ce total a atteint 500 millions pour passer à 800 millions vers 1900. Ces progrès s'accentuèrent

et le nombre de personnes recensées dans la décade de 1930 s'élevait à environ 1 200 millions, à 1 300 millions aux alentours de 1940 et à 1 900 millions dans les années voisines de 1950.

Ces chiffres relatifs au nombre total de personnes dénombrées varient énormément suivant la proportion des pays à forte population ayant effectué des recensements durant ces diverses périodes. Le tableau ci-dessous qui indique le nombre de pays indépendants de chaque continent ayant effectué un recensement de population pendant chacune des décades de 1855 à 1954 permet de se faire une idée encore plus nette du chemin parcouru dans ce domaine.

Nombre de pays indépendants ayant effectué un recensement de population durant chacune des décades de 1855 à 1954

Décade	*Total*	*Afrique*	*Amérique du Nord*	*Amérique du Sud*	*Asie et Océanie*	*Europe*
1955-64	24	0	4	2	1	17
1865-74	29	0	2	5	3	19
1875-84	37	1	5	4	6	21
1885-94	35	0	6	3	6	20
1895-1904	44	2	7	5	7	23
1905-14	42	2	7	4	6	23
1915-24	48	2	9	4	11	22
1925-34	49	2	8	2	10	27
1935-44	44	3	9	6	9	17
1945-54	65	2	12	8	15	28

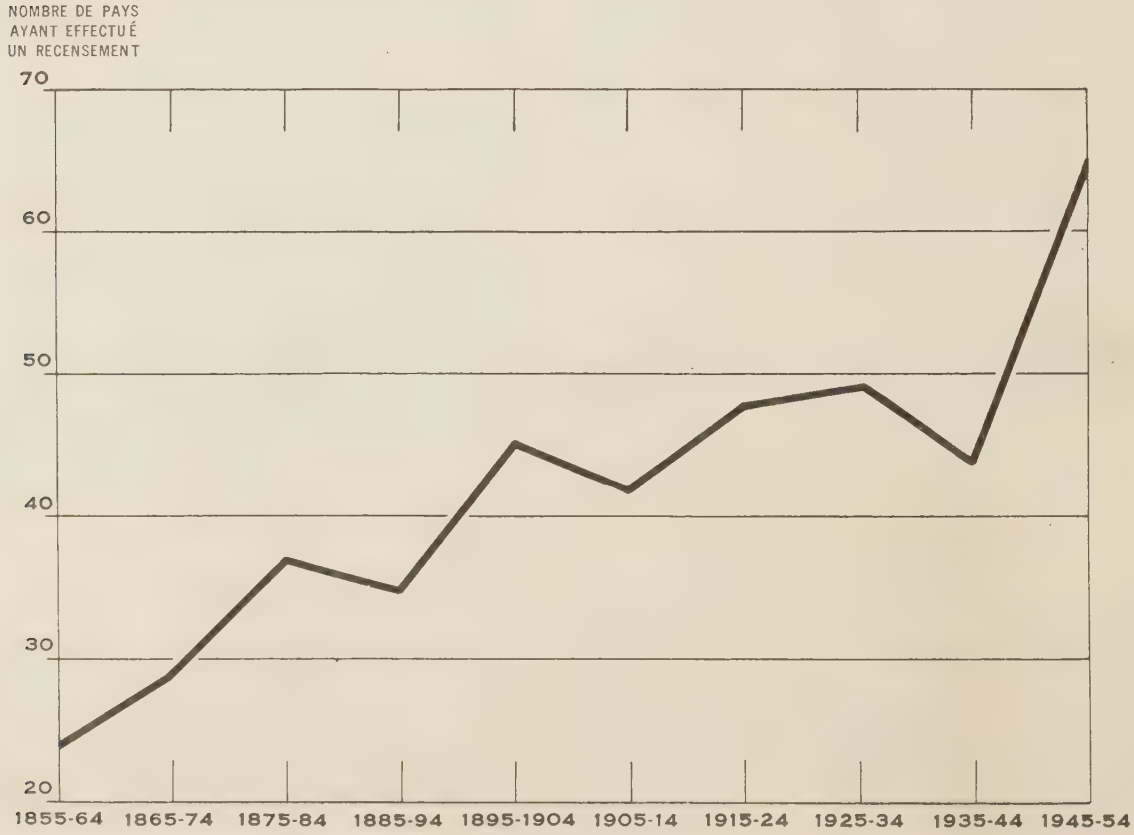
Le nombre de ces recensements a augmenté à peu près régulièrement, passant de 24 pour la période de 1855 à 1864, à 65 durant celle de 1945 à 1954, ce dernier chiffre étant supérieur de plus d'un tiers au chiffre immédiatement le plus élevé pour l'ensemble de la période (1855-1954). Cette évolution est retracée ci-dessous sous une forme graphique.

On remarquera que d'après le graphique, le nombre de recensements effectués durant la période se situant autour de 1940, est anormalement faible. Il est certain que ce nombre et la proportion de la population du monde dénombrée durant cette période auraient été beaucoup plus élevés sans l'avènement de la Seconde Guerre mondiale qui obligea à reporter l'exécution de certains recensements prévus pour 1940 et 1941 en Europe et dans d'autres parties du monde.

Outre la diminution du nombre de recensements en 1940 et 1941, la guerre eut pour autre conséquence de réduire la concentration des recensements qui aurait dû se produire autour des années 1950 et 1951 qui, normalement, auraient dû être des "années de recensement." En effet, après la guerre, de nombreux pays éprouvèrent le besoin de disposer de renseignements récents sur la répartition et les caractéristiques de leur population; ces pays effectuèrent un recensement en 1946 et 1947 plutôt que d'attendre jusqu'en 1950. On peut citer, entre autres dans ce groupe, la Bulgarie (1946), la France (1946), l'Argentine (1947), l'Australie (1947), la Belgique (1947), l'Egypte (1947), les Pays-Bas (1947) et la Thaïlande (1947).

Comme la plupart des pays effectuent, en général, un

NOMBRE DE PAYS INDEPENDANTS AYANT EFFECTUE UN RECENSEMENT DE POPULATION DURANT CHACUNE DES DECADES DE LA PERIODE DE 1855 à 1954



recensement tous les dix ans, lorsque les statistiques de cet ordre n'ont pas plus de dix ans elles peuvent être considérées comme fournissant des renseignements "récents". Par suite, quoique ces dénombrements effectués immédiatement après la guerre aient dispersé les recensements sur un plus grand nombre d'années que d'ordinaire, ils n'ont pas réduit la quantité de renseignements démographiques relativement récents dont on peut disposer sur le plan international.

Il est certain qu'un gros effort dans le domaine statistique a été accompli par la plupart des pays du monde. Pris dans leur ensemble, les recensements qui ont eu lieu depuis 1945 constituent ce qu'il a de plus proche d'un "recensement du monde", que les recensements effectués à n'importe quelle autre période dans le passé. Lorsqu'on souligne ces progrès encourageants ce n'est nullement pour en conclure que les pays ont effectué des recensements seulement à la suite de l'intérêt et des efforts prodigués par des organisations internationales. D'autre facteurs ont contribué à ce succès et, en particulier, la reconnaissance par les gouvernements de la valeur et de l'utilité des statistiques de toutes sortes pour l'établissement de programmes économiques et sociaux visant au bien-être de la population. Les statistiques démographiques ont bien eu leur part des progrès remarquables observés dans toutes les branches de la statistique sur les cinq continents.

ROLE DES ORGANISATIONS INTERNATIONALES EN MATIERE DE RECENSEMENT

Il est évident que l'exécution d'un recensement est une préoccupation essentiellement nationale. En d'autres termes, il appartient à chaque gouvernement soit d'instituer ou de continuer la tradition d'effectuer des recensements périodiques, soit de se prononcer contre elle. Comme un recensement de population constitue un rassemblement massif de données portant sur l'ensemble de la population d'un certain territoire, il est nécessaire que le gouvernement l'autorise, fournisse les crédits indispensables au déroulement de ses diverses phases, mette au point son organisation et prennent des dispositions pour l'exécution des différentes opérations. De ce fait, on peut dire que le mérite d'effectuer un recensement couronné de succès revient à chaque gouvernement, en général, et au personnel chargé d'organiser et d'exécuter ce recensement, en particulier.

L'histoire de la coopération internationale dans le domaine des recensements de population révèle cependant que les organisations internationales y ont une place importante. On ne sait exactement quand les pays ont commencé à échanger des renseignements sur ce sujet. Ce qui est certain, c'est que le Premier Congrès International de Statistique qui se tint à Bruxelles en 1853 adopta une résolution capitale, probablement la première recommandation internationale officielle dans ce domaine. Cette résolution énumérait les conditions fondamentales susceptibles de provoquer une certaine comparabilité sur le plan international entre les données fournies par les recensements et recommandait la normalisation des techniques de dénombrement.[1] Depuis cette époque, plusieurs conférences statistiques internationales, congrès et groupes de travail, forts de l'appui de différents gouvernements, se sont penchés sur le problème qui consiste à améliorer la comparabilité des statistiques de recensement. Les efforts récents, dans ce sens, sur le plan international ont porté sur les recensements effectués en 1950 ou autour de cette date. Ils ont surtout été marqués par une participation active des Nations Unies, de certaines de ses institutions spécialisées et de groupements statistiques régionaux tels que l'Institut Interaméricain de Statistique. Un aperçu de ces activités est donné un peu plus loin dans le paragraphe qui s'y rapporte.

Tandis que la plupart des travaux des organisations internationales ont été orientés vers une amélioration de la comparabilité des données fournies par les recensements, le but principal minimum poursuivi au cours de ces dernières années a été de voir exécuter dans chaque pays au moins, un dénombrement quelconque de la population. Bien qu'on ne soit pas arrivé à atteindre l'idéal d'un ensemble de recensements nationaux simultanés qui permettrait d'appeler l'opération "recensement du monde", on peut tout au moins se réjouir en constatant que les pays ont souscrit à cette recommandation[2] dont le succès est illustré par le nombre grandissant des recensements de population qui ont eu lieu. Il semble que le rôle dominant des organisations internationales en ce domaine est de compléter les activités de chaque pays en matière de recensement en offrant diverses formes de coopération technique.

LES RECENSEMENTS DE 1950 ET L'ACTIVITE DES NATIONS UNIES

Dès 1947, plusieurs organismes des Nations Unies commencèrent à s'intéresser aux recensements de population projetés pour 1950 ou les années suivantes dans les diverses parties du monde. La Commission de la Population et la Commission de Statistique du Conseil Economique et Social adoptèrent plusieurs résolutions à propos de ces recensements.

A sa première session, qui se réunit en janvier et février 1947, la Commission de Statistique se félicita des dispositions prises pour réaliser, dans un cadre de coopération, le recensement de la population des pays américains et exprima sa conviction que les Etats Membres tireraient grand profit de cette entreprise réalisée en commun et susceptible d'inspirer utilement les autres pays du monde nourrissant des projets similaires.[3]

A sa première session, qui eut lieu en février 1947, la Commission de la Population examina les projets relatifs à un recensement mondial de l'agriculture et au recensement du continent américain de 1950, reconnut que ces entreprises constituaient une étape importante dans le développement de plans coordonnés de recensement à l'échelle mondiale et exprima son désir d'encourager de semblables initiatives dans d'autres parties du monde.

La commission admit qu'il ne serait guère possible de projeter pour 1950 un recensement complet de la population mondiale, mais estima que l'on pouvait grandement améliorer la coordination des recensements envisagés pour 1950 ou environ et invita le Secrétariat à encourager et aider les Etats Membres à cette fin[4].

L'activité manifestée par les Nations Unies au sujet des recensements de population de 1950 a sa source non seulement dans les résolutions déjà citées mais encore dans d'autres initiatives prises en 1947 et 1951. C'est ainsi que, à sa quatrième session, le Conseil Economique et Social adopta une résolution priant "le Secrétaire général d'offrir ses conseils et son aide aux Etats Membres qui sont disposés à procéder à des recensements comparables"[5]. A la suite de résolutions de cet ordre les Nations Unies mirent au point un programme d'assistance technique pour les pays projetant un recensement de population en 1950 ou les années suivantes. Ce programme était principalement orienté dans les quatre directions décrites dans les lignes qui suivent.

Etudes méthodologiques

De 1947 à 1949 une série d'études sur les *méthodes de recensement* a été rédigée en commun par le Secrétariat de l'Organisation des Nations Unies, l'Organisation Mondiale pour l'Alimentation et l'Agriculture ainsi que le Bureau International du Travail. Ces études qui reposaient sur un examen des méthodes utilisées par une cinquantaine de pays à l'occasion des recensements effectués aux environs de 1940 furent plus tard réunies en trois publications fondamentales: *Méthodes de recensement de la population,* Etudes démographiques, No. 4, Lake Success, New York, 1949; *Application des normes internationales aux données sur la population active fournies par les recensements,* Etudes démographiques, New York, 1951; et *"Handbook of Population Census Methods",* Etudes méthodologiques, Série F, No. 5, New-York, juin 1954. Cette dernière publication renferme le texte des recommandations en vue des recensements de 1950 qui ont été adoptés par la Commission de la Population et la Commission de Statistique des Nations Unies ainsi que celles exprimées par l'Institut Interaméricain de Statistique à l'usage des pays du continent américain.

Etablissement de normes

Les normes adoptées pour les recensements de 1950 reposent sur les définitions, classifications et méthodes utilisées dans les divers pays. Elles ont été élaborées par la Commission de la Population et la Commission de Statistique au cours d'une série de sessions qui eurent lieu pendant les années 1947 à 1951. L'Organisation des Nations Unies pour l'Alimentation et l'Agriculture, le Bureau International du Travail et l'Institut Interaméricain de Statistique ont pris part à la rédaction de la forme définitive de ces recommandations relatives aux sujets sur lesquels il était désirable de recueillir des données, aux définitions-types et aux opérations d'exploitation. Un examen des méthodes employées au cours des derniers recensements a permis de se rendre compte que de nombreux pays s'étaient fortement inspirés de ces recommandations.

Formation du personnel et démonstration pratique

Depuis 1948 plusieurs centres de perfectionnement ont été réunis spécialement en vue des recensements de 1950. Quatre centres régionaux de spécialisation en matière de recensement de la population et de l'agriculture ont été organisés par les Nations Unies, l'Organisation des Nations Unies pour l'Alimentation et l'Agriculture, d'autres institutions spécialisées et les gouvernements intéressés[6]. Un des aspects les plus importants de ces centres de spécialisation a été la place réservée à l'application pratique des techniques de recensement allant depuis la rédaction du questionnaire à la préparation et l'exécution de recensements d'essai. Les cours donnés à ces centres ont été suivis par 189 spécialistes et fonctionnaires qui eurent, pour la plupart, l'occasion de mettre en pratique les connaissances acquises en participant à la préparation et à l'exécution du recensement de leur pays. En plus de ces centres principalement organisés par les Nations Unies et l'Organisation des Nations Unies pour l'Alimentation et l'Agriculture, le Bureau de statistique contribua à plusieurs projets destinés à former des spécialistes pour les opérations d'exploitation des données et prit part à de nombreuses autres conférences et groupes de travail réunis à des fins de perfectionnement en matière de recensement.

Conseils d'experts

Une autre forme d'assistance technique dans le cadre du programme de recensement de 1950 résidait dans la disposition prévoyant que les Nations Unies pourraient mettre les services d'un expert à la disposition des gouvernements intéressés. Sur leur demande, plusieurs pays reçurent l'assistance des Nations Unies pour une ou plusieurs phases du recensement (préparation, dépouillement et exploitation, publication), tandis que quelques uns d'entre eux disposèrent des services d'un expert pour mener à bien l'ensemble de l'opération. Parmi ces pays on peut citer la Bolivie, la Birmanie, le Chili, la Colombie, l'Equateur, la Grèce, la Libye, le Pakistan, le Panama et le Paraguay. Cette forme d'assistance a été particulièrement efficace surtout dans les pays où des données sur l'état de la population manquaient sur de longues périodes.

On considère justement les recensements de population effectués dans plusieurs parties du monde en 1950 ou aux environs de cette date comme la réalisation la plus remarquable de toute l'histoire des recensements, compte

[4] Nations Unies. Conseil Economique et Social. Procès verbaux officiels. Deuxième année. Quatrième session. [6] Nations Unies. Bureau de statistique. *Rapport sur le Centre de Spécialisation en matière de Statistique et de Recensement pour l'Amérique latine,* réuni à Mexico du 2 septembre au 10 décembre 1948. Etudes statistiques Série M, No. 2, 22 février 1949; *Rapport sur le Centre européen d'application statistique agricole et démographique,* réuni à Paris du 26 septembre au 20 décembre 1949, Etudes statistiques Série M, No. 5, 30 mars 1950; *Rapport sur le Centre international de spécialisation en matière de Statistique et de Recensement* réuni au Caire, Egypte, du 10 octobre au 22 décembre 1949, Etudes statistiques Série M, No. 6, 30 avril 1950 et *"Report on the International Training Centre on Censuses and Statistics for Southeast Asia and Oceania",* réuni à New-Delhi et Calcutta, Inde, du 1er novembre 1949 au 10 février 1950, Etudes statistiques Série M, No. 7, 30 octobre 1950.

tenu du volume de la population dénombrée, du nombre de pays ayant participé à ce programme, du degré de coopération internationale, de l'emploi de techniques modernes, de l'établissement et de l'application des recommandations internationales, etc. Il reste cependant beaucoup à faire pour améliorer la portée, la qualité et la comparabilité des statistiques fournies par les recensements. Du fait même que les recensements de population sont en général une opération décennale il est évident que par économie et si l'on désire qu'ils soient effectués dans les meilleures conditions, ils doivent faire l'objet d'une préparation minutieuse mise au point longtemps à l'avance. Les Nations Unies ont déjà institué un programme de travaux ayant trait aux recensements de population qui seront effectués en 1960 ou aux alentours de cette date. Grâce à l'expérience acquise au cours du programme de recensement de 1950, on espère que les dénombrements de 1960 seront encore supérieurs à ces derniers aussi bien en ce qui concerne la qualité que la comparabilité des données obtenues.

CHAPITRE II CONSIDERATIONS SUR LES TABLEAUX STATISTIQUES

ORIGINE DES DONNEES

Les séries présentées dans l'*Annuaire démographique* sont celles communiquées au Bureau de statistique des Nations Unies par les services officiels de statistique des divers pays et territoires du monde, complétées, dans la mesure du possible, par des données empruntées aux publications officielles de ces différents pays et territoires. Les statistiques sont reçues des gouvernements au moyen de questionnaires rédigés à cet effet ou au cours d'un échange de correspondance.

Ainsi, toutes les données de base de l'*Annuaire* sont des statistiques officielles récentes. Lorsqu'on constate des disparités entre les données publiées dans les éditions antérieures et celles-ci, c'est que ces dernières reflètent les rectifications signalées au Bureau de statistique jusqu'à la date du 1er novembre 1955. Afin d'établir une certaine comparabilité dans les méthodes de calcul, tous les taux autres que les valeurs des fonctions considérées dans les tables de mortalité, à l'exception d'un cas ou deux signalés dans les tableaux, ont été calculés au Bureau de Statistique de l'Organisation des Nations Unies selon la méthode décrite plus loin dans le paragraphe qui s'y rapporte. Les chiffres de population utilisés pour calculer les taux sont des résultats de recensements ou des estimations officielles publiés dans cette édition ou une édition antérieure de l'*Annuaire*.

PORTEE GEOGRAPHIQUE ET ETHNIQUE

Conformément aux résolutions adoptées lors de l'établissement du programme de l'*Annuaire démographique*[1], on s'est proposé de rendre la portée géographique de chaque tableau aussi large que possible. Cela signifie que l'*Annuaire* présente dans chaque tableau autant de statistiques nationales qu'il en a reçues des différents pays. Cependant, lorsqu'il n'a pas été possible d'obtenir des statistiques sur l'ensemble du territoire ou de la population, des données ont été indiquées pour certains groupements ethniques, pour des "zones d'enregistrement" et même pour des villes seulement, lorsqu'on a jugé que ces chiffres limités présentaient encore assez d'intérêt pour être publiés ici.

Le chiffre absolu de la population d'un pays donné ou l'importance du nombre des naissances, décès, mariages et divorces y ayant lieu, ont été les facteurs déterminant la publication ou la non-publication des statistiques correspondantes. Aucun minimum n'a été fixé, mais il est certain que l'importance des nombres en cause a limité considérablement la portée des tableaux les plus complexes où la multiplicité des entrées a fini par produire dans certains cas des chiffres nuls ou négligeables. On s'est également fondé sur l'importance relative des cas dans lesquels la caractéristique d'après laquelle est classée la population n'est pas connue (catégorie "inconnue" ou "non spécifiée") pour inclure ou non un territoire donné dans certains tableaux.

En général, les tableaux contenant des taux ont une portée plus restreinte que ceux qui présentent des chiffres absolus. Bien qu'aucun critère constant n'ait été suivi, les taux bruts reposant sur des effectifs inférieurs à 15 n'ont pas été calculés; il en a été de même pour les taux spécifiques lorsque la répartition considérée portait sur des effectifs inférieurs à 50.

Un autre facteur limitatif, particulièrement en ce qui concerne les tableaux renfermant des taux spécifiques, est la nécessité de disposer à la fois de deux éléments constitutifs des taux, c'est-à-dire, les statistiques de l'état civil et le chiffre de la population, pour la même année et le même territoire. Faute des éléments qui viennent d'être mentionnés la portée des tableaux 21, 23 et 27, présentant des taux selon l'âge et le rang de naissance, a été fortement réduite.

NOMENCLATURE

Les noms des différents pays et territoires pour lesquels des données sont présentées sont ceux d'acceptation courante. Le tableau 1, où figurent les noms de tous les pays et territoires importants du monde, contient la liste officielle des unités politiques ou géographiques sur lesquelles le Bureau de statistique possédait des renseignements au milieu de l'année 1955. Il peut donc être considéré à cet égard comme le tableau de référence de l'*Annuaire*.

Faute de place et pour des raisons d'ordre pratique, les noms de pays sont généralement donnés sous leur forme abrégée dans la mesure où celle-ci est universellement reconnue et d'usage courant. C'est ainsi que la République des Philippines est désignée sous le nom de "Philippines", les Etats-Unis du Brésil sous celui de "Brésil", les Etats-Unis d'Amérique sous celui de "Etats-Unis", le Royaume Hachémite de Jordanie sous celui de "Jordanie" et le Royaume-Uni de Grande-Bretagne et d'Irlande du Nord sous le nom de "Royaume-Uni". Pour la même raison, la République Fédérale Allemande et la République Démocratique Allemande figurent respectivement dans tous les tableaux, sauf le tableau 1, sous le nom d'Allemagne Occidentale et d'Allemagne Orientale. On trouvera seulement au bas du tableau 1, une note indiquant la désignation exacte et la composition de ces deux unités politiques.

[1] Organisation des Nations Unies. *Rapport de la Commission de la population* (deuxième session). Document des Nations Unies E/571, annexe A, page 11.

Les modifications survenues dans les noms de pays dont le Bureau de statistique a eu connaissance depuis la dernière édition de l'*Annuaire* ont été reproduites dans celle-ci. Ainsi, la Fédération du Nigéria, qui a été instituée le 1er octobre 1954, figure dans les tableaux sous son nouveau nom suivi, lorsque c'est possible de celui des régions et divisions administratives qui la compose. La Rhodésie du Nord, la Rhodésie du Sud et le Nyassaland sont indiqués en retrait au-dessous de la Fédération de Rhodésie et du Nyassaland. L'Afrique-Occidentale Espagnole figure à présent dans les tableaux avec ses subdivisions d'Ifni, de la Zone du Nord, du Rio de Oro et de Saghiet-el-Hamra. La Zone du Sud du Maroc Espagnol est comprise dans la Zone du Nord de l'Afrique-Occidentale Espagnole.

On remarquera également que deux unités géographiques autrefois présentées séparément ne se trouvent plus dans les tableaux. Il s'agit du territoire libre de Trieste partagé entre l'Italie et la Yougoslavie en octobre 1954 et de l'Inde Française dont les quatre derniers comptoirs font partie de l'Inde depuis le 1er novembre 1954.

DISPOSITION DES PAYS DANS LES TABLEAUX

La disposition des noms de pays dans la colonne de gauche et dans les en-têtes des tableaux est la même que celle qui a été adoptée dans la dernière édition (1954) de l'Annuaire. Dans le tableau 1, toutes les principales unités politiques ou géographiques du monde présentées par continent, continuent à être groupées dans l'ordre alphabétique anglais d'après leur status administratif. Le tableau 2 ne donne des chiffres que pour les continents et les principales régions géographiques. Les pays et territoires pour lesquels on dispose de statistiques figurent dans les tableaux 3 à 32, par continent et dans l'ordre alphabétique anglais. Les noms des pays indépendants sont donnés séparément, les initiales de l'autorité administrative (Royaume, commonwealth, Union, République, etc.) apparaissent entre crochets après le nom des pays d'outre-mer, territoires, colonies, protectorats et dépendances.

La présentation adoptée dans ces tableaux ne peut-être considérée, en aucun cas, comme la reconnaissance officielle de la part des Nations Unies du statut ou des frontières des pays et territoires qui s'y trouvent présentés ou décrits; elle ne l'a été que pour donner un cadre géographique commode aux séries statistiques publiées. La même observation s'applique à toutes les notes et précisions fournies sur les unités géographiques ou politiques pour lesquelles des données sont présentées.

OBJET DES DONNEES

En général, les statistiques publiées dans l'*Annuaire* se rapportent au territoire "actuel" (1955) des unités politiques ou géographiques indiquées. Lorsque le territoire sur lequel portent les données est autre que celui de 1955, on a signalé à l'aide de notes dans quelle mesure il diffère du présent territoire du pays en cause. Lorsque pour mieux comprendre ce que représentent les statistiques il est nécessaire de connaître la définition du "territoire actuel", une brève description du territoire en question est donnée en note dans le tableau 1.

Il existe une exception à ce principe chaque fois que les données se rapportent à l'année durant laquelle ont eu lieu les dernières modifications territoriales. Dans ce cas, on a souvent accompagné les chiffres d'une note explicative même lorsque les données se rapportent au "territoire actuel."

En rassemblant des statistiques nationales pour les publier dans l'*Annuaire,* on s'est proposé de présenter des données relatives à la population présente ou population de fait plutôt qu'à la population de résidence habituelle ou population de droit. Ainsi, sauf indication contraire, les séries comprennent les tribus de la jungle, les aborigènes, les nomades, les personnes déplacées, celles internées dans des camps, et les réfugiés.

L'exception la plus importante à ce principe concerne les chiffres de population. Lorsqu'on disposait des statistiques nécessaires, on a rectifié les chiffres correspondants à la population présente de manière à ce qu'elle englobe les forces armées nationales en garnison hors du pays mais non pas les troupes étrangères et les prisonniers de guerre ennemis s'y trouvant.[2] Ces ajustements sont signalés dans les tableaux renfermant les chiffres de population et également dans ceux ou ces derniers sont utilisés pour le calcul des taux.

EVALUATION DE LA QUALITE DES DONNEES

Les variations connues dans les définitions et les méthodes de calcul sont, comme à l'ordinaire, signalées en notes au bas des tableaux. Les conséquences de ces définitions, ainsi que les sources les plus communes d'erreurs techniques et de mauvaise interprétation des données, sont exposées dans le texte commençant à la page 52.

Comme dans les éditions précédentes de l'*Annuaire,* les dernières estimations officielles de population, en l'occurrence celles de 1954, ont été classées par type d'estimation et les statistiques de l'état civil récentes ont été évaluées en fonction du caractère plus ou moins complet de leurs données de base. Des détails sur ces deux classifications sont fournis un peu plus loin dans le paragraphe qui s'y rapporte. Par suite du manque de place, le code permettant de distinguer les différentes catégories d'estimations de population ne figure que dans le tableau 1 et celui d'après lequel on évalue la qualité des statistiques de l'état civil ne se trouve que dans les tableaux qui indiquent l'évolution à long terme des naissances vivantes, des décès, de la mortalité infantile, des mariages et des divorces, c'est-à-dire, dans les tableaux 19, 25, 28, 30 et 31. Bien que les codes relatifs aux six catégories de statistiques n'accompagnent dans chaque cas qu'un tableau déterminé, il va sans dire qu'ils s'appliquent également aux données correspondantes publiées pour les mêmes années dans tous les autres tableaux. De ce fait, lorsque l'on utilise les statistiques d'un de ces tableaux il convient de se reporter au tableau correspondant qui retrace l'évolution à long terme du mouvement de la population si l'on désire avoir une idée de la qualité des données pour le territoire considéré. Afin de faciliter ce renvoi, le numéro du tableau à consulter est indiqué dans la note explicative qui se trouve en tête des tableaux.

On a conservé également un autre signe réintroduit dans l'édition 1953 de l'*Annuaire.* Il s'agit d'une croix (†) pour distinguer les statistiques exploitées d'après l'année de l'enregistrement de celles exploitées d'après l'année de l'événement. On ne saurait trop insister sur l'importance

[2] Des détails sur l'origine de cette façon de procéder sont donnés à la page 53.

U. OF I.
LIBRARY

de cette distinction particulièrement en ce qui concerne les naissances vivantes. Un exposé détaillé des conséquences de cette classification se trouve à la page 79.

DISPARITES ENTRE LES TABLEAUX

En préparant les tableaux pour la publication on a constaté que parfois, pour une même région et une même date, les statistiques de la population ayant trait à différentes caractéristiques ne concordaient pas. La plupart de ces différences ont été corrigées et on a rétabli la concordance des données en cause en se reportant à la source ou en se mettant en rapport avec les gouvernements intéressés. Néanmoins, il subsiste encore quelques divergences que l'on a signalées dans les tableaux à l'aide de notes.

PARTIE A — SUPERFICIE ET POPULATION

SUPERFICIE

On trouvera dans les tableaux 1, 2 et 4 de cette édition, des données sur la superficie des territoires considérés. Le tableau 1 fournit le dernier chiffre de la superficie de chaque unité géographique ou politique du monde. Le tableau 2 donne la superficie totale des continents et des principales régions géographiques tandis que dans le tableau 4 on peut suivre l'évolution de la superficie des pays et territoires dans lesquels des recensements de population ont eu lieu depuis 1850.

Tous ces chiffres de superficie sont des "totaux", c'est-à-dire, qu'ils représentent la somme de la superficie terrestre et des eaux intérieures, à l'exception des régions polaires et des îles inhabitées.

SOURCES DE VARIATIONS

La définition des "eaux intérieures" varie d'un pays à l'autre, mais elle comprend en général, les principaux fleuves, rivières et lacs. Dans certains pays on y affecte en outre la zone maritime comprise à l'intérieur des baies, des embouchures de fleuves, des fjords et des golfes. L'exactitude des chiffres de superficie reproduits pose aussi des problèmes. Certains d'entre eux proviennent d'enquêtes récentes effectuées dans les conditions scientifiques désirables; d'autres ne sont que des conjectures reposant sur des renseignements réunis au hasard. Quelques-uns de ces chiffres sont récents et permettent de suivre les modifications territoriales importantes jusqu'à 1954; d'autres le sont moins et peuvent très bien ne pas refléter toutes les rectifications de frontières survenues dans un pays donné. Comme on ignore pour beaucoup de pays la méthode d'après laquelle la superficie a été établie, la composition exacte du territoire considéré et l'époque précise à laquelle se rapporte le chiffre en cause, il n'est pas possible de procéder à des comparaisons satisfaisantes d'un pays à l'autre.

Le fait que certains chiffres sont différents de ceux publiés précédemment s'explique par la révision des estimations antérieures la modification effective de la surface terrestre ou l'utilisation de nouvelles unités de mesure dans le calcul de la superficie. Dans cette édition de l'Annuaire, la superficie est indiquée en kilomètres carrés et l'on a converti ceux des chiffres communiqués en milles carrés à l'aide de la formule: 1 mille carré = 2,589998 km². Il est certain que l'utilisation d'un autre procédé peut conduire à des résultats légèrement différents. Le fait d'avoir arrondi les produits est susceptible également d'avoir affecté la dernière décimale du chiffre publié.

POPULATION

Cette septième édition de l'*Annuaire démographique* contient, en majeure partie, des données fournies par des recensements de population. Des 32 tableaux de l'*Annuaire,* 17 présentent les résultats de recensements effectués entre 1945 et 1954, tandis que 3 renferment des estimations de population pour ces années et plusieurs autres.

Des disparités de plusieurs sortes existent entre les données. Les classifications des différents pays ne sont pas toujours identiques à la classification-type utilisée dans les tableaux; les définitions de certaines caractéristiques varient d'un pays à l'autre. Les divergences de cet ordre sont indiquées dans les tableaux dans la mesure du possible et examinées en détail en fonction des répartitions pertinentes de la population. Il y a également d'autres sources fondamentales de variations qui sont communes à toutes les statistiques de la population. Leur influence sur la comparabilité des données est examinée dans les lignes qui suivent. Parmi ces disparités on peut citer des variations dans la composition de la population totale, un défaut de comparabilité attribuable aux lacunes de certains recensements, et également la difficulté d'arriver à une appréciation satisfaisante des estimations de population.

SOURCES DE VARIATIONS

1. Définition de la population totale

Il convient de ne pas perdre de vue la variété qui existe dans la composition de la population totale suivant les pays lorsqu'on évalue la comparabilité des données.

Les données relatives à la population d'un pays se rapportent d'ordinaire soit à la population présente ou de fait, soit à la population légale ou de droit. Par population présente ou de fait on entend que toutes les personnes présentes dans le pays, nationaux ou étrangers, sont comptées sur le territoire où elles se trouvent au moment du recensement. Au contraire, le dénombrement de la population légale ou de droit est supposé comprendre celui de toutes les personnes qui ont leur résidence habituelle dans le pays, quel que soit l'endroit où elles se trouvent au moment du dénombrement. Aussi simple que ces critères puissent paraître il est rare de les voir appliqués strictement par aucun pays. De plus, ces termes peuvent très bien décrire la méthode d'après laquelle on a obtenu des totaux partiels régionaux sans pour cela s'appliquer

au chiffre total de la population du pays considéré. Enfin, ils peuvent faire allusion à la méthode de dénombrement utilisé, c'est-à-dire, lieu de résidence ou lieu de "présence" au moment du recensement, et être tout à fait incorrects lorsqu'ils sont appliqués à l'exploitation des données.

Les différences importantes qui existent dans la composition de la population totale des divers pays, qu'elle ait été décrite comme population présente ou population légale par le recensement en cause, apparaissent dans le tableau A, page 54, qui indique le sort réservé à certaines fractions de la population dans les recensements récents de 52 pays indépendants.

Il est évident, d'après ce tableau, qu'en plus des deux groupes importants de personnes ayant leur résidence habituelle dans le pays ou de celles qui y sont présentes au moment du recensement au moins 13 autres groupes doivent être pris en considération lorsqu'il s'agit de définir d'une façon précise la population d'un pays. Ces groupes spéciaux sont les suivants: tribus nomades; aborigènes; forces armées, nationales et étrangères, dans le pays ou hors du pays; équipages de la marine marchande dans les ports, à terre ou en mer; personnes déplacées et prisonniers de guerre ennemis dans le pays; personnel diplomatique et autres civils à l'étranger; diplomates étrangers se trouvant dans le pays, à titre permanent ou temporaire.

On ne peut même pas dire qu'il soit possible de déterminer le degré de comparabilité des données à partir d'une analyse de définitions de cet ordre. Tout d'abord, on ne dispose pas de renseignements de la sorte pour tous les pays, et même lorsqu'on est en mesure de se les procurer, il est difficile de connaître la définition exacte attribuée par chaque pays à ces différents groupes.

La notion de population légale ou de droit est encore plus "floue" dans le cas de populations effectuant des migrations périodiques, comme par exemple en Afrique. Il arrive alors que de nombreux hommes adultes appartenant aux groupes déjà mentionnés soient employés dans des pays et territoires voisins. De telles personnes sont absentes de leur tribu pour plusieurs années de suite, alors que leur famille continue à demeurer au lieu de leur résidence habituelle. En cette occurrence, la résidence légale devient le domicile plutôt que le lieu de résidence habituelle.

Il paraît donc évident que les termes de population présente et de population légale, bien qu'ils soient à présent classiques, ne peuvent donner une idée exacte de la composition de la population. En outre, comme ils ont été employés avec des sens plus ou moins différents, ils ont presque complètement perdu leur comparabilité sur le plan international. Cependant, ce sont les termes qu'on rencontre le plus communément dans les statistiques nationales et il faut continuer à les accepter tels qu'ils sont, si l'on veut pouvoir interpréter les données relatives à la population des différents pays.

En vue d'améliorer la comparabilité des données à cet égard, la Commission de la Population,[1] dans ses recommandations relatives aux recensements à effectuer aux environs de 1950, a proposé:

> . . . de recueillir des renseignements sur la population totale dans l'ensemble du pays au moment du recensement (à l'exception des militaires et du personnel diplomatique), en plus de toutes les données établies d'après une base *de jure* ou une autre base dont le pays intéressé peut désirer disposer pour ses propres besoins. Elle a recommandé, en outre, que les militaires et membres du personnel diplomatique étrangers qui se trouveront dans le pays ne figurent pas dans le total de la population, et que les militaires et le personnel diplomatique du pays intéressé qui séjourneront à l'étranger y figurent.

Conformément à cette recommandation, les chiffres de population présentés dans l'*Annuaire,* qu'il s'agisse de résultats de recensement ou d'estimations, concernent la population présente "rectifiée." Cela signifie que, dans la mesure du possible, ils sont supposés comprendre les tribus de la jungle, les aborigènes, les nomades, les personnes déplacées, les réfugiés, les forces armées nationales en garnison hors du territoire national, et exclure les forces armées étrangères et les prisonniers de guerre hors du pays.

Bien qu'il soit évident qu'une stricte comparabilité n'existe pas entre les données, il convient tout de même de souligner qu'en dépit de petites divergences entre les pays, la population de fait "rectifiée", mentionnée précédemment, et le chiffre exact de la population de droit ne sont pas vraiment différents l'un de l'autre. Comme il repose sur la notion de résidence habituelle le dénombrement de la population de droit comprend d'ordinaire les forces armées nationales à l'étranger mais pas les troupes étrangères stationnées dans le pays. Par suite, les chiffres signalés dans les tableaux comme relatifs à la "population de droit" peuvent être considérés comme correspondant à cette définition, sauf indication contraire. La principale différence entre le chiffre rectifié de la population de fait et le chiffre de la population de droit est que le premier comprend toute la population civile se trouvant dans le pays à un moment déterminé, quelle que soit sa résidence légale ou habituelle, tandis que le second englobe les résidents civils à l'étranger mais ne comprend pas la population civile non résidente qui se trouve dans le pays. Comme la définition du terme "résident" varie d'un pays à l'autre, il est parfois plus difficile de comparer les totaux relatifs à la population de droit que ceux qui portent sur la population de fait. Il convient d'ajouter cependant que, en temps normal, la différence entre les deux est relativement faible.[2]

2. Mesure dans laquelle les données sont complètes

Que le dénombrement s'applique à la population présente "rectifiée" ou à la population légale "rectifiée", l'opération qui consiste à effectuer un recensement de la population dénué d'omissions ou de doubles comptes présente d'innombrables difficultés dans n'importe quel pays. Presque insurmontables dans les pays où la population n'est pas habituée aux opérations de recensement, ces obstacles existent, à vrai dire, dans tous les dénombrements. Même dans les territoires dans lesquels un grand

[1] Comptés à part.
[2] Les indiens civilisés ou presque ont été dénombrés, mais les indiens de la jungle n'ont pas été compris dans le dénombrement.
[3] Les équipages de la marine marchande et militaires non résidents n'ont pas été compris dans le dénombrement.
[4] Une partie de la zone de tribus d'Assam n'a pas été recensée.
[5] Compris dans le total relatif à la population légale ou de droit mais exclus du total se rapportant à la population présente ou de fait.
[6] Compris dans le total relatif à la population présente ou de fait, mais exclus du total se rapportant à la population légale ou de droit.
[7] Les personnes longtemps absentes comme les prisonniers de guerre ont été dénombrées au titre d'absents.
[8] Les membres d'équipages et passagers des navires en mer ou dans des ports étrangers ont été dénombrés.
[9] Les personnes à bord de bateaux de plaisance ou de pêche rentrés au port dans un délai de trois semaines après la date du recensement sans toucher un port étranger aux Iles britanniques ont été comprises dans le dénombrement.
[10] Les aborigènes civilisés ou presque ont été dénombrés, mais on ne dispose d'aucun renseignement sur ceux vivant à l'état sauvage.

nombre de recensements a déjà été effectué, il faut s'attendre à des omissions et à des doubles comptes. Les omissions concernent le plus souvent les nouveau-nés qu'on a tendance à oublier de déclarer, les personnes de passage qui n'ont pas de domicile fixe, les tribus et les nomades qui vivent loin de tous centres administratifs organisés. Des doubles comptes peuvent se produire parmi la population de passage qui est suceptible d'être dénombrée en deux endroits différents. Il arrive quelquefois que ces deux facteurs se compensent, mais en général les omissions l'emportent et il en résulte le plus souvent que le chiffre total de la population obtenu est notablement inférieur à la réalité.

Le degré d'exactitude des recensements n'est pas connu dans la plupart des cas, mais il convient de noter que pour ce qui est des recensements récents (1950) un nombre grandissant de pays a évalué la proportion des omissions ou encore la mesure dans laquelle le dénombrement était complet. Ces pays fournissent très souvent ces renseignements avec une estimation des omissions relatives à certains groupes que l'on n'a même pas essayé de dénombrer, tels que les aborigènes.

La mesure dans laquelle les résultats étaient inférieurs à la réalité a surtout été déterminée au moyen de nouveaux comptages, c'est-à-dire, en effectuant une vérification portant sur un échantillon seulement de la population et en recherchant les questionnaires originaux afin de s'assurer que les personnes en cause avaient bien été comprises dans le dénombrement. De telles enquêtes par sondage donnent une idée du pourcentage de "sous-estimation" qui est, ensuite, souvent appliqué à l'intégralité du pays.

Une autre méthode consiste à effectuer des recoupements entre la statistique des enregistrements à l'état civil et les résultats du dernier recensement afin de déterminer l'exactitude du chiffre total de la population obtenu, ou à comparer ces résultats aux inscriptions portées sur les registres de population. On peut avoir une idée de l'importance des groupes spéciaux de population isolés qui n'ont pu être dénombrés en consultant les rapports de missionnaires et de marchands, en se basant sur le nombre d'habitations, ou en compulsant d'autres sources.

Lorsqu'on dispose de telles indications, il est possible de "rectifier" le chiffre total de la population mais on ne peut généralement pas corriger la répartition de la population si ce n'est peut-être qu'au point de vue géographique. L'utilité capitale des évaluations de cet ordre est de souligner les lacunes grandes ou petites difficiles à éviter dans les recensements les mieux organisés et exécutés, et d'encourager au maximum de précision. Afin de prévenir toute erreur d'interprétation dans l'examen des données des différents tableaux de l'*Annuaire* on a pris un soin particulier à définir les chiffres exactement, par exemple, "population effectivement dénombrée", ou "données ajustées" et à indiquer l'indice de correction.

3. Valeur des estimations de population

La valeur des estimations de population dépend de la nature et de la qualité des statistiques employées pour les établir et de la méthode utilisée. Une analyse de la méthode d'établissement des estimations de population (par exemple de celle fondée sur les questionnaires de recensement ou dérivée d'autres données) a permis de mettre au point un code assez précis pour évaluer la qualité des estimations relatives à l'année 1954. Ce code figure seulement dans le tableau 1, mais il peut être appliqué également aux estimations de la population totale pour 1954 publiées dans les tableaux 2, 3 et 10 de l'*Annuaire*.

Code permettant d'évaluer la qualité des données

Le classement des estimations de population d'après-guerre par type d'estimation a été introduit dans l'édition 1949-50 de l'*Annuaire* et a été systématiquement revu depuis conformément aux renseignements reçus. Le code employé dans cette édition est similaire à celui dont on s'est servi précédemment, mais il a été révisé pour tenir compte des recensements effectués en 1950 et aux environs de cette date dans de nombreux pays, ainsi que pour éliminer certains facteurs secondaires jusqu'ici pris en considération. Ainsi, dans le cas des recensements, le degré d'actualité est de première importance si les adaptations chronologiques reposent sur les statistiques de l'état civil et les données relatives aux migrations; cette caractéristique et la fréquence entrent toutes deux en ligne de compte si le procédé d'adaptation est une extrapolation mathématique.

Comme auparavant, le code est composé de deux éléments. Le premier, représenté par une lettre, indique la nature des données de base conformément à la classification ci-après:

R. Registres permanents de population.

A. Recensements, le dernier ayant été effectué après le 1er janvier 1950.

B. Recensements, le dernier ayant été effectué entre le 1er janvier 1945 et le 1er janvier 1950.

C. Recensements, le dernier ayant été effectué avant le 1er janvier 1945.

D. Dénombrements différents d'un recensement ou recensements partiels.

E. Evaluations conjecturales obtenues par d'autres moyens que des dénombrements.

Le second élément du code représenté par un chiffre de 1 à 8, indique le procédé employé pour adapter les données de base à des dates postérieures et, la qualité des chiffres dont on s'est servi pour effectuer l'ajustement. Quand les données de base relatives au chiffre de la population sont fournies chaque année, ce qui est généralement le cas lorsqu'il existe un registre permanent de population, aucune correction ne s'impose et le deuxième élément du symbole, dans le code est 0. Lorsque la méthode utilisée consiste en une opération de "synthèse", c'est-à-dire, un ajustement au moyen des statistiques des naissances, des décès et des migrations, on a indiqué la qualité des chiffres dont on s'est servi. Lorsque la méthode d'ajustement repose sur une interpolation or extrapolation mathématique, les estimations fondées sur trois recensements ou plus ont été rapportées à d'autres basées sur un ou deux dénombrements. Les quatre procédés d'adaptation chronologique ont été classés de la façon suivante:

0. Aucun, données de base fournies annuellement, adaptation inutile.

1. Statistiques relativement exactes des naissances et décès, et (éventuellement) données assez complètes sur les migrations.

2. Statistiques relativement exactes des naissances et décès: données sujettes à caution ou incomplètes sur les mouvements migratoires, ou aucun relevé de ces déplacements de population.

3. Statistiques des naissances et décès de qualité inconnue (il n'est pas tenu compte de l'exactitude des données relatives aux migrations).

4. Statistiques des naissances et décès signalées comme incomplètes (il n'est pas tenu compte de l'exactitude des données relatives aux migrations).

5. Extrapolation ou intrapolation mathématique, trois recensements au moins ayant été effectués depuis 1900.

6. Extrapolation ou intrapolation mathématique moins de trois recensements ayant été effectués depuis 1900.

7. Taux d'accroissement présumés, non dérivés d'une extrapolation mathématique.

8. Pas d'adaptation, donnée de base utilisée en permanence.

.. Procédé d'adaptation inconnu.

Partie alphabétique. — En général, la qualité des estimations diminue à mesure que l'on emploi de nouvelles lettres et que le chiffre est plus élevé. Ainsi, la formule "R0" du code indique que les estimations ont été obtenues directement de registres de population et qu'elles peuvent être considérées comme particulièrement satisfaisantes. On entend par registre permanent de population, un système d'enregistrement dans lequel un dossier est constitué pour chaque individu, un nouveau dossier étant ouvert à chaque naissance, un autre clos à chaque décès, des dispositions étant prises pour faire suivre les dossiers lors des changements de résidence. Dans la mesure où le chiffre de la population totale a de telles sources, la précision des estimations est relativement indépendante de la périodicité et du caractère plus ou moins récent des recensements de population ou de la compilation des statistiques des naissances et des décès à partir d'autres documents. En général, les estimations ayant pour base les enregistrements effectués dans les registres de population sont supérieures à celles fondées sur des recensements, tandis que les dénombrements autres que des recensements conduisent à des estimations encore moins bonnes.

Les estimations qui reposent sur des recensements sont signalées par les lettres "A", "B" ou "C" suivant la date du dernier d'entre eux, ainsi qu'on l'a indiqué précédemment. Aucune distinction n'a été faite quant à la qualité des recensements effectués mais il est évident que tous n'ont pas le même degré de précision.

Les estimations qui sont fondées sur des dénombrements autres que des recensements ou sur des recensements partiels sont désignées par la lettre "D". Cette catégorie couvre un assez grand nombre de genres d'estimations, y compris les chiffres des services de rationnement, les statisques fiscales, les dénombrements d'habitations, partiels ou par groupes, tels qu'ils sont pratiqués dans un certain nombre de territoires africains où la famille vivant sous un même toit, la tribu ou le village constituent autant d'unités de calcul. La précision de tels dénombrements varie considérablement, mais du fait qu'ils portent sur des groupes, ils doivent être considérés comme produisant des résultats inférieurs à ceux obtenus par la méthode d'énumération individuelle propre aux recensements. Lorsque ces dénombrements sont effectués tous les ans ("D0"), la répétition annuelle de l'opération a des chances d'améliorer le degré d'exactitude.

Les estimations fondées sur des conjectures ou des suppositions sur le chiffre de la population, faites à une certaine époque dans le passé, sont désignées par la lettre "E". De telles estimations doivent être considérées comme de simples indications sommaires sur l'importance probable de la population.

Partie numérique. — La partie numérique du code se compose de trois sortes d'adaptations chronologiques. La première d'entre elles, ajustement sur la base des statistiques des naissances, des décès et des migrations, est indiquée par le nombre "1" si les données sont tenues pour exactes par les sources officielles ou autres dignes de foi, par "2" si les éléments de l'accroissement naturel de la population sont correctement fournis mais si l'adaptation manque pour les migrations ou bien repose sur des informations insuffisantes, par "3" si l'on ne connaît pas la valeur des données relatives aux naissances et aux décès, et par "4" si l'on sait pertinemment qu'elles sont défectueuses. Pour "3" et "4" on ne tient pas compte de la qualité des données concernant les migrations.

La seconde catégorie, qui consiste en une interpolation ou une extrapolation mathématique de deux calculs de population ou plus, est en somme un procédé inférieur au premier, sauf dans le cas où les statistiques de l'état civil et des migrations sont incomplètes. Le type de courbe sélectionné et la longueur de la période comprise entre deux recensements ou écoulée depuis le dernier recensement utilisé comme base de calcul ont également une certaine influence sur la précision des estimations obtenues. Comme le fait de disposer de plus de deux recensements permet de mieux connaître l'évolution de la population dans le passé et laisse plus de latitude dans le choix de la courbe, une distinction est faite entre les pays ayant effectué au moins trois recensements depuis 1900, indiqués par le chiffre "5", et ceux dans lesquels moins de trois de ces opérations ont été exécutées ("6").

La troisième sorte d'adaptation, taux d'accroissement présumé non dérivé d'une interpolation ou d'une extrapolation mathématique, est désignée par le chiffre "7". Les estimations obtenues de cette façon peuvent contenir des erreurs considérables surtout si le procédé est appliqué longtemps. C'est là un système généralement employé lorsque l'absence de données de base ou de renseignements relatifs aux changements de population ne permet pas de recourir à une méthode plus éprouvée.

Une estimation dont la valeur a été maintenue identique à celle de la donnée de base, indiquée par le chiffre "8", est en général celle à laquelle on peut le moins se fier. Elle est souvent la caractéristique d'un défaut de renseignements sur le chiffre exact de la population aussi

bien que sur les taux de variation qui lui sont applicables.[3]

Valeur du code. — Les combinations variées de lettres et de chiffres ne constituent pas forcément une gradation descendante allant des données les meilleures aux moins bonnes. Ceci, non seulement à cause des facteurs énumérés dans le paragraphe précédent, mais aussi parce qu'une série d'estimations peut se trouver dans une position privilégiée à l'égard d'une partie du code et moins favorable par rapport à l'autre. Il est difficile sinon impossible de classer de tels cas selon une échelle de valeurs. Toutefois, on peut dire avec quelque certitude que l'association de "R", "A", "B", avec "0", "1", et "2" est la marque d'estimations auxquelles ou peut se fier, que les combinaisons de lettres et de nombres se trouvant à la partie inférieure de l'échelle sont le signe de données de qualité discutable, et que les autres associations représentent des variations assez larges dans l'échelle des valeurs.

Application du code. — Bien que le code ne figure que dans le tableau 1, il s'applique à toutes les estimations relatives à l'année 1954 où qu'elles se trouvent dans l'*Annuaire*.

Dans les pays où l'on a l'habitude d'effectuer des recensements de population, on peut supposer que la classification indiquée s'applique également à toutes les séries d'après-guerre 1947-1954. Mais pour les nombreux territoires dans lesquels on a effectué un recensement pour la première fois depuis de nombreuses années le code n'est valable que pour les estimations établies après le recensement.

DESCRIPTION DES TABLEAUX

1. Répartition géographique

Tableau 1

La présentation du premier tableau de cet ouvrage a été modifiée pour cette édition de l'*Annuaire*. Il continue à renfermer des données sur la population totale, la superficie et la densité de tous les pays et territoires du monde qui ont communiqué ces renseignements, mais il indique en outre les résultats officiels, par sexe, des derniers recensements de population. On y trouvera toujours l'estimation classique de la population pour 1937, rapportée au territoire actuel du pays considéré, tandis que les estimations pour les trois années d'après-guerre publiées dans les éditions précédentes de l'*Annuaire* y sont remplacées par une seule, la dernière, c'est-à-dire dans la plupart des cas, pour 1954. La superficie actuelle des pays et territoires considérés ainsi que la densité de la population au km² sont également indiquées dans ce tableau.

Le tableau 1 est le seul de l'*Annuaire* qui présente les unités politiques et géographiques d'après leur statut administratif, c'est-à-dire en tant que pays indépendants, territoires, colonies, protectorats, dépendances, condominiums ou placés sous une forme quelconque d'administration internationale ou militaire. Dans la mesure du possible, les désignations reflètent la situation au milieu de l'année 1955. Cependant, lorsque la révision du statut aurait entrainé le passage d'un territoire d'un continent à un autre du point de vue de la classification (par exemple intégration du Groenland devenu département danois) on s'est borné à indiquer cette modification en note sans rien changer à la disposition des pays dans le tableau. La classification à laquelle on vient de faire allusion ainsi que les notes abondantes qui décrivent d'une manière beaucoup plus détaillée qu'ailleurs les divers territoires font de ce tableau, le tableau de référence du volume pour ce qui est de la composition territoriale des différents pays représentés dans l'*Annuaire*.

Sauf indication contraire, les données se rapportent à la population présente "rectifiée" dont il a été question à la page 53. Dans la mesure du possible, les chiffres se trouvant dans la colonne des recensements du tableau 1 correspondent à la population effectivement dénombrée lors du dernier recensement "véritable" du pays considéré, qu'il ait ou non porté sur la superficie totale du pays, sur une fraction de cette superficie, sur une partie seulement de la population et quelle que soit l'importance des lacunes du recensement. On a indiqué en note les estimations officielles pour les groupes non recensés et celles établies pour évaluer les lacunes du dénombrement; les résultats des "dénombrements de contrôle", qui ne sont pas considérés comme faisant partie du recensement, ne sont pas publiés.

Par "véritable" recensement on entend, en général, celui qui a été effectué à l'aide de questionnaires individuels ou familiaux, bien que quelques recensements "par groupes" aient été acceptés lorsqu'on a su qu'ils avaient été exécutés dans des conditions scientifiques. L'inclusion de tous les "véritables" recensements, qu'ils aient porté ou non sur l'ensemble ou partie seulement de la population font du tableau 1 le tableau de référence du volume pour ce qui est des recensements effectués dans le monde. On peut voir ainsi très rapidement les pays qui n'ont jamais exécuté de recensements "véritables", ceux qui ont effectué des recensements limités, et ceux dans lesquels ont eu lieu de "véritables" recensements à l'échelle nationale.

Les estimations se rapportent en général à la population au milieu de l'année considérée c'est-à-dire au 1er juillet. Cependant, en l'absence d'une estimation au milieu de l'année on a fait la moyenne de deux estimations successives de fin d'année (31 décembre). Aucune discrimination n'a été faite entre ces deux sortes d'estimations, les différences en cause étant négligeables. Lorsqu'on ne disposait pas d'estimations de la population mais de résultats de recensements pour la même année, ceux-ci ont été indiqués en italiques dans la colonne des estimations afin de les distinguer aisément des estimations au milieu de l'année.

Dans les quelques cas où on ne disposait ni d'une estimation de la population ni de résultats de recensements, des estimations non officielles de la population ont été publiées pour 1954 afin de ne pas réduire la portée géographique du tableau et de donner une idée au moins de la population de chaque pays et territoires représentés. Ces estimations non officielles sont reconnaissables dans le tableau au signe (x) qui les précède.

Les données relatives à la superficie, exprimées en kilomètres carés, correspondent à la superficie totale des unités politiques ou géographiques considérées, y com-

[3] On trouvera des explications plus détaillées sur les éléments du code dans le document suivant: *Méthodes d'estimation de la population totale à une date actuelle,* Manuel 1, Méthodes d'estimation de la population, Organisation des Nations Unies, Département des questions sociales, Division de la population, Document ST/SOA/Série A, Etudes démographiques No. 10, New-York, 1952, 45 pages.

pris les eaux intérieures et les régions inhabitables ou inhabitées que peut comprendre le territoire en question. Les régions entièrement inhabitées, telles que les régions polaires et certaines petites îles, ne sont pas mentionnées dans le tableau et ne sont évidemment pas comprises dans les statistiques. Ces estimations de la superficie sont des chiffres officiels, sauf si elles sont accompagnées du signe (x). Les superficies communiquées en milles carrés ont été converties en kilomètres carrés au moyen du coefficient 2,589998.

Portée: 267 pays et territoires sont représentés dans le tableau, qui indique le chiffre total de la population du monde et des différents continents. De ce fait, ce tableau est le plus complet de l'*Annuaire*.

Dans la mesure du possible, on a essayé de faire figurer dans ce tableau, les parties ou éléments qui constituent chaque "ensemble" de territoires. Comme dans l'édition de 1954, on a utilisé des caractères d'imprimerie plus petits pour distinguer les parties d'un "ensemble" ou d'un territoire. Lorsqu'il n'a pas été possible de présenter séparément les éléments d'un "ensemble" géographique ou politique, sa composition est donnée en note.

Calcul de la densité: La densité exprime le nombre de personnes dans la population totale en 1954 par km² de territoire. On l'a calculée pour chaque pays et territoire au sujet desquels on disposait des chiffres nécessaires. En l'absence d'une estimation de la population pour 1954 on a utilisé celle relative à l'année 1953. Comme la densité n'est pas affectée d'une façon sensible par une légère variation de l'effectif de la population, on a pensé que la substitution du chiffre de 1953 à celui de 1954 donnerait encore un résultat satisfaisant. D'ailleurs les chiffres de densité ne sont que des indices assez grossiers du nombre de personnes par unités de superficie car ils ne reflètent en aucune manière la concentration de la population dans certaines zones particulières du pays considéré.

Insuffisances des données: Les données contenues dans ce tableau sont affectées des mêmes insuffisances que celles qui s'appliquent aux statistiques de la population en général, à savoir, variations dans les définitions et les méthodes d'exploitation, variété de la mesure dans laquelle le dénombrement est complet, et différences dans la méthode d'établissement des estimations, toutes ces questions ayant été examinées précèdemment à la page 52.

Pour connaître exactement la signification des termes de "population présente ou de fait" et de "population légale ou de droit" rencontrés dans ce tableau il convient de se reporter au tableau A, page 54. Chaque fois que ce renseignement a été fourni au Bureau de statistique on a indiqué la proportion dans laquelle les recensements étaient complets. Une idée de la valeur des estimations de population est donnée par le code déjà décrit qui se trouve dans ce tableau. Ce code s'applique aux estimations officielles pour 1954, à moins d'indication contraire en note. En plus des renseignements sur les lacunes des recensements ce code permet de se faire une idée assez précise de la qualité des estimations de la population totale pour 1954 publiées dans l'*Annuaire*. Une explication des éléments du code est donnée à la fin du tableau ainsi qu'à la page 55.

La comparabilité des chiffres de superficie est compromise par toutes les considérations exposées à la page 52. Les disparités importantes entre les superficies publiées dans ce volume et celles qui figuraient dans le tableau correspondant de la dernière édition de l'*Annuaire* sont en général le résultat de nouveaux arpentages ou de l'amélioration des estimations, quoique dans quelques cas une modification de la superficie terrestre du pays se soit produite grâce à des gains de terrain sur la mer, à la construction de digues, etc. Des différences d'ordre secondaire peuvent provenir de la conversion des milles carrés en kilomètres carrés; dans ce volume, cette conversion a été effectuée au moyen de la formule—type: 1 mille carré = 2,589998 kilomètres carrés.

Tableau 2

Ce tableau présente les estimations de la population de chaque continent par région à intervalles décennaux de 1920 à 1950 et pour l'année 1954 et indique également la superficie en kilomètres carrés et la densité de la population. Un aperçu de la qualité des estimations de la population pour 1954 est donné sous la forme de marges d'erreur présumées et l'on peut supposer que pour les années plus anciennes les mêmes pourcentages d'erreur s'appliquent aussi dans la plupart des cas.

Portée: Les régions ont été délimitées en fonction des frontières actuelles *de facto* et tous les chiffres des années antérieures, révisés pour tenir compte des modifications territoriales intervenues, se rapportent à des superficies constantes. Les 14 régions sur lesquelles on a fourni des statistiques sont constituées de la façon suivante:

(1) *Afrique Septentrionale:* Afrique occidentale espagnole, Possessions espagnoles de l'Afrique du Nord, Maroc, Tanger, Algérie, Tunisie, Libye, Egypte, Soudan, Erythrée, Ethiopie, Somalies.

(2) *Afrique Tropicale et Méridionale:* le reste de l'Afrique.

(3) *Amérique du Nord:* Alaska, Bermudes, Canada, Etats-Unis, Saint-Pierre-et-Miquelon, Groenland.

(4) *Amérique Centrale:* le reste de l'Amérique du Nord y compris les Antilles.

(5) *Amérique du Sud:* le continent entier.

(6) *Asie du Sud-Ouest:* Turquie, Iran, Syrie, Irak, Liban, Israël, Jordanie, Chypre, la Péninsule arabe.

(7) *Asie du Sud* (partie centrale): Afghanistan, Pakistan, Inde, Népal, Bhoutan, Ceylan, les îles Maldives.

(8) *Asie du Sud-Est:* Birmanie, Thaïlande, Indochine, Péninsule malaise, Philippines, Indonésie et autres îles au sud du continent.

(9) *Asie de l'Est:* le reste de l'Asie à l'exception de la partie asiatique de l'URSS.

(10) *Europe du Nord et de l'Ouest:* Danemark, Finlande, Suède, Norvège, Islande, Royaume-Uni, République d'Irlande, Iles Anglo-Normandes, Ile de Man, Pays du Bénélux, France, Monaco.

(11) *Europe Centrale:* Allemagne, Sarre, Suisse, Autriche, Liechtenstein, Tchécoslovaquie, Pologne, Hongrie.

(12) *Europe Méridionale:* le reste de l'Europe, à l'exception de la partie européenne de l'URSS et de la Turquie d'Europe.

(13) *Océanie.*

(14) *URSS:* Union des Républiques Socialistes Soviétiques.

Insuffisances des données: Dans le présent tableau les estimations pour les pays et les régions géographiques relatives aux années 1920 à 1950 n'ont pas été modifiées, à l'exception toutefois de l'inclusion d'une nouvelle série de données sur la population de la Chine Continentale. En 1953, un nouveau chiffre de population a été communiqué pour la Chine Continentale et cette statistique est supérieure de plus de 100 millions à l'estimation établie pour 1948; a fin d'inclure cette nouvelle donnée, qui se rapporte à 1953 mais a également été utilisée pour l'année 1954, il a été nécessaire de revoir les totaux par régions géographiques, par continents, et pour l'ensemble du monde des années 1920 à 1950. Les totaux pour 1954 comprennent également cette nouvelle estimation.

Etant donné l'incertitude des connaissances acquises sur certaines parties de la population du monde on a jugé nécessaire d'indiquer, sous la forme de pourcentages, une marge d'erreur présumée pour chaque estimation relative à 1954 dans laquelle le chiffre exact de la population a de fortes probabilités d'être compris. On a affecté d'un coefficient de pondération convenable les erreurs présumées dans les estimations de chaque pays en partant de l'hypothèse que les erreurs pour chaque pays ne sont pas entièrement sans rapport et qu'elles tendent à se compenser dans les totaux par régions. Ce procédé a été également appliqué pour l'obtention des totaux continentaux et du total pour l'ensemble du monde. Les résultats ont été exprimés sous la forme de pourcentages se rapportant aux chiffres pour 1954, ramenés à 1, 2 ou 5 pour cent. Du fait de l'importance du chiffre de la population en cause l'erreur présumée pour l'estimation relative à la Chine peut avoir une grande influence sur la marge d'erreur possible pour le total pour l'Asie et même sur l'estimation se rapportant à l'ensemble de la population du monde.

Il convient de remarquer qu'en établissant les estimations de ce tableau on a tenu compte dans une certaine mesure de ce que plusieurs recensements avaient donné des résultats inférieurs ou supérieurs à la réalité. De ce fait, les totaux partiels par régions et par continents ne correspondent pas nécessairement à ceux que l'on obtiendrait en additionnant les divers éléments constitutifs du tableau 1 bien que, dans tous les cas, ces totaux partiels soient compris dans l'intervalle d'erreur indiqué au tableau 2.

Les superficies totales en kilomètres carrés, par régions, continents et celle relative au monde entier, ont été obtenues en additionnant les chiffres concernant les différentes unités politiques ou géographiques qui figurent dans le tableau 1; en conséquence, ces superficies comprennent les eaux intérieures, mais non les régions polaires et quelques petites îles désertes. En prenant connaissance de la densité moyenne de la population il conviendra de garder à l'esprit que dans la plupart des régions géographiques de vastes étendues de terre sont à peine habitables.

Tableau 3

Des estimations officielles de la population totale pour les années 1920, 1925, 1930, 1935, 1940 et pour chaque année de la période 1942-1955 sont présentées dans le tableau 3. Tous les chiffres sont exprimés en milliers et ont été arrondis à l'unité supérieure au Bureau de Statistique, lorsqu'ils dépassaient la cinquième décimale.

A moins d'indication contraire, toutes les estimations se rapportent à la population présente "rectifiée" des pays considérés, voir page 52, au milieu de l'année civile (1er juillet). Lorsque les estimations officielles n'étaient disponibles qu'au 31 décembre, la moyenne arithmétique de deux estimations successives de fin d'année a été calculée et est présentée dans ce tableau comme une estimation au milieu de l'année. Dans certaines éditions précédentes de l'*Annuaire,* la discrimination entre les estimations au 1er juillet et celles résultant de moyennes était faite en note. Cette distinction n'a pas été maintenue dans le présent tableau, les différences en cause étant négligeables. Dans les quelques cas où les estimations officielles sont régulièrement établies à une date autre que le 1er juillet ou le 31 décembre, les chiffres officiels sont donnés dans le tableau avec une note précisant la date à laquelle ils se rapportent. Pour les années au sujet desquelles on disposait des résultats d'un dénombrement, on a parfois préféré à l'estimation au milieu de l'année le chiffre du recensement quelle que fût sa date, lorsque la concordance des deux données a paru insuffisante. Les chiffres de recensements ont également été publiés quand on n'a pu se procurer d'estimation correspondante pour l'année en cause. Les résultats de recensements sont en italiques dans le tableau pour permettre de les reconnaître aisément.

Portée: Ce tableau dans lequel 186 pays et territoires sont représentés est un des plus étendu de l'*Annuaire.* Les principaux pays y figurent même si les estimations de la population ne se rapportent qu'à quelques années seulement. De même on a pris pour principe dans ce tableau d'indiquer la population totale dans la mesure du possible plutôt que des totaux partiels portant sur une partie de la population seulement bien que les chiffres à partir desquels sont calculés les taux de natalité, mortalité, nuptialité, divorce, etc., y soient publiés quelle que soit la portée des statistiques indiquées.

Insuffisances des données: La comparabilité des estimations de population est limitée par les facteurs déjà mentionnés, à savoir, les variations dans le sens des termes de population légale et de population présente, l'imprécision des résultats du recensement sur lesquels reposent les estimations et la variété qui existe dans leur méthode d'établissement.

Ainsi qu'on l'a déjà indiqué à la page 55, le code utilisé pour décrire la façon dont elles ont été établies et permettant de ce fait d'évaluer la qualité des estimations pour 1954, ne s'applique pas automatiquement aux estimations pour d'autres années. Néanmoins il faut convenir que les pays ont tendance à employer les mêmes procédés au cours des années et on peut justement supposer que les estimations se rapportant à des années antérieures ne sont pas plus exactes que celles établies pour 1954.

Les estimations établies entre les recensements sont en général alignées sur les résultats des nouveaux recensements dès qu'ils deviennent disponibles. Lorsqu'on a omis de procéder de la sorte on constate un défaut de comparabilité entre les séries. Cependant, dans un certain

nombre de cas pour lesquels les résultats des recensements effectués depuis 1950 viennent à peine d'être connus ou ne sont que provisoires, les estimations établies entre deux recensements n'ont pas encore été révisées ni alignées sur les chiffres des derniers dénombrements. La nécessité d'une révision est évidente dans quelques-unes des séries; dans d'autres, seules des fluctuations secondaires sont impliquées par les données non révisées. Les séries affectées d'une irrégularité de ce genre sont marquées d'un paragraphe (§).

Tableau 4

Dans le tableau 4 figurent, pour 198 pays et territoires qui ont effectué un recensement au moins depuis 1850, la date de ces dénombrements, le chiffre total de la population *présente "rectifiée"* dénombrée à l'*intérieur des frontières actuelles du pays,* la superficie correspondante du territoire en kilomètres carrés et le taux annuel moyen de variation pour cent de la population entre recensements consécutifs. Comme dans le tableau 1, lorsque les chiffres ne s'appliquent pas au territoire actuel du pays considéré on l'a indiqué en note, où l'on trouvera également des estimations relatives aux groupes non recensés et celles établies pour évaluer les lacunes du dénombrement dans la mesure ou elles sont connues.

Les données du tableau 4 se rapportent à la population présente "rectifiée". Les chiffres relatifs aux superficies, qui sont les derniers communiqués, diffèrent quelquefois de ceux publiés précédemment dans cet ouvrage, ce qui s'explique par des révisions, de nouveaux calculs de la superficie ou l'adoption d'une formule différente pour convertir les milles carrés en kilomètres carrés.

Pour les pays au sujet desquels il n'a pas été possible de reconstituer exactement, en remontant dans le passé jusqu'en 1850, le territoire actuel, et pour ceux dont les frontières ont souvent changé, on a indiqué le territoire de l'époque. Dans ce cas, les notes au bas de ce tableau retracent assez complètement les modifications territoriales survenues pendant la période sur laquelle portent les statistiques et indiquent également le nombre de personnes affectées par ces fluctuations. Les renseignements sont plus complets pour les recensements effectués depuis 1900 que pour ceux exécutés avant cette date.

Plusieurs séries sont également publiées lorsque les chiffres relatifs à deux catégories de population (présente "rectifiée" et légale ou de droit) sont disponibles pour la période considérée. L'inclusion de ces séries supplémentaires a paru justifiée par l'intérêt que peut présenter la comparaison de ces deux sortes de statistiques sur une certaine période.

Les séries ininterrompues de données sur la superficie et la population sont reconnaissables à l'absence d'un trait horizontal qui indique un défaut de continuité. D'après ce principe un trait et un espace se prolongeant jusqu'à la colonne de gauche du tableau annonce une série chronologique additionnelle. Un trait à travers la colonne des superficies indique une modification du territoire sur lequel ont porté les recensements dans une même série chronologique. Un trait horizontal limité à la colonne des populations signale une autre catégorie de population que celle qui se trouve habituellement dans le tableau, c'est-à-dire, population légale au lieu de population présente. Les modifications territoriales signalées de la sorte sont toutes expliquées en note, à l'exception de celles relatives au Venezuela et au Japon.

Lorsqu'il s'agit de recensements ayant porté sur l'ensemble du pays et que le chiffre de superficie et de la population fournis par des recensements consécutifs ont été considérés comme suffisamment comparables, on a calculé le pourcentage moyen de variation de l'effectif de la population entre recensements consécutifs. Des explications sur les taux d'accroissement ou de diminution exceptionnellement élevés ont été fournies en note chaque fois que cela a été possible. Toutefois certains taux extrêmes restent inexpliqués. Il est probable que quelques uns d'entre eux sont imputables en grande partie au fait que la portée du dénombrement n'a pas toujours été la même, tandis que pour d'autres l'inclusion ou l'exclusion des forces armées et de groupes spéciaux de la population peuvent être à l'origine des ces anomalies.

Portée: 198 pays et territoires sont représentés dans le tableau 4, c'est-à-dire tous ceux qui ont effectué un recensement "véritable" au moins entre 1850 et 1954. La définition de "véritable" recensement est celle déjà donnée à propos du tableau 1. Les recensements mentionnés dans le tableau n'ont pas tous porté sur l'ensemble du pays. On a néanmoins indiqué des totaux partiels ou régionaux obtenus dans le cadre de "véritables" recensements afin de donner un aperçu plus complet de l'histoire des recensements au cours du siècle considéré.

Calcul des pourcentages: Les taux qui représentent les pourcentages annuels de variation expriment la progression géométrique moyenne d'accroissement ou de diminution, entre les résultats de deux recensements successifs, calculée au moyen de la formule suivante:

$P_1 = P_0 (1 + r)^t$, dans laquelle,

P_0 représente la population au début de la période en cause

P_1 représente la population à la fin de cette période

t le nombre d'années écoulées entre le début et la fin de cette période

r le taux annuel de variation.

Comme on l'a déjà indiqué, on n'a calculé de taux de variation qu'entre des recensements ayant porté sur l'ensemble du territoire et seulement pour ceux qui ont été considérés comme comparables entre eux. Sauf indication contraire, on a considéré que cette condition était remplie lorsqu'une certaine continuité se manifestait tout au long des séries pour ce qui est de la nature du dénombrement (population légale et population présente), de la portée du recensement, ou du territoire considéré (aucune modification territoriale ou modification telle qu'il était relativement facile de rapporter la population au territoire actuel). Comme on a publié d'ordinaire des séries différentes pour la population légale et la population présente ainsi que là où des modifications territoriales importantes se sont produites, aucun taux n'a été calculé entre deux séries distinctes. De même, on n'a pas calculé de taux entre deux résultats de recensements dont l'un paraissait nettement inférieur ou supérieur à la réalité. On n'a pas non plus calculé de taux pour les séries se rapportant à des recensements qui n'ont pas porté sur l'ensemble du territoire ou de la population parce qu'on a pensé que les

variations survenant dans ces fractions de la population ne sont pas représentatives et ont une origine souvent hétérogène.

Insuffisances des données: Les résultats des dénombrements de population qui sont présentés dans ce tableau sont, bien entendu, sujets aux imperfections habituelles, c'est-à-dire erreurs par excès ou par défaut dans la portée du recensement et variations dans la notion de population légale et de population présente au cours des années considérées. Lorsqu'on savait que les chiffres publiés étaient notablement supérieurs ou inférieurs à la réalité, ce détail a été indiqué en note. Les seuls renseignements dont on dispose sur la définition de la population totale se trouvent dans le tableau A à la page 54. Il convient par suite de se reporter à ce tableau si l'on tient à connaître la composition de la population des différents pays au dernier recensement. Pour les recensements antérieurs aucune information précise n'est disponible, mais on peut supposer qu'ils ont été effectués selon les mêmes principes.

Tableau 5

La répartition de la population entre les principales divisions administratives des différents pays ou territoires et, dans quelques cas, le nombre d'habitants de la capitale, sont indiqués dans le tableau 5. Ces chiffres ont été fournis par les recensements de la population effectués entre 1945 et 1954 dans les différents pays.

Sauf indication contraire, les divisions administratives mentionnées dans le tableau sont celles qui existent actuellement dans le pays. Les exceptions à ce principe ont été signalées dans le tableau et comprennent l'Inde et le Pakistan où une modification de la structure administrative est en cours, et plusieurs pays d'Europe où l'on sait que de nouvelles divisions administratives ont été créées mais pour lesquelles on ne dispose pas encore de données.

Le tableau 5 présente le nom de chaque état, province, département, district ou commune sous la forme communiquée par chaque pays, dans la langue originale ou au moyen d'une transcription. Cette méthode a été adoptée par suite de la difficulté de déterminer un équivalent acceptable de ces termes en anglais ou en français. Pour la même raison les noms des unités administratives communiqués par un pays de langue anglaise ou de langue française ne sont publiés qu'en anglais ou en français seulement.

La désignation des divisions administratives est d'autre part donnée également en anglais et en français et, lorsque leur traduction peut sembler discutable, le terme, dans la langue d'origine, est également indiqué en italiques. Dans quelques cas où il n'existait pas d'équivalent connu la désignation de l'unité administrative est uniquement publiée dans la langue d'origine comme par exemple pour le Portugal et ses colonies: *concelhos.*

Les divisions administratives, quelle que soit leur importance, sont présentées dans l'ordre alphabétique pour plus de commodité.

Portée: La répartition de la population par divisions administratives principales est indiquée pour 139 pays et territoires. Les chiffres publiés proviennent seulement de recensements ayant porté sur l'ensemble du territoire considéré ou ayant touché la majeure partie de la population, c'est-à-dire, population africaine en Rhodésie, population juive en Israël, etc. On s'est borné à publier dans ce tableau des données de cette nature, parce que la répartition géographique de petits segments de la population totale, telle que la population européenne sur un territoire africain, semble présenter un intérêt limité, réduit la plupart du temps à la simple publication des noms des circonscriptions administratives du pays considéré.

Insuffisances des données: L'importance administrative ainsi que l'étendue moyenne des principales divisions varient considérablement suivant les pays et territoires. Ainsi, du point de vue administratif, le terme de "province" au Canada ne correspond pas exactement au même genre de circonscriptions en Guyane britannique ou à Costa Rica, par exemple. Les "comtés" qui, en Norvège, sont les principales divisions administratives correspondent plus ou moins à ceux d'Angleterre et du Pays de Galles mais beaucoup moins aux états des Etats-Unis d'Amérique qui, en théorie, devraient s'identifier à ses principales divisions administratives. Il conviendra de ne pas perdre de vue la variété infinie des divisions administratives désignées par les mêmes termes lorsqu'on utilisera les données du tableau 5.[4]

Les données du tableau 5 sont des plus hétérogènes. Dans plusieurs cas, les circonscriptions communiquées par les pays ne sont pas leurs divisions administratives principales mais des divisions secondaires. C'est ainsi qu'un pays peut indiquer la répartition de sa population par communes alors que ses divisions administratives principales sont des arrondissements. De même, les chiffres sont quelquefois publiés par départements bien que les divisions administratives principales soient des régions. De ce fait, les données relatives aux divisions administratives principales sont quelquefois accompagnées d'autres qui se rapportent à des circonscriptions secondaires ou du dernier degré. On pourra se rendre compte de ce manque d'uniformité dans l'énumération des divisions administratives en consultant l'ouvrage déjà cité.

Un autre problème se pose à propos des pays qui répartissent leur population non d'après certaines divisions administratives mais plutôt conformément à des entités géographiques qui n'ont aucune signification du point de vue administratif. Le territoire de certains de ces pays n'est pas divisé en circonscriptions administratives, et d'autres ne fournissent des données que pour des unités géographiques qui paraissent présenter plus d'intérêt du point de vue démographique, telles que des îles ou des archipels.

Une autre source de divergences est celle qui a déjà été mentionnée au sujet de la constitution actuelle du pays. Dans quelques cas indiqués dans les tableaux, les divisions pour lesquelles les données sont publiées ne représentent pas la répartition administrative actuelle du pays. De ce fait, ces données ne peuvent être utilisées que si elles sont rapportées au territoire de l'époque.

Comme les statistiques de ce tableau, étant donné leur nature, ne sont pas comparables d'un pays à l'autre, les

[4] Un exposé détaillé du système administratif de 53 pays est donné dans *"Administrative divisions by type and number . . ."* dans le *Handbook of Population Census Methods,* Organisation des Nations Unies, Département des Affaires Economiques, Bureau de statistique, document ST/STAT/SER.F/5, New York, juin 1954, p. 108-112.

concepts utilisés pour définir la population totale et les lacunes du recensement n'ont d'importance que dans la mesure ou ils affectent les chiffres relatifs aux différentes divisions administratives du pays. Le fait que les chiffres s'appliquent à la population légale ou à la population présente peut avoir une influence plus grande sur certaines circonscriptions que sur d'autres. De même, les lacunes du recensement peuvent indubitablement être plus conséquentes dans certaines régions que dans d'autres. Pour plus de détails sur l'importance relative de ces divers facteurs il conviendra de consulter le rapport officiel qui est généralement publié sur le recensement.

Tableau 6

Le tableau 6 indique la population des capitales de chaque pays, quelle que soit leur importance, ainsi que celle des villes de 100 000 habitants ou plus aux recensements effectués de 1945 à 1954.

Comme les limites des grandes villes sont fixées de manière différente d'un pays à l'autre, on s'est efforcé de publier dans le tableau non seulement les données relatives à la "ville proprement dite" mais encore celles qui se rapportent à l'"agglomération urbaine" lorsqu'il y en a une. On entend par agglomération urbaine la banlieue ou le territoire à population très dense, extérieur mais contigu aux limites officielles de la ville. Chaque fois qu'on a pu disposer de chiffres sur l'"agglomération urbaine" on s'en est servi pour appliquer le critère de 100 000 habitants afin que chaque "grande ville" tombant dans cette catégorie, quelle qu'en soit la définition, puisse figurer dans le tableau.

A l'exception de la capitale qui est toujours la première, quelle que soit l'importance de sa population, les villes sont présentées dans le tableau 6 dans un ordre décroissant de population de la ville proprement dite.

On a choisi ce procédé parce que la plupart des pays communiquent un chiffre pour la "ville proprement dite" tandis que peu d'entre eux en fournissent sur l'agglomération urbaine. Il se peut néanmoins que du fait même de cette présentation les "agglomérations" ne soient pas toujours disposées dans un ordre décroissant de population.

En ce qui concerne la terminologie, les noms de villes ont été donnés de la même façon que les divisions administratives du tableau 5, c'est-à-dire, qu'ils sont publiés dans la langue originale ou si nécessaire dans sa transcription. Les villes de pays de langue anglaise ou de langue française ne figurent qu'en anglais ou en français seulement. Cette méthode a été adoptée par suite de la difficulté de déterminer un équivalent acceptable en anglais ou en français des noms officiels de ces villes.

Portée: 127 pays et territoires sont reprsentés dans le tableau 6. Parmi ceux-ci, 73 n'ont de statistiques que pour la capitale seulement, ce qui indique qu'au moment du dernier recensement de population effectué entre 1945 et 1954 aucune ville de ces pays n'avait atteint le chiffre de 100 000 habitants. On trouvera dans le tableau des données pour 676 grandes villes mais celles-ci ne peuvent être considérées comme l'ensemble des villes ayant une population de 100 000 habitants au moins, parce que de nombreux pays n'ont jamais effectué de recensements et que pour d'autres les dernières statistiques dont on dispose se rapportent à des années antérieures à 1945 et, en conséquence, n'ont pas été publiées ici.

Insuffisances des données: Comme ces chiffres ont été tirés de résultats de recensements, ils sont sujets aux mêmes insuffisances que celles qui affectent le chiffre total de la population. Ainsi, ces données peuvent être inférieures à la réalité et peuvent également être influencées par des divergences dans la définition de la population totale (légale ou présente). Ces limitations ont probablement beaucoup plus d'importance pour la population des "grandes villes" que pour la population totale. La difficulté qui se présente lorsqu'il s'agit de définir la résidence dans une ville donnée et celle soulevée par l'interprétation de la population présente sur le même territoire à un moment déterminé rendent les chiffres relatifs à la population des grandes villes particulièrement discutables.

La comparabilité des données est également compromise par des variations dans les notions utilisées pour définir une "grande ville" à des fins administratives. Dans la plupart des pays les "grandes villes" sont des agglomérations dont les limites ont été fixées officiellement et dont le caractère "urbain" est habituellement caractérisé par une forme quelconque de gouvernement local. Dans d'autres, au Japon par exemple, la "ville proprement dite" est une division administrative composée d'une agglomération principale et du territoire avoisinant, qui peut avoir un caractère rural très différent et contenir d'autres agglomérations distinctes. Chaque fois qu'on a eu connaissance que les données appartenaient à la dernière catégorie on l'a indiqué dans le tableau.

Les données du tableau 6 ont une valeur limitée lorsqu'il s'agit de procéder à des comparaisons de l'importance relative des villes entre pays, étant donné le défaut de comparabilité entre les concepts utilisés et aussi également parce que les chiffres se rapportent à des dates de recensements variant d'un pays à l'autre. La population des grandes villes augmente ou diminue rapidement à la suite de fluctuations économiques et sociales et pour cela même les chiffres fournis par les recensements de population perdent très vite leur actualité. Cependant, comme il est difficile d'obtenir des estimations de la population des grandes villes, les chiffres fournis par les recensements demeurent encore les meilleurs moyens d'évaluation.

2. Population urbaine et population rurale

Des statistiques permettant de se faire une idée du degré relatif d'urbanisation des pays et territoires sont présentées dans deux tableaux de cet *Annuaire*. Dans le tableau 7 on a indiqué la population totale suivant son caractère "urbain" ou "rural" tel qu'il est défini dans chaque pays; dans le tableau 8 la même population est répartie en 11 groupes selon l'importance de la population des localités considérées.

Des statistiques comparables sur le plan international de la population urbaine et de la population rurale sont nécessaires à la résolution de nombreux problèmes. La mesure du développement économique et social d'un pays est souvent étroitement liée à son degré d'urbanisation. De même, pour pouvoir déterminer les tendances de la

fécondité, de la mortalité, etc., dans les régions urbaines et dans les régions rurales et leurs rapports avec les niveaux de vie correspondants, il convient de disposer de répartitions de la population d'après ces caractéristiques.

Comme on le verra cependant, en prenant connaissance des définitions publiées dans le tableau 7 la notion de population "urbaine" varie énormément d'un pays à l'autre. Les différences rencontrées ont également trait à la classification de cette population. Dans quelques pays, la classification est fondée sur les plus petites unités administratives; dans d'autres, elle repose sur l'importance de la population des localités, quelles que soient leurs limites administratives. En outre, parmi les pays qui répartissent leurs unités administratives en urbaines ou rurales il y a encore de très importantes variations dans le critère utilisé.

Comme la classification des subdivisions administratives présente une telle diversité et du fait que les résultats obtenus ne semblent pas permettre établir une comparabilité satisfaisante sur le plan international, la Commission de la Population[5] de l'Organisation des Nations Unies a recommandé, qu'en plus de ces classifications, la population soit répartie également suivant l'importance des localités ou des agglomérations. On en revient ainsi au principe de mesurer la population urbaine en fonction de "l'unité d'urbanisation", c'est-à-dire l'agglomération, tout en admettant implicitement qu'il n'existe aucun point défini ou l'on puisse affirmer que la "campagne" se termine et que la "ville" commence. Par suite, la ligne de démarcation tracée entre ces deux régions est absolument arbitraire. Une classification plus systématique permet de comparer le degré d'urbanisation d'un pays à l'autre en fonction de la population des agglomérations. On a réuni dans le tableau 8 des données classées de la sorte fournies par les recensements.

Tableau 7

Le tableau 7 présente les statistiques (fournies par les recensements effectués de 1945 à 1954) de la population selon le sexe, de 105 pays et territoires, classée en population "urbaine" et population "rurale" d'après la définition utilisée dans chaque pays. On a publié dans le tableau les définitions de la population "urbaine" employées par chaque pays. La proportion de la population urbaine et de la population rurale a également été calculée séparément par sexe et pour les deux sexes. De ce fait, ce tableau fournit des renseignements considérables sur le degré relatif d'urbanisation dans les différents pays du monde.

Sauf indication contraire, les données se rapportent à la population présente "rectifiée" sur le territoire actuel du pays.

Portée: Un ensemble de 105 pays et territoires figurent dans le tableau et des chiffres sont indiqués pour un ou plusieurs recensements effectués entre 1945 et 1954. La portée géographique de ce tableau est ainsi plus étendue qu'elle ne l'était dans l'*Annuaire démographique* de 1952 où l'on a publié pour la dernière fois des données de cet ordre, mais la portée chronologique de ce tableau est plus réduite que le précédent qui remontait jusqu'à 1900.

[5] Rapport de la Commission de la Population (4ème Session), document E/1313. 26 p.

De par leur nature, les données se rapportent aux recensements qui ont porté sur l'ensemble du territoire national et sur la population présente. On remarquera que la répartition par sexe n'était pas disponible dans 12 pays pour lesquels la classification en population urbaine et population rurale n'est donnée que pour l'ensemble de la population.

Insuffisance des données: Les limitations fondamentales imposées par les variations de la population totale et par les lacunes du recensement se font peut être plus sentir dans la répartition de la population en urbaine et rurale que dans sa répartition suivant toute autre caractéristique. C'est ainsi que la classification en population urbaine ou population rurale sera affectée par des différences dans la définition de la résidence habituelle d'autant plus que la population urbaine est généralement exprimée en fonction de divisions administratives secondaires telles que les communes ou les villes. Pareillement, la mesure dans laquelle le dénombrement est complet aura une influence notable sur la comparabilité de ces deux catégories dans l'ensemble du tableau. Il faut admettre cependant que des difficultés supplémentaires sont rencontrées étant donné la diversité entre les pays dans la définition de la population urbaine.

Cette distinction entre les régions urbaines et les régions rurales varie tellement que les définitions utilisées ont été publiées dans le tableau même. Elles figurent dans la colonne de droite, en face des statistiques auxquelles elles s'appliquent. La définition concerne seulement l'élément urbain de la population; il va sans dire que le reste de la population constitue la population rurale, sauf indication contraire dans le tableau. Les définitions sont forcément brèves et lorsque la classification repose sur des divisions administratives elles sont souvent indiquées dans la terminologie en usage dans le pays considéré. Par suite des variations dans la terminologie les différences entre pays peuvent paraître plus grandes qu'elles ne le sont réellement. Mais il se peut aussi que des termes similaires ou identiques, tels que "ville", "village", "district" aient des significations absolument différentes suivant les pays.[6]

Les définitions adoptées par les différents pays peuvent être ramenées à trois types principaux: 1) classification de la population urbaine reposant sur les plus petites circonscriptions administratives déterminées d'après un certain critère; (a) forme quelconque d'administration locale; (b) nombre d'habitants; (c) proportion de la population tirant ses moyens d'existence de l'agriculture; 2) classification reposant sur les chefs-lieux des plus petites circonscriptions administratives, considérés comme urbains d'après le chiffre de leur population, le reste constituant la population rurale; 3) classification reposant directement sur l'importance des localités (agglomérations) qui sont considérées comme urbaines à partir d'un certain chiffre de population, indépendamment de leurs limites administratives.

[6] Un exposé plus complet des problèmes et pratiques ayant trait à la classification de la population en urbaine et rurale se trouve dans le document suivant: *Etude sur les données relatives à la population urbaine et la population rurale dans les recensements récents*, Organisation des Nations Unies. Département des questions sociales, Division de la Population, et Département des questions économiques, Bureau de statistique. Document ST/SOA/SER.A/8, Lake Success, juillet 1950, 27 pages.

Il arrive ainsi que soient considérées comme urbaines des localités de 250 habitants à peine au Danemark alors qu'en Corée les agglomérations ne sont reconnues comme telles que lorsque leur population atteind 40 000 personnes au moins. En Irlande du Nord et en Bulgarie, les localités "urbaines" sont celles qui jouissent officiellement du statut urbain, quelle que soit l'importance de leur population; en Israël, les centres urbains sont ceux de caractère non agricole; à Malte le terme "urbain" s'applique aux régions dépourvues de terres cultivées. Cet aperçu de quelques variations donne une idée du défaut de comparabilité existant entre les définitions de chaque pays.

La distinction entre régions urbaines et rurales est si étroitement liée à des considérations d'ordre historique, politique, culturel et administratif que l'on ne peut progresser que très lentement vers des définitions et des méthodes uniformes. Non seulement les définitions publiées dans le tableau 7 sont différentes les unes des autres, mais encore on n'y retrouve même plus l'intention originale de distinguer les régions rurales des régions urbaines. Lorsque la classification est fondée, en particulier, sur le critère des circonscriptions administratives (comme la plupart le sont) elle a tendance à devenir rigide avec le temps et à décourager toute modification. Pour cette raison la comparaison des données dans le temps peut être dépourvue de signification puisque les définitions ne s'appliquent plus dans la plupart des cas aux circonstances actuelles.

En dépit de ces insuffisances, les statistiques de la population répartie en urbaine et rurale sont extrêmement utiles lorsqu'on se propose de comparer le degré d'urbanisation entre pays ou territoires. Quelle que soit la manière dont elles sont définies les régions urbaines ont de grandes chances de comprendre une forte concentration de population urbaine tandis que les régions rurales sont en majeure partie composées de villages ou de zones aux caractéristiques rurales évidentes. On peut donc dire que si les contrastes entre la population rurale et la population urbaine ne sont pas mesurés de façon précise, ils se reflètent néanmoins dans les statistiques.

Tableau 8

Le tableau 8 présente pour chaque recensement effectué de 1945 à 1954 les "localités" ou agglomérations classées par groupes suivant le nombre de leurs habitants. Le nombre de localités de chaque groupe ainsi que le chiffre de la population selon le sexe dans chacun d'entre eux sont également indiqués dans le tableau.

Les localités qui figurent dans le tableau peuvent être des subdivisions administratives aux limites définies telles que des communes, des villes, etc., des agglomérations sans limites officielles définies ou les deux à la fois. Le type de localité est indiqué pour chaque pays dans la mesure où il est connu.

Indépendamment de leur nature, les localités ont été réparties d'après leur importance de la façon suivante: moins de 200 habitants, 200 à 499 habitants, 500 à 999 habitants, 1 000 à 1 999 habitants, 2 000 à 4 999 habitants, 5 000 à 9 999 habitants, 10 000 à 19 999 habitants, 20 000 à 49 999 habitants, 50 000 à 99 999 habitants, et 100 000 habitants et plus. Une catégorie existe aussi pour les localités inclassables ailleurs.

Sauf indication contraire, ces données se rapportent à la population présente rectifiée se trouvant à l'intérieur des frontières actuelles des pays considérés.

Portée: On a publié dans le tableau 8 des statistiques pour 93 pays et territoires. Les recensements choisis sont ceux qui ont porté sur l'ensemble de la population ou presque, par exemple la population juive en Israël. Un ensemble de 107 répartitions se trouve dans le tableau parmi lesquelles 64 sont également classées selon le sexe.

Insuffisances des données: Comme les données du tableau 8 proviennent d'un recensement elles sont affectées des mêmes limitations inhérentes aux différences dans la définition de la population totale et aux variations de la mesure dans laquelle le dénombrement est complet. On a examiné les conséquences de ces facteurs à la page 52.

En outre, les statistiques de la population classées suivant l'importance des localités voient leur valeur réduite par la variété que l'on trouve dans les définitions du terme "localité" suivant les pays. Les unités à propos desquelles on a publié des statistiques dans le tableau 8 sont de trois sortes:

a. Agglomérations ou groupements de population pour lesquels on ne tient pas compte des limites officielles ou des formes d'administration. Les pays employant ce type de classification ne différencient pas toujours toutes les agglomérations suivant leur importance mais seulement celles ayant une population supérieure à un certain minimum, par exemple, localités de 200 habitants au moins ou localités de 1 000 habitants ou plus.

b. Localités aux limites définies jouissant du statut de "ville" généralement caractérisé par une forme d'administration locale reconnue en vertu d'une charte ou par l'institution d'une municipalité. De telles localités sont désignées par des termes très différents. Parmi les plus fréquents on trouve ceux de "cités", "villes", "districts urbains". Ce sont quelquefois des districts comprenant une agglomération centrale et des faubourgs qui sont administrés du chef-lieu. D'autres fois, ce sont des villes distinctes de caractère essentiellement urbain, avec des limites urbaines qui peuvent correspondre à celles de l'agglomération. L'ensemble des ces unités englobe souvent la population "urbaine" telle quelle est définie par le pays considéré.

c. Subdivisions administratives, (souvent du dernier degré) aux limites définies et dont l'ensemble couvre le territoire entier du pays considéré. De telles localités ne sont pas nécessairement dotées d'une forme quelconque d'administration locale ou ne possèdent pas forcément le statut de ville; cependant certaines d'entre elles, généralement celles ayant une forte population, peuvent présenter ces deux caractérisques. C'est dans ce cas qu'il est le plus difficile d'évaluer dans quelle mesure les unités correspondent à des agglomérations ou à des groupements de population. Dans la plupart des pays, il existe généralement un fort degré de corrélation lorsque des agglomérations relativement grandes sont en cause, alors que les groupements de population sont susceptibles d'être fondus dans des unités territoriales aux limites déterminées. Dans plusieurs pays utilisant ce genre de classification, toutes les unités de cette sorte qui ont une population supérieure à un chiffre donné sont considérées comme comprenant une population urbaine.

On remarquera que ces trois catégories ne sont pas absolument sans rapport, c'est-à-dire, que certaines localités peuvent être quelquefois classées aussi bien dans une catégorie que dans l'autre. On peut supposer qu'il existe un certain degré de comparabilité entre les données relatives à des localités appartenant à la même catégorie (a, b ou c) mais il convient d'être beaucoup plus prudent lorsqu'on procède à des comparaisons de données appartenant à des catégories différentes. Il peut être quelquefois utile de se reporter aux tableaux 5, 6 et 7 lorsqu'on désire obtenir des précisions complémentaires dans certains cas particuliers.

Tableau 9

Pour la première fois des données sont publiées dans l'*Annuaire démographique* sur le nombre et la dimension des ménages. Le tableau 9 indique le nombre total de ménages, le nombre et la dimension des ménages privés (ou familiaux) et le nombre de ménages collectifs (ou non familiaux). Les données présentées ont été fournies par les recensements de population effectués de 1945 à 1954. Sauf indication contraire, elles se rapportent à la population présente "rectifiée" à l'intérieur du territoire actuel des pays considérés.

Les ménages privés ont été classés dans ce tableau selon le nombre de membres de 1 à 16 et plus. Les ménages collectifs n'ont pas été subdivisés d'après ce principe. La classification des ménages privés est beaucoup plus détaillée que celle recommandée par la Commission de la Population[7] dans laquelle le dernier groupe était limité à 10 membres et plus.

Portée: Un ensemble de 72 séries pour 67 pays et territoires différents figure dans le tableau 9. Ces statistiques reposent en général sur la définition du ménage adoptée à des fins de recensement qui peut varier légèrement d'un pays à l'autre, mais qui correspond d'ordinaire soit à la notion de logement soit à celle de vie commune. Afin de conserver une certaine uniformité à cet égard, plusieurs répartitions de ménages fondées sur la notion de famille biologique ont été écartées de ce tableau.

Insuffisances des données: Les ménages sont généralement classés en deux groupes principaux, ménages privés (ou familiaux) et ménages collectifs (ou non familiaux).

Les ménages privés (ou familiaux) constituent la majorité des ménages et sont généralement subdivisés en ménages de plusieurs personnes et ménages d'une seule personne. Par "ménage collectif" on désigne généralement un groupe de personnes vivant ensemble sans pour cela constituer des ménages privés tels que les établissements pénitenciers, les maisons de santé, les hospices, les hôpitaux, les couvents, les casernes, les hôtels, les pensions de famille, les lycées et grandes écoles où vivent les étudiants, etc.

Deux concepts principaux sont à la base de la plupart des définitions des ménages privés. Dans le premier cas le ménage est défini comme *le nombre total d'habitants d'un logement*. D'après la deuxième définition un ménage est constitué par *une ou par plusieurs personnes résidant généralement dans la même habitation et y ayant une vie commune*.

Le premier concept est subordonné à l'adoption préalable d'une définition du logement et fournit ainsi une unité de dénombrement commode pour le rassemblement et le contrôle des données. Mais l'adoption de ce critère ne permet d'obtenir aucun renseignement sur les groupes de personnes ayant une vie commune qui partagent le même logement.

La seconde notion n'est pas liée à la définition du logement et se prête à l'obtention de renseignements permettant une analyse directe des groupes distincts de personnes vivant sous le même toit. L'adoption de ce critère entraine la rédaction d'instructions de recensement très précises en vue de l'identification de tels groupes lors du dénombrement.

La différence fondamentale entre les deux critères réside dans le fait que le premier *n'admet pas qu'il y ait plus d'un ménage par logement,* tandis que le second reconnaît qu'il peut y avoir *plusieurs ménages par logement*. Etant donné les rapports étroits qui existent entre la notion de ménage et celle de logement, il importe de les analyser conjointement pour interpréter correctement le sens des données sur les ménages.

Le nombre et la dimension des ménages dépendent beaucoup du critère utilisé. Ainsi, si le ménage est défini comme le nombre d'habitants d'un logement, le nombre de ménages sera plus petit et leur dimension plus grande que si le ménage avait été défini comme un groupe de personnes résidant dans la même habitation et y ayant une vie commune. Le locataire ou sous-locataire (c'est-à-dire, la personne qui vit sous le même toit que les autres occupants d'un logement mais qui ne prend pas ses repas avec eux, ni ne participe à leur budget) qui constitue un ménage d'une seule personne d'après le second critère ne formerait pas un ménage distinct selon le premier et serait intégré au ménage principal dont la dimension se trouverait ainsi augmentée.

La proportion des ménages privés et collectifs peut également être influencée par la décision adoptée au sujet de certains cas limites. C'est ainsi que les directeurs de certaines institutions, les gérants d'hôtels, etc., qui occupent un logement distinct ne sont pas comptés dans le ménage collectif, mais considérés comme constituant un ménage privé dans certains recensements. Dans d'autres, les personnes se trouvant à l'hôtel au moment du recensement, mais qui ont une autre résidence et remplissent certaines conditions, peuvent être dénombrées comme ménages privés. Il arrive également qu'une pension de famille soit classée comme ménage privé si le nombre des pensionnaires ne dépasse pas celui de la famille, y compris les domestiques, ou s'il est inférieur à un certain nombre, 5 à 10 personnes en général, suivant la définition adoptée.

Par suite de ces variations dans les définitions du ménage et du logement, les données sur les ménages peuvent ne pas être directement comparables. Il est indiqué de consulter les publications officielles sur le recensement si l'on tient à connaître de quelle manière ont été traités les cas particuliers. Des renseignements sur la méthode de dénombrement indiquant, par exemple, si le ménage comprend les personnes temporairement absentes au moment

[7] Rapport de la Commission de la Population (Quatrième session), document E/1313, p. 27-28.

du recensement mais dont la résidence habituelle est constituée par le logement, sont particulièrement utiles lorsqu'on cherche à déterminer la signification exacte des données sur les ménages.

3. Age et sexe

On trouvera dans neuf tableaux de cet *Annuaire* des statistiques de la population (ainsi que des naissances et décès) selon l'âge et le sexe. Le tableau 10 présente en deux parties, A et B, des données sur la population dénombrée et estimée classées par groupes d'âge quinquennaux; le tableau 11 donne la composition de la population dénombrée par année d'âge; le tableau 12 fournit la répartition de la population selon l'état matrimonial et l'âge; dans le tableau 13 figurent des données sur l'aptitude à lire et à écrire suivant l'âge et le sexe des populations considérées; on a publié dans le tableau 15 la répartion de la population active selon l'âge, et dans les tableaux 17 et 18 celles de la population féminine de 15 ans et plus selon l'âge et le nombre d'enfants nés vivants et le nombre d'enfants vivants au moment du recensement. Enfin, les tableaux 21 et 26 présentent les naissances d'après l'âge de la mère et les décès par âge.

L'âge, qui est la caractéristique la plus universellement demandée aussi bien dans les recensements de population que lors de l'enregistrement des faits d'état civil, est généralement déterminé au moyen de deux sortes de questions, posées séparément ou de concert. Dans le premier cas on se borne à solliciter la date de naissance, dans le second la personne doit fournir son âge en unités de temps révolues, c'est-à-dire, au dernier anniversaire. Pour les enfants de moins d'un an la réponse doit être donnée en fonction des unités de temps révolues les plus grandes, c'est-à-dire, en mois, en semaines ou en jours suivant le cas. Il est évident que la question relative à la date de naissance permet d'obtenir des données beaucoup plus précises que la question directe mais son application est limitée dans les pays où une grande partie de la population est illettrée et, de ce fait, incapable de fournir sa date de naissance exacte. D'autre part, la question directe aboutit souvent à des réponses inexactes soit par ignorance, soit délibérément.

Une autre source de variation réside dans la manière dont sont classées les données. La méthode conventionnelle consiste à convertir la date de naissance à l'âge au dernier anniversaire en déduisant la date exacte de naissance de la date du recensement. Ces "âges" exprimés en unités de temps révolues les plus grandes, c'est-à-dire, années, mois, semaines, jours, sont ensuite répartis dans des groupes d'âge déterminés, ou par année d'âge suivant le cas. Cette méthode des "années révolues" n'est cependant pas toujours employée. Quelques pays classent leur population non par âge, mais par année de naissance. D'après un tel procédé, tous les enfants nés dans l'année qui précède celle du recensement ont officiellement un an, même s'ils sont nés le 30 novembre et que le recensement ait été effectué le 1er janvier de l'année suivante, alors qu'ils n'ont en réalité qu'un mois de vie. On se rend compte que cette sorte de classification a été utilisée lorsque les chiffres dans la catégorie de moins d'un an sont plus petits qu'ils devraient l'être par rapport aux catégories suivantes. Il faut avouer cependant, que lorsqu'on tombe sur une année pendant laquelle un grand nombre de naissances a eu lieu cela n'est pas aussi évident. Un bon exemple de ce phénomène se trouve dans la répartition par année d'âge pour la Norvège en 1946 qui a été effectuée d'après l'année de naissance. Dans ce cas, la catégorie de moins d'un an indique 69 133 personnes tandis que le groupe d'un an ne comprend que 62 464 personnes. Cela est dû probablement au fait que le taux de natalité a atteint son maximum d'après-guerre en 1946 en Norvège. Chaque fois qu'on a su que la classification publiée avait été établie d'après l'année de naissance on l'a indiqué dans les tableaux.

Quelle que soit la méthode utilisée il est difficile d'obtenir des renseignements précis sur l'âge. Les erreurs à cet égard proviennent de nombreux facteurs parmi lesquels on peut citer, comme on l'a déjà fait ci-dessus, une ignorance de l'âge exact, la négligence, une tendance à déclarer des âges se terminant par certains chiffres tels que 0, 5, 2 et 8; une aversion irraisonnée pour certains nombres comme 13 et de fausses déclarations faites délibérément pour des motifs d'ordre économique, social, politique ou simplement personnel. On a également tendance à oublier de déclarer les enfants en bas âge.

A la suite de ces difficultés les données relatives à la composition de la population par âge et par sexe d'un grand nombre de pays présentent certaines irrégularités. Parmi ces anomalies on peut citer: 1) des lacunes dans le dénombrement des nourrissons et des jeunes enfants, 2) un gonflement des déclarations des âges se terminant par le chiffre 0 ou le chiffre 5, 3) une préférence pour les âges pairs au dépend des âges impairs, 4) un écart considérable et inattendu entre le nombre de personnes du sexe masculin et celui du sexe féminin à certains âges, 5) un écart considérable et difficile à expliquer entre les effectifs de groupes d'âge successifs ou voisins. Ces irrégularités compromettent l'utilité des statistiques surtout lorsqu'on désire les employer à certaines fins.

Si l'on procède pour des recensements successifs, à une comparaison des statistiques relatives à des groupes identiques (promotions, etc.) ainsi qu'à une étude de la répartition par âge et par sexe de la population fournie par chaque recensement, on peut relever de ces inconséquences et d'autres anomalies dont certaines se retrouvent même dans les recensements les plus "modernes". L'examen des données relatives à l'âge et au sexe reproduites dans cet *Annuaire* et dans ses éditions antérieures montre que, dans certains cas, les statistiques présentent à cet égard des imperfections notables.

Dans les éditions précédentes de l'*Annuaire démographique* les statistiques selon l'âge ont été présentées sous la forme d'âges quinquennaux. Dans ce cas, quelques-unes de ces irrégularités sont compensées ou disparaissent dans une certaine mesure. L'exactitude des nombres dans les groupes d'âge quinquennaux continue à en être affectée mais le degré de distorsion n'est pas vraiment évident. Afin de mesurer la précision des statistiques publiées à cet

égard un indice[8] a été mis au point. Bien que cet indice soit sensible aux différentes sources d'inexactitude des données il peut également être considérablement affecté par les fluctuations démographiques passées. On ne peut, en conséquence, l'appliquer indistinctement à toutes sortes de statistiques, à moins d'effectuer les ajustements nécessaires et d'user de prudence en interprétant les résultats.

La publication dans cette édition de l'*Annuaire démographique* de statistiques de la population par année d'âge permet d'appliquer un indice simple mais très sensible, dont l'interprétation est dénuée de considérations étrangères à l'exactitude des déclarations d'âge. Des méthodes plus élaborées ont été mises au point pour évaluer l'exactitude des répartitions de population par année d'âge mais on a décidé de se servir de cet indice à cause de sa simplicité et de sa large utilisation. L'établissement de cet indice est attribué à Whipple et est connu comme "indice de Whipple" ou encore "indice de concentration".[9]

"Cet indice est obtenu en additionnant les déclarations d'âge de 23 à 62 ans et en faisant le rapport des déclarations se terminant par 5 et 0 au cinquième de la somme totale. Les résultats varient entre un minimum de 100, représentant aucune concentration, et un maximum de 500 si aucune déclaration d'âge ne se termine par un chiffre autre que ceux qui ont été mentionnés".[10]

Cet indice est applicable à toutes les répartitions par âges pour lesquelles les années d'âge sont données au moins jusqu'à l'âge de 62 ans, avec les exceptions suivantes: 1) lorsque les données présentées ont déjà fait l'objet d'un ajustement (par exemple, les statistiques de l'Inde et du Canada publiées dans cette édition) aucune irrégularité n'est révélée par l'indice de Whipple bien que les données puissent être affectées de plusieurs sortes d'inexactitudes; 2) lorsque les statistiques relatives à l'âge ont été obtenues à partir de l'année de naissance, et qu'on a eu tendance à arrondir l'année de naissance ce qui produit des âges impairs (comme c'est le cas pour les résultats du recensement de la Yougoslavie en 1948), l'effectif des déclarations d'âge se terminant par les chiffres 5 et 0 ne convient pas pour évaluer leur exactitude.

A partir des statistiques relatives à l'ensemble de la population, on a calculé cet indice pour toutes les répartitions par année d'âge présentées dans ce volume à l'exception de celles déja signalées. Les résultats ont été groupés dans les 5 catégories suivantes:

	Indice de Whipple
I. Données très précises	moins de 105
II. Données relativement précises	105 à 109,9
III. Données approximatives	110 à 124,9
IV. Données grossières	125 à 174,9
V. Données très grossières	175 et plus

Ces catégories sont forcément arbitraires et il peut se faire qu'elles séparent deux séries de statistiques très peu différentes au point de vue de la qualité. C'est ainsi qu'on en est arrivé à l'indice de 104,4 pour la population européenne de la Nouvelle-Zélande en 1945, tandis que la population totale de ce même pays se voyait appliquer l'indice de 105,2, différence minime mais qui fait tomber le deuxième groupe dans la catégorie II au lieu de I. Les résultats de cette tentative d'évaluation de l'exactitude des déclarations d'âge de ces 97 répartitions fournies par les recensements, sont les suivants:

Catégorie I: Algérie 1948 (Européens), Allemagne 1946, Allemagne Orientale 1946, Angleterre et Galles 1951, Argentine 1947, Australie 1947, Autriche 1951, Belgique 1947, Berlin 1946, Berlin-Ouest 1950, Danemark 1945 et 1950, Ecosse 1951, Finlande 1950, France 1946, Groenland 1945, Iles Féroé 1950, Iles Ryû-Kyû 1950, Irlande 1946 et 1951, Irlande du Nord 1951, Islande 1950, Japon 1947 et 1950, Liechtenstein 1950, Luxembourg 1947, Madagascar 1951 (Européens), Maroc Français 1951 (Européens), Nouvelle-Zélande 1945 (Européens), Nouvelle-Zélande 1951 (Européens et population totale), Norvège 1946 et 1950, Papua 1954 (Européens), Pays-Bas 1947, Rhodésie du Nord (1950), Rhodésie du Sud 1946 et 1951 (Européens), Sarre 1946 et 1951, Sud-Ouest Africain 1946 (Européens), Suède 1945 et 1950, Suisse 1950, Union Sud-Africaine 1946 (Européens), Union Sud-Africaine 1946 (Blancs), Yougoslavie 1953;

Catégorie II: Alaska 1950, Allemagne Occidentale 1950, Barbade 1946, Etats-Unis 1950, Groenland 1951, Hawaï 1950, Iles Bermudes 1950, Ile de Man 1951, Israël 1948, Malte et Gozo 1948, Nauru 1954, Nouvelle-Guinée 1954 (population non indigène), Nouvelle-Zélande 1945 (population totale), Nouvelle-Zélande 1951 (Maoris);

Catégorie III: Guyane Britannique 1946, Honduras Britannique 1946, Iles sous le Vent 1946, Ile Norfolk 1954, Nouvelle-Zélande 1945 (Maoris), Portugal 1950, Rodrigues 1952, Thaïlande 1947;

Catégorie IV: Algérie 1948 (Musulmans), Brésil 1950, Ceylan 1946, Costa-Rica 1950, Grèce 1951, Iles dans le Vent 1946, Iles Fidji 1946, Ile Maurice 1952, Panama 1950, Philippines 1948, Porto-Rico 1950, Sud-Ouest Africain 1946 (population totale), Tanganyika 1952 (population non indigène), Trinité et Tobago 1946, Union Sud-Africaine 1946 (population totale), Venezuela 1950;

Catégorie V: Bolivie 1950, Chypre 1946, Egypte 1947, Equateur 1950, Guatemala 1950, Guinée Portuguaise 1950 (population non indigène), Haïti 1950, Mexique 1950, Nicaragua 1950, République Dominicaine 1950, Salvador 1950, Turquie 1945 et 1950.

L'indice a également été calculé pour chaque sexe. On admet généralement que les déclarations d'âge faites

[8] Pour calculer cet indice on a additionné les différences des valeurs présumées des rapports entre les nombres relatifs à chaque sexe dans le même groupe d'âge et les nombres relatifs au même sexe dans des groupes d'âge adjacents. En établissant l'indice, une certaine marge a été laissée pour tenir compte de facteurs tels que l'influence des fluctuations observées sur les taux de natalité, les pertes de guerre et le faible effectif de la population, dans certains cas. Un exposé détaillé de cette méthode, et les résultats de son application aux compositions par âge fournies par les recensements qui ont paru dans les éditions 1949-50 et 1951 de l'*Annuaire démographique*, se trouvent dans le numéro 2 du *Bulletin démographique* (Organisation des Nations Unies, Département des affaires sociales, document ST/SOA/Ser.N/2, New-York, octobre 1952, p. 59-79). Les résultats de l'application de cette méthode aux statistiques présentées dans l'édition de l'*Annuaire* 1952 sont présentés dans cette édition, et des explications sommaires ont été également données à ce sujet dans cette édition ainsi que dans celle de 1953 et de 1954.

[9] *"Thirteenth Census . . ."* United States Bureau of the Census, Volume I, p. 291-292.

[10] *"Census of India"* 1921, Volume I, Part I, report by J. T. Marten, Calcutta, 1924, p. 126-127.

par les hommes sont plus exactes que celles faites par les femmes quoique ce ne soit pas toujours le cas. Ainsi, des 51 répartitions par âge et par sexe auxquelles un indice de 105 et plus a été attribué, l'indice relatif aux femmes est supérieur à celui des hommes dans 45 cas mais inférieur dans 6 cas. En cette occurrence, les déclarations d'âge faites par les femmes ont marqué moins de préférence pour certains chiffres que celles des hommes (Barbade, Guinée Portugaise, Haïti, Hawaï, Nouvelle-Guinée, Nouvelle-Zélande 1951 (Maoris)).

Il ne faut pas oublier que cet indice ne reflète que la préférence, manifestée dans les déclarations d'âge, pour les âges se terminant par 5 et 0. Il semble cependant qu'on puisse admettre que ce phénomène est lié à d'autres sources d'inexactitudes dans les déclarations d'âge. Par suite, on peut dire que l'indice donne une idée relativement bonne de l'exactitude des déclarations d'âge.

Tableau 10

La partie A du tableau 10 présente les répartitions de la population par sexe et groupes d'âge quinquennaux fournies par les recensements effectués entre 1945 et 1954. Afin de conserver une certaine continuité dans les séries, et d'éviter de publier des estimations avec les résultats de recensements, les dernières estimations établies après les recensements sont indiquées, pour quelques pays, dans la partie B de ce tableau. Un renvoi des chiffres de dénombrement à l'estimation correspondante figure dans le tableau chaque fois que l'on dispose de ces deux sortes de statistiques.

Pour un certain nombre de pays, ces données représentent les chiffres définitifs de répartitions préliminaires ou fondés sur un sondage qui ont été publiés dans les éditions précédentes de l'*Annuaire*. Pour d'autres recensements très récents il se peut que les chiffres publiés soient eux-mêmes préliminaires ainsi qu'on l'a indiqué dans les notes au bas du tableau.

Les données publiées dans ce tableau se rapportent soit à l'ensemble soit à certaines fractions de la population suivant la portée des dénombrements respectif. On présume que ces estimations ont été établies à partir de résultats de recensements, et mises à jour au moyen des statistique des naissances, de décès et des migrations.

La répartition par âge des chiffres de recensement et des estimations est fondée, à moins d'indication contraire, sur l'âge au dernier anniversaire. Elle comporte les 20 catégories suivantes: moins d'un an, 1 à 4 ans, 5 à 9 ans, groupes d'âge quinquennaux jusqu'à 74 ans; 75 ans et plus; et âge inconnu. Cette classification diffère légèrement de celle recommandée par la Commission de la Population de l'Organisation des Nations Unies[11] qui suggéra une classification par année d'âge de 1 à 4 ans. Comme la répartition de la population par année d'âge est donnée dans le tableau 11 pour de nombreux pays, on a jugé inutile de reproduire ici la catégorie de 1 à 4 ans.

Sauf indication contraire, les données se rapportent à la population présente "rectifiée" sur le territoire actuel des pays considérés, ainsi qu'on l'a définie à la page 52.

[11] Rapport de la Commission de la Population (Quatrième session), document E/1313, p. 17.

Portée: Une ou plusieurs séries de données sur la population par âge et par sexe de 152 pays et territoires, figurent dans la partie A et B du tableau 10 qui comprend en tout 230 répartitions parmi lesquelles 190 ont été fournies par des dénombrements et 40 consistent en des estimations établies après les recensements. La portée de ce tableau est la plus étendue de tous ceux de cette nature jusqu'ici publiés dans l'*Annuaire démographique* et elle représente la compilation la plus complète de statistiques récentes de la population selon l'âge et le sexe établie jusqu'ici.

Malgré son étendue, tous les principaux pays et territoires du monde ne sont pas représentés dans le tableau 10. Un certain nombre de répartitions fondées sur des estimations ont dû être écartées du tableau à cause de l'impropriété de leur méthode d'établissement. Ce sont des répartitions obtenues en projetant sur l'estimation du chiffre total de la population, la composition par âge et par sexe de la population au dernier recensement. Bien qu'elles n'aient pas été publiées, on dispose de répartitions de cette nature pour la Bolivie, Ceuta, Ceylan, la Colombie, l'Egypte, l'Espagne, Melilla, le Mexique, le Pérou, les Philippines, la République Dominicaine, et la Thaïlande.

Insuffisances des données: La comparabilité des statistiques de la population classées par âge et par sexe, qu'elles soient fournies par des recensements ou fondées sur des estimations, est compromise par des variations dans la définition de la population totale (voir page 52) et par l'étendue des lacunes du recensement, dont il a également déjà été question. L'influence de ces deux facteurs se fait plus sentir sur certains groupes d'âge que sur d'autres. C'est ainsi que l'on oublie plus facilement de dénombrer les jeunes enfants que les personnes plus âgées. De même, la composition de la population totale dépend de l'inclusion ou de l'exclusion de certains groupes qui peuvent englober des personnes se trouvant dans certains intervalles d'âge, tels que les forces armées. Il convient de garder ces détails à l'esprit en utilisant les données de ce tableau.

En plus des insuffisances propres aux données fournies par les recensements de population en général, la qualité des estimations de population varie énormément. Afin de savoir à quoi s'en tenir à se sujet, il convient de se reporter au code (type d'estimation) décrit à la page 55. On trouvera une évaluation des estimations de 1954 d'après ce code dans le tableau 1 et l'on peut supposer, à moins d'indication contraire, qu'il s'applique à toutes les estimations établies après le dernier recensement.

Outre ces considérations d'ordre général, des problèmes particuliers de comparabilité se posent pour les données par âge du tableau 10. On sait que des répartitions par âge et par sexe de la population souffrent de certaines imperfections dues aux lacunes du dénombrement des jeunes enfants et aux inexactitudes des déclarations d'âge. Un exposé de ces questions et une description de la méthode d'évaluation de l'exactitude des déclarations d'âges et de son application aux statistiques ont été donnés à la page 67. Bien que, comme on l'a déjà mentioné, certaines de ces anomalies ont tendance à se compenser ou à disparaître, lorsqu'on classe les données par groupes d'âge quinquennaux, leur exactitude n'en est pas moins affectée et il est difficile de se faire une idée du degré de distorsion. En conséquence, les résultats de la

méthode indiquée à la page 67 pourront être utilisés pour évaluer l'exactitude des données par âge et par sexe de ce tableau. Comme la seule condition mise à la publication des données du tableau 10 est que les chiffres aient été fournis par un "véritable" recensement, il y aura lieu d'être particulièrement prudent en interprétant les statistiques affectées d'un indice d'exactitude discutable.

Une autre limitation à la comparabilité réside dans la base adoptée pour la classification par âge utilisée par plusieurs pays. Chaque fois que l'on a su que cette classification n'avait pas été établie d'après l'âge au dernier anniversaire on l'a indiqué en note et il conviendra de tenir compte de ce facteur en utilisant les données.

Pareillement, les déviations de la classification-type par âge du tableau sont indiquées par des crochets et des notes au bas de page. Bien qu'il ne soit pas question de prétendre à une comparabilité totale sur le plan international on a néanmoins publié ces données à cause de leur valeur fondamentale pour les territoires en question. Ceci est particulièrement vrai pour les territoires africains. En effet, on possède des renseignements statistiques pour ces régions depuis peu seulement, et les résultats de recensements par sondage et d'autres pas toujours très orthodoxes ont été mentionnés ici à cause de la rareté des informations sur ce continent.

A propos de la classification par âge, il importe de remarquer que le fait de ne trouver aucun chiffre dans la catégorie "âge inconnu" n'est pas toujours un indice de la perfection des déclarations d'âge mais souvent une indication que l'on a attribué des âges là où ils n'étaient pas indiqués avant de procéder à l'exploitation des données. La méthode d'après laquelle ces âges ont été attribués n'est pas toujours connue et rares sont les notes qui figurent à ce sujet dans les tableaux, mais il ne faut tout de même pas oublier que ce procédé peut avoir été employé.

Tableau 11

Ce tableau dans lequel sont publiées des données sur la population par année d'âge et par sexe fournies par les recensements de 1945 à 1954, paraît pour la première fois dans l'*Annuaire démographique*. Etant donné son utilité cette classification des données de recensements est établie par la plupart des pays. Non seulement elle fournit des renseignements sur le nombre d'hommes et de femmes se trouvant dans certains intervalles d'âges spéciaux comme par exemple "âge de scolarité obligatoire", "âge pré-scolaire", "âge d'entrée en activité", "âge légal pour voter", "âge minimum légal au mariage", mais encore elle est essentielle pour évaluer l'exactitude des données par âge en général (voir ci-après).

Le tableau 11 indique l'âge par année d'âge depuis l'âge d'un an jusqu'à l'âge de 100 ans et plus pour l'ensemble de la population et pour chaque sexe. Il existe également une catégorie pour les personnes d'âge inconnu. Sauf indication contraire, l'âge est défini conformément à la recommandation internationale,[12] c'est-à-dire, âge au dernier anniversaire. Les données n'ont pas été rectifiées ou corrigées à l'exception d'un cas ou deux signalés dans les tableaux.

[12] Rapport de la Commission de la Population (Troisième session), document E/805, p. 14.

Sauf indication contraire, les données se rapportent à la population présente à l'intérieur des frontières de 1955 du pays considéré.

Portée: Comme il s'agit d'une classification presque universelle, on dispose de données fournies par les recensements effectués entre 1945 et 1954 pour 106 répartitions et 85 pays et territoires. On a publié, dans certains cas, à la fois des données sur la population totale et sur certains groupes ethniques afin d'étendre la portée du tableau.

Insuffisances des données: Ces statistiques, comme les autres données fournies par les recensements de population, sont affectées par les insuffisances dont il a été question à la page 52, à savoir, signification différente attachée aux termes de population présente ou de fait et de population légale ou de droit, ainsi que variations de la mesure dans laquelle le dénombrement est complet aux différents âges. Il conviendra de tenir compte de ces facteurs en utilisant ces données.

De même, la comparabilité des données de ce tableau est limitée par l'établissement de la classification par âge d'après l'année de naissance plutôt que suivant l'âge calculé en années révolues. Les conséquences de cette méthode ont déjà été exposées dans les lignes qui précèdent.

Dans ce tableau, on ne trouvera pas souvent de chiffres dans la catégorie "âge inconnu". Cela n'indique pas toujours que tout le monde a déclaré son âge au cours du recensement considéré; c'est plutôt souvent le signe que les personnes d'âge inconnu ont été réparties entre les groupes d'âge connu d'après une méthode quelconque. Cette répartition des personnes d'âge inconnu explique parfois les différences qui apparaissent entre les groupes d'âge quinquennaux dérivés de données par année d'âge et les groupes d'âge correspondants de la population selon le sexe, l'aptitude à lire et à écrire, l'état matrimonial, l'activité économique, etc.

La répartition de la population par année d'âge reflète clairement une préférence pour les chiffres ronds ou se terminant par certains nombres. Afin d'avoir une idée de la distorsion introduite par ce facteur, l'indice de Whipple a été calculé pour plusieurs répartitions de population par année d'âge. Les résultats obtenus, présentés suivant cinq degrés d'exactitude, sont donn es à la page 67. Il conviendra de se reporter à cette tentative de classement des données d'après leur exactitude avant de se servir des statistiques du tableau 11, parce qu'on n'a pas utilisé ce critère pour décider de l'inclusion des différents pays dans ce tableau.

Les disparités entre les totaux partiels pour les groupes d'âge de 5 et 10 ans publiés ailleurs et ceux obtenus en additionnant les différents âges de ce tableau, proviennent de plusieurs facteurs. Ainsi qu'on l'a déjà mentionné ils peuvent résulter de la répartition des âges inconnus entre les différentes années d'âge plutôt qu'entre les groupes d'âge. On peut également quelquefois attribuer ces anomalies au fait que les répartitions reposent sur l'exploitation d'un échantillon plutôt que sur l'ensemble des données recueillies au cours du dénombrement, ou encore à celui qu'il s'agit d'une exploitation préliminaire tandis que d'autres sont définitives. Autant que possible, on a expliqué ces disparités en note. Il en subsiste cependant quelques-unes pour lesquelles l'origine des différences n'a pu être déterminée.

Tableau 12

On trouvera dans le tableau 12 la population dénombrée, classée selon l'état matrimonial et l'âge pour chaque sexe. Ce tableau a été publié pour la dernière fois dans l'*Annuaire* 1949-50 et les données provenaient alors des recensements effectués avant 1950; le tableau 12 présente des statistiques fournies par les recensements exécutés entre 1945 et 1954.

Sauf indication contraire, les catégories d'état matrimonial publiées dans le tableau sont définies de la façon suivante: 1) Célibataires, c'est-à-dire, personnes qui n'ont jamais été mariées; 2) mariés, y compris les personnes en état d'union de fait stable, (coutumière ou consensuelle) et celles vivant séparées de leur conjoint; 3) veufs, non remariés; 4) divorcés, non remariés; 5) état matrimonial inconnu. Ce sont là les principales catégories recommandées par la Commission de la Population.[13] Des notes et des crochets ont été introduits dans le tableau dans la mesure du possible afin d'expliquer les déviations de ces définitions. En l'absence d'une note il faut supposer que les catégories d'état matrimonial correspondent à la définition internationale, bien que cela ne soit pas toujours certain.

En établissant ce tableau on s'est efforcé de se limiter aux cinq catégories d'état matrimonial classiques, sauf dans les cas ou des subdivisions de la catégorie "mariés" (c'est-à-dire, "en union consensuelle" et "séparés"), ont été créées ou que les personnes en cause n'ont pas été classées dans la catégorie "mariés". Chaque fois qu'on a disposé de données pour ces deux subdivisions elles ont été publiées dans ce tableau.

L'âge est défini ici, comme partout ailleurs dans l'*Annuaire* comme âge au dernier anniversaire. Les intervalles d'âge qui figurent dans le tableau sont 15 ans et plus, moins de 15 ans, groupes d'âge quinquennaux jusqu'à 64 ans, 65 ans et plus et âge inconnu. A l'exception du groupe de 65 ans et plus cette classification correspond à la recommandation formulée par la Commission de la Population à sa Quatrième session.[14]

La limite inférieure de 15 ans a été choisie afin de fournir un commun dénominateur à tous les pays du tableau. On notera cependant que les pays n'utilisent pas toujours cet âge limite ainsi que l'indique l'insertion d'en-têtes secondaires dans le tableau. Il conviendra également de remarquer que la catégorie d'âge "inconnu" n'est pas comprise dans le total partiel de "15 ans et plus" alors qu'elle l'est dans le total "tous âges". Le signe (. . .), utilisé pour "renseignement non disponible", dans la colonne "tous âges" indique qu'un âge limite inférieur a été choisi pour la classification des données.

Sauf indication contraire, les données se rapportent à la population présente "rectifiée" sur le territoire actuel du pays.

Portée: Le tableau 12 comprend 108 répartitions de population selon l'état matrimonial, l'âge et le sexe pour 89 pays et territoires. Faute de place, les données publiées dans ce tableau ont été limitées à celles fournies par les recensements nationaux et se rapportent soit à la population totale soit à la population indigène et non indigène, soit à la partie indigène de la population seulement. Par suite, la portée de ce tableau peut être considérée comme minimum. Les données sur la population non indigène dont on dispose mais qui n'ont pu être publiées, d'après ce principe, sont celles relatives à l'Afrique-Equatoriale Française (1946), l'Afrique-Occidentale Française (1946 et 1951), au Cameroun Français (1946 et 1951), aux Iles Cook (1945), au Kenya (1948), à Madagascar (1951), à Nauru (1954), à l'Ouganda (1948), à la Nouvelle-Guinée (1954), à Niue (1945 et 1951), à Papua (1954), à la Rhodésie du Nord (1946 et 1951), à la Rhodésie du Sud (1946 et 1951), à la Somalie Française (1946 et 1951), au Sud-Ouest Africain (1946), au Tanganyika (1948) et au Togo Français (1946 et 1952). En outre, étant donné le format du tableau il n'a pas été possible d'y publier des chiffres sur la population classée selon l'état matrimonial seulement. On dispose de telles répartitions pour les 18 pays et territoires suivants: Ceuta (1950), Chili (1952), Espagne (1950), Guinée Espagnole (1950), Honduras (1950), Iles du Cap Vert (1950), Iles Seychelles (1947), Iles Vierges [E-U] (1950), Melilla (1950), Mexique (1950), Mozambique (1950), Nauru (1947), Nouvelle-Guinée (1947), Papua (1947), République Dominicaine (1950), Samoa Américain (1950), Swaziland (1946), Zone du Canal (1950).

Insuffisances des données: Comme toutes les données fournies par les recensements, les statistiques de l'état matrimonial sont affectées par les concepts fondamentaux utilisés en définissant la population totale, c'est-à-dire, population présente ou de fait et population légale ou de droit. Il peut se faire également que les chiffres relatifs à la population totale soient inférieurs ou supérieurs à la réalité. On a exposé en détail ces deux sources de variations dans le paragraphe pertinent à la page 52.

Les limitations provenant de la classification par âge ne doivent pas non plus être négligées. Voir la page 66 pour des renseignements sur ces facteurs ainsi que des détails sur l'évaluation de l'exactitude des déclarations d'âge au cours des dénombrements.

La comparabilité des répartitions de la population selon l'état matrimonial pose aussi des problèmes particuliers. L'uniformité apparente des principales catégories d'état matrimonial utilisées dans les différents recensements cache d'importantes variations dans les définitions employées, par exemple, la catégorie "mariés" devrait comprendre toutes les personnes mariées, en état d'union consensuelle et séparées pour correspondre à la recommandation internationale alors que souvent on n'y trouve que les personnes légalement mariées. Pareillement, la catégorie "célibataires" devrait comprendre seulement les personnes qui n'ont jamais été mariées alors qu'on y place quelquefois celles qui sont en état d'union consensuelle. La comparabilité des données est encore plus compromise par la classification des unions consensuelles ou coutumières dans les pays ou elles sont relativement nombreuses. Si l'agent recenseur ou la personne recensée n'a reçu aucune instruction à cet égard, les individus se trouvant dans ce cas peuvent être déclarés comme mariés, célibataires, veufs ou divorcés suivant leur condition légale au moment du recensement. Même lorsque des instructions convenables ont été données, la classification de ces individus n'est probablement que partiellement exacte parce

[13] Rapport de la Commission de la Population (Quatrième session), document E/1313, p. 17.

[14] Ibid., p. 17.

que les erreurs dans les réponses faites sont encore très importantes. Il semble que les couples vivant en état d'union consensuelle ont tendance à déclarer qu'ils sont mariés plutôt que célibataires. Par suite, et comme au point de vue démographique ils sont, en fait, mariés, la Commission de la Population de l'Organisation des Nations Unies a recommandé que lorsqu'elles ne font pas l'objet d'une classification spéciale ces personnes soient classées dans la catégorie "mariés". Un examen du tableau révèle que 24 pays et territoires ont une rubrique spéciale pour les personnes en état d'union consensuelle et qu'aucun ne les classent dans la catégorie "célibataires". Pour le reste des 65 pays on peut supposer que ces personnes se trouvent dans la catégorie "mariés".

Pareillement, la subdivision "séparés", à moins qu'elle ne comprenne que les personnes légalement séparées, est de composition incertaine puisqu'elle est susceptible de comprendre également les personnes mariées qui vivent séparées les unes des autres sans avoir l'intention de le rester. Mais, comme de toute façon, les lois et coutumes relatives à la séparation légale diffèrent entre les pays et à l'intérieur d'un même pays une véritable comparabilité pour ce groupe est probablement hors de question. Etant donné la difficulté à obtenir des statistiques précises et comparables dans ce domaine, les personnes séparées sont généralement classées dans la catégorie "mariés" quoique, ainsi qu'on le verra dans le tableau, elles soient classées séparément par 21 pays et réunies aux "divorcés" par 10 autres.[15]

La manière dont sont traitées les personnes dont l'état matrimonial n'est pas connu constitue également une source de disparités sur le plan international. Dans quelques pays, on n'inscrit jamais sur le questionnaire de recensement que l'état matrimonial est inconnu, celui-ci étant attribué par recoupements. Ainsi, on peut ne pas trouver de chiffres dans la rubrique "état matrimonial inconnu" bien qu'en fait les cas en question aient été répartis entre les autres catégories.

Tableau 13

Pour la première fois depuis la première édition (1948) de l'*Annuaire démographique* des statistiques sur l'aptitude à lire et à écrire de la population classée par âge et par sexe sont présentées dans le tableau 13. Sauf indication contraire, ces données se rapportent à la population présente "rectifiée" sur le territoire actuel du pays considéré.

Les catégories indiquées sont "sachant lire et écrire", "illettrés" et "inconnu" pour l'ensemble de la population et par sexe. La répartition pour cent des personnes sachant lire et écrire et des illettrés dans chaque groupe d'âge a été calculée pour l'ensemble de la population mais non pour chacun des sexes, faute de place.

La classification de la population selon son aptitude à lire et à écrire, âge et sexe permet d'établir un intervalle d'âge commun pour tous les pays. Les statistiques de la population selon l'aptitude à lire et à écrire sont, en général, limitées dans les publications nationales à la partie de la population ayant dépassé un certain âge et comme celui-ci varie de 7 à 15 ans il convenait de fixer un commun dénominateur.

Les groupes d'âge du tableau 13 sont, "tous âges", 10 ans et plus, moins de 10 ans, 10 à 14 ans, 15 à 19 ans, 20 à 24 ans, groupes d'âge décennaux jusqu'à 75 ans et plus, et "âge inconnu". Cette clasification correspond à la recommendation formulée par la Commission de la Population à sa Quatrième session.[16]

Un examen du tableau révèle les variations qui existent dans l'âge à partir duquel la population est classée selon l'aptitude à lire et à écrire. Lorsque des en-têtes secondaires ont été insérés dans le tableau pour un pays quelconque cela signifie que sa classification ne correspond pas à la classification-type. On trouvera très souvent le signe (. . .), "renseignement non disponible", dans la colonne "tous âges" ce qui indique que la classification de la population d'après cette caractéristique commence à partir d'un certain âge.

Portée: 51 pays et territoires sont représentés dans le tableau 13. Toutes les statistiques de cette nature fournies par les recensements ont été publiées dans ce tableau; celles qui n'étaient classées que selon l'aptitude à lire et à écrire mais pas par âge n'ont pu être reproduites dans le tableau faute de place. Parmi celles-ci on peut citer les répartitions suivantes relatives soit à l'ensemble soit à la partie indigène de la population: Bahrein (1950), Basutoland (1946), Bechuanaland (1946), Cameroun Britannique (1952-53), Espagne (1950), Gibraltar (1951), Guinée Portugaise (1950), Honduras (1950), Iles du Cap Vert (1950), Iles Seychelles (1947), Irak (1947), Macao (1950), Mexique (1950), Nigéria (1952-53), Océanie Française (1951), Roumanie (1948), Swaziland (1946), Terre-Neuve (1945). En outre, des renseignements sur la population non indigène seulement sont disponibles pour le Cameroun Français, Madagascar, Mozambique, la Nouvelle-Calédonie, la Somalie Française, le Togo Français, et la Tunisie.

Calcul des pourcentages: Dans ce tableau, les pourcentages expriment le nombre de personnes ayant déclaré qu'elles savaient lire et écrire dans chaque groupe d'âge pour 100 personnes de la population totale dans le groupe d'âge correspondant. On n'a pas tenu compte des personnes pour lesquelles l'aptitude à lire et à écrire était inconnue. Dans le cas ou la proportion de ces personnes est très faible leur exclusion est négligeable. Si cette proportion est grande cependant, leur classification dans une des deux catégories a pour effet d'en augmenter une au détriment de l'autre. Pareillement, la soustraction de la catégorie "inconnu" du total a pour effet d'augmenter les pourcentages dans chaque catégorie. Comme il est difficile de déterminer la catégorie dans laquelle doivent être placées les personnes qui n'ont pas indiqué leur aptitude à lire et à écrire, on n'a procédé à aucune répartition ou soustraction, et les pourcentages du tableau 13 doivent être considérés comme des valeurs minima.

Les personnes d'âge inconnu ont été classées dans une catégorie spéciale et on a calculé la proportion de celles sachant lire et écrire et des illettrées. Les personnes d'âge inconnu ont été écartées des totaux partiels pour 10 ans et plus. Aucun pourcentage n'a été calculé pour le groupe de moins de 10 ans à cause de son hétérogénéité.

[15] Pour des renseignements plus détaillés sur le sort réservé aux personnes en état d'union consensuelle et celles qui sont "séparées", voir *Handbook of Population Census Methods, op. cit.*, chapitre VII, tableau 6.

[16] Rapport de la Commission de la Population (Quatrième session), document E/1313, p. 20.

Insuffisances des données: Les principaux problèmes de comparabilité qui se posent ici proviennent de variations dans la définition de l'aptitude à lire et à écrire et de différences dans les âges à partir desquels ont été établies les classifications.

Dans ce tableau, les personnes capables de lire mais non d'écrire ont été considérées comme illettrées, et il en est de même pour celles qui peuvent écrire mais pas lire. Ce détail est particulièrement important lorsqu'on considère les personnes sachant signer leur nom comme capables d'écrire. Bien qu'on doive admettre que les pays observent cette définition dans les cas très nombreux où on ne dispose pas de renseignements, on sait pertinemment qu'elle n'est pas suivie dans certains pays. C'est ainsi qu'à Bornéo du Nord, à l'île Maurice et à Macao, par exemple, les personnes considérées comme sachant lire et écrire comprennent les "semi-lettrés", c'est-à-dire, celles qui peuvent lire mais pas écrire. Cette variété dans la définition est beaucoup plus profonde qu'elle ne paraît dans le tableau et il convient d'en tenir compte en interprétant les données.[17]

L'autre principal obstacle à la comparabilité des données est constitué par l'âge à partir duquel on recueille des données sur ce sujet. Ainsi qu'on le verra dans le tableau, certains pays exploitent tous les questionnaires, indépendamment de l'âge; d'autres commencent leur classification des données à partir des personnes de 7 ans et plus, 10 ans et plus, 14 ans et plus, 15 ans et plus, etc.

Chaque fois que cet âge varie, il est évident que la proportion de la catégorie "sachant lire et écrire" par rapport à la population totale n'est pas comparable d'un pays à l'autre puisque le numérateur comprend des parties de la population à des intervalles d'âge différents. Afin d'améliorer la comparabilité on a fixé l'âge minimum à 10 ans dans ce tableau et on ne s'est préoccupé que de la partie de la population sachant lire et écrire ayant dépassé 10 ans et plus. Les pays dont l'âge minimum est inférieur à celui-là sont d'ordinaire en mesure de fournir des données sur le groupe des personnes de 10 ans et plus. Mais, pour ceux dans lesquels cet âge est supérieur à 10 ans il n'est pas possible de faire correspondre les chiffres. Il convient de garder ce détail à l'esprit lorsqu'on utilisera les données relatives à la population totale.

Les décisions prises par l'agent recenseur dans certains cas douteux et l'existence de la rubrique "analphabétisme inconnu" constituent également des sources de variations dans les statistiques. Dans certains pays, le fait que la personne fréquentait l'école a été suffisant pour la classer parmi celles sachant lire et écrire. Dans d'autres lorsqu'aucune déclaration à cet effet n'était portée sur le questionnaire on a considéré la personne comme sachant lire et écrire sans demander plus de détails; dans d'autres encore l'absence d'une réponse à la question a été tenue pour indiquer le contraire. Ces variations, bien que pas très évidentes dans le tableau, ne doivent pas être oubliées en utilisant les données.

[17] Pour un exposé plus complet de ces problèmes, voir *L'éducation dans le monde; organisation et statistiques.* Organisation des Nations Unies pour l'Education, la Science et la Culture, Paris, France, 1006 p. Voir également *L'analphabétisme dans divers pays,* Organisation des Nations Unies pour l'Education, la Science et la Culture, Monographies sur l'éducation de base—XI, 1953, 213 p., non compris les graphiques.

En plus des problèmes particuliers dont il a été question il convient de se souvenir que ces données sont comme toutes autres statistiques fournies par les recensements, sujettes aux limitations classiques provenant de variations dans la composition de la population totale et de lacunes éventuelles dans le dénombrement.

4. Caractéristiques économiques

Pour la première fois depuis l'édition de 1949-50, l'*Annuaire démographique* publie des tableaux sur les caractéristiques économiques de la population. On trouvera dans ces tableaux les statistiques fournies dans ce domaine par les recensements de population effectués de 1945 à 1954 et plus particulièrement, des renseignements sur: 1) le nombre et la répartition pour cent des habitants faisant partie de la population active; 2) la population active selon l'âge et le sexe; 3) la répartition de la population active selon la branche d'activité économique et la situation dans la profession.

Le Bureau de statistique de l'Organisation des Nations Unies a réuni ces données au moyen d'un questionnaire spécial adressé aux différents pays, et il a également établi les tableaux statistiques.

Les données fournies par les recensements sur la population active sont les meilleures statistiques de cette nature pour l'évaluation de l'activité économique. Elles sont particulièrement précieuses pour les pays qui ne possèdent aucun autre type de statistiques, dans ce domaine, telles que, statistiques de la sécurité sociale, recensements industriels, statistiques de l'emploi et du chômage, etc. Pour cette raison, on s'est efforcé de rendre la portée géographique des tableaux 14, 15 et 16 aussi large que possible.

Dans ces tableaux, la population *active,* c'est-à-dire, la partie de la population qui travaille, quelquefois désignée comme "main-d'oeuvre", a été définie conformément aux vues exprimées par la Commission de la Population et la Huitième Conférence Internationale des statisticiens du travail. Elle comprend toutes les personnes des deux sexes exerçant ou capable d'exercer un travail productif dans une branche quelconque d'activité économique pendant une certaine période. Les groupes compris dans cette définition sont les suivants:

(1) Employeurs, employés, personnes travaillant à leur propre compte, et travailleurs familiaux non rémunérés.

(2) Civils aussi bien que membres des forces armées.

(3) Personnes occupées et celles en chômage, y compris les personnes cherchant un emploi pour la première fois.

(4) Personnes travaillant à mi-temps, c'est-à-dire, même partiellement actives.

(5) Domestiques.

La population *inactive* comprend, d'autre part, les personnes n'exerçant pas ou incapables d'exercer une activité économique quelconque au moment du recensement. On trouvera dans ce groupe les maîtresses de maison (ménagères), les étudiants, les personnes ne travaillant plus, disposant ou non d'un revenu, les pensionnaires ou hôtes des différentes institutions (hôpitaux, prisons, etc.), les enfants, les personnes ayant atteint l'âge de la retraite, etc.

Comme toutes autres données tirées de recensements, il existe des variations importantes à la fois dans les

définitions et dans les méthodes de rassemblement des statistiques sur les caractéristiques économiques de la population. Un exposé complet et détaillé de ces différences est donné dans: *Application des normes internationales aux données sur la population active fournies par les recensements.*[18] On a souligné dans cette étude, que "s'il est pratiquement impossible de comparer ces statistiques (sur les caractéristiques économiques) sur le plan international, cela est dû à un certain nombre de facteurs importants qui sont les suivants: 1) le fait que certains pays, pour dénombrer la population active, se fondent sur la notion de "travailleur rémunéré" alors que d'autres utilisent celle de "main-d'œuvre"; 2) la manière différente dont sont traités certains groupes, tels que les travailleurs familiaux non rémunérés, les retraités, les membres des forces armées, les détenus et les pensionnaires ou les hôtes d'institutions, etc.; 3) l'utilisation de différentes limites d'âge lors du dénombrement de la population active; 4) les différences dans le libellé des questions posées au cours des recensements et qui influent sensiblement sur les résultats obtenus."

La notion de "travailleur rémunéré" est subordonné à une idée d'activité économique "habituelle" plus ou moins indépendante du facteur temps; la notion de "main-d'oeuvre" au contraire, demande que des renseignements soient fournis sur la nature de l'activité économique exercée pendant une semaine. Ces deux notions ont des avantages et des inconvénients mais il est évident que les deux sortes de statistiques obtenues ne sont pas nécessairement comparables.

Le sort réservé au groupe des "travailleurs familiaux non rémunérés" constitue la variable la plus importante puisque c'est un des facteurs utilisés, pour définir la population active. Dans quelques pays, les femmes et les enfants vivant dans des fermes, par exemple, sont classés comme "travailleurs familiaux non rémunérés" dans la population active, tandis que dans d'autre pays ces mêmes personnes sont considérées comme ménagères et étudiants, et placées dans la population *inactive*. De telles variations ont une influence considérable sur la comparabilité des données. De même, les différences dans la manière dont sont traités les membres des forces armées et les pensionnaires ou hôtes d'institutions constituent de nouveaux obtacles à la comparabilité des données. Ces disparités et celles qui résultent de la manière dont est traité le groupe des personnes ne travaillant plus, proviennent surtout de l'utilisation de la notion "d'activité habituelle" (travailleurs rémunérés) plutôt que de celle de "main-d'oeuvre".

Certaines personnes, c'est-à-dire, celles exerçant seulement à temps partiel une activité rémunérée, sont classées dans certains pays dans la population active, tandis que dans d'autres elles sont considérées comme inactives. Dans d'autres pays encore, la classification de ces personnes dépend de la proportion du temps qu'elles passent à exercer une activité rémunérée. Toutes ces différences réduisent la comparabilité des données.

Une grande variété existe aussi suivant les pays dans la manière dont sont traités les chômeurs, et particulièrement les personnes cherchant un emploi pour la premiere fois. Dans quelques pays ces personnes sont comprises dans la population active, conformément à la recommandation formulée à ce sujet; dans d'autres elles en sont écartées.

Les âges différents à partir desquels les pays procèdent à la réunion de renseignements sur les caractéristiques économiques de la population constituent également une autre source importante de variation. Dans de nombreux pays, un âge limite inférieur a été fixé pour poser les questions sur l'activité économique, subordonné à l'âge minimum légal à partir duquel il est permis de travailler et à l'âge de scolarité obligatoire. Non seulement il est impossible d'après cette méthode de savoir combien d'enfants qui se trouvent au—dessous de l'âge fixé ont un emploi, mais encore elle compromet fortement la comparabilité des données à cause de différences dans les âges choisis et du fait que, généralement, le classement des données ne permet pas de retrouver tous les enfants au-dessous de cet âge dans les répartitions établies. Un examen du tableau 16 révèle que trois pays ont choisi 15 ans comme âge minimum; 16 ont commencé leur classification à partir de l'âge de 14 ans; 6 ont employé 12 ans; 13 ont fixé la limite inférieure à 10 ans; et un pays à 5 ans. Il est évident qu'étant donné cette situation, la proportion de la population totale considérée comme active ne peut être strictement comparable d'un pays à l'autre.

Les problèmes de comparabilité posés par les divergences dans les définitions, dont il a déjà été question, ont surtout trait aux statistiques relatives aux femmes, adolescents et personnes âgées, parce qu'un grand nombre de personnes appartenant à ces groupes exercent un travail familial non rémunéré ou sont occupées à des travaux saisonniers ou intermittents. Pour cette raison la comparabilité des statistiques relatives aux hommes est, en général, bien meilleure que celles qui se rapportent aux femmes, et le terrain d'élection pour des comparaisons sur le plan international serait fourni par les données relatives aux hommes se trouvant dans l'intervalle d'âge de travail médiant.

En évaluant la comparabilité, il conviendra de se souvenir que les données sur la répartition de la population en active et inactive se rapportent à une certaine période très proche de la date du recensement. Ce ne sont point là des statistiques "périodiques." Par suite, et bien que de telles caractéristiques se modifient lentement, il faudra tenir compte des changements subis dans le temps, particulièrement, lors de périodes anormales, telles que les périodes de guerre ou d'après-guerre.

La comparabilité des statistiques de différents pays pour la même année peut également être affectée par les pratiques nationales relatives aux travaux saisonniers. Parmi celles-ci, on peut citer le déplacement de la main-d'oeuvre vers le secteur agricole au moment de la moisson, l'emploi des femmes et des étudiants en tant que vendeurs et dans certaines industries, etc., au moment des fêtes et les changements d'activités suivant la saison sèche ou la saison humide dans certains pays.

Tableau 14

Le tableau 14 est le plus complet, au point de vue géographique, des trois tableaux sur les caractéristiques économiques publiés dans cette édition. Il indique la popu-

[18]Organisation des Nations Unies, Département des questions sociales, Division de la population, Département des questions économiques, Bureau de statistique. Document ST/SOA/SER.A/9, New-York.

lation totale de chaque sexe ainsi que la proportion en nombres absolus et pour cent du total dans la population active à chaque recensement effectué de 1945 à 1954. La population dont il est question est la population présente "rectifiée" à l'intérieur des frontières actuelles des pays considérés.

Par population active on entend toutes les personnes exerçant ou capable d'exercer un travail productif dans une branche quelconque d'activité économique pendant une certaine période, c'est-à-dire, personnes occupées et chômeurs.

Portée: On a publié dans ce tableau des données en provenance de 110 recensements pour 102 pays et territoires. Les chiffres fournis par les recensements ayant porté sur l'ensemble du territoire ou de la population aussi bien que ceux n'ayant touché qu'une certaine partie de la population ont été reproduits ici afin d'assurer une portée maximum au tableau.

Calcul des pourcentages: Les pourcentages expriment le nombre de personnes actives, quelle que soit la définition de ce terme, pour 100 personnes dans la population totale. Ils fournissent le rapport $\frac{\text{"producteurs"}}{\text{"personnes à charge"}}$. Du fait qu'aucun compte n'est tenu du facteur limitatif que constitue l'âge, le numérateur se rapporte souvent à la partie de la population ayant dépassé un certain âge tandis que le dénominateur comprend des personnes de tous âges. On se rendra mieux compte de l'influence de ce facteur en comparant ces pourcentages avec les valeurs correspondantes, pour certains âges seulement, publiées dans le tableau 15.

Insuffisances des données: On retrouvera dans ce tableau récapitulatif les mêmes problèmes posés par la variété des définitions de la population active que ceux dont il a déjà été question à la page 72. La comparabilité des chiffres absolus est affectée par le fait que les divers recensements ont été effectués à des dates différentes de l'année. Par exemple, les travaux saisonniers tels que ceux exercés par certaines fractions de la population pendant les fêtes, le déplacement de la main-d'oeuvre pendant la moisson, et les travaux agricoles en particulier au printemps, ont une influence sur les résultats des recensements effectués à ces époques. De tels chiffres ne sont pas directement comparables à ceux provenant de recensements exécutés durant des périodes soit-disant "normales". On ne se rend pas facilement compte de l'hétérogénéité de la structure de la population active en examinant le tableau, si ce n'est peut-être dans les différences d'âges, mais il importe de ne pas l'oublier en utilisant les données. Dans la mesure du possible, l'âge à partir duquel la population est considérée comme active dans chaque pays, est indiqué en note.

Comme toutes les données en provenance d'un recensement, celles-ci sont affectées par des divergences dans la définition de la population totale et la mesure dans laquelle le dénombrement est complet. Ces problèmes ont été exposés en détail à la page 52.

Tableau 15

La population active fournie par chaque recensement effectué entre 1945 et 1954 a été répartie par âge et par sexe dans le tableau 15, où l'on trouvera également la répartition pour cent des personnes actives dans chaque groupe d'âge. On peut ainsi procéder dans ce tableau à des comparaisons de pays à pays entre les chiffres relatifs à des intervalles d'âge correspondants. Etant donné que la composition par âge d'une population détermine sa capacité de production, ces données sont importantes aussi bien au point de vue démographique qu'au point de vue de l'analyse économique. C'est la première fois que sont publiées des statistiques de cette nature aussi détaillées dans l'*Annuaire démographique,* le tableau correspondant de l'édition de 1949-50 ne comprenant que trois grands groupes d'âge.

Des données pour 16 groupes d'âge sont publiées dans le tableau 15, c'est-à-dire, moins de 15 ans, 15 à 17 ans, 18 à 19 ans, groupes d'âge quinquennaux jusqu'à 74 ans, 75 ans et plus et âge inconnu. On a adopté cette classification qui est plus détaillée que celle recommandée par la Commission de la Population de l'Organisation des Nations Unies[19] (mais à laquelle on peut l'adapter), afin de fournir des données sur la population de 18 ans et plus.

Portée: A cause de la classification des données par âge. la portée géographique de ce tableau est limitée à 67 pays et territoires alors que 102 étaient représentés dans le tableau récapitulatif qui porte le numéro 14.

Calcul des pourcentages: Les pourcentages dans ce tableau expriment le nombre de personnes (du sexe masculin ou féminin) d'un âge donné faisant partie de la population active, pour 100 personnes du même sexe et dans le même groupe d'âge de la population totale, active et inactive. Il s'agit ainsi de pourcentages par âge et par sexe représentant le rapport des producteurs au nombre total de personnes du même sexe et dans le même groupe d'âge. La proportion du "total" que forme la population active de tous âges (définie comme précédemment) est dans ce tableau limitée à certains âges, c'est-à-dire, que le pourcentage est calculé en faisant le rapport de la population active ayant dépassé un certain âge à la partie de la population totale ayant également atteint cet âge.

Insuffisances des données: La comparabilité des données sur la population active est compromise par les insuffisances classiques relatives à la population totale dont il a déjà été question, à savoir lacunes dans le recensement et différences dans la définition de la population totale. De plus, sur le plan international ces statistiques ont une valeur limitée en ce sens qu'elles se rapportent à une certaine date, qui n'est pas exactement comparable d'un pays à l'autre. Il arrive que, non seulement les dates diffèrent mais encore que des dates identiques peuvent avoir des significations différentes suivant la période à laquelle se placent les travaux saisonniers dans les pays considérés. C'est ainsi que dans certains d'entre eux, beaucoup plus de personnes appartenant à la population d'âge scolaire sont employées pendant les "grandes vacances" et la structure par âge en est affectée si le recensement a été effectué à cette époque de l'année. C'est là un facteur à ne pas oublier en valuant la comparabilité des données.

Les répartitions par âge sont également sujettes à plusieurs anomalies propres aux méthodes de définition, de rassemblement et d'exploitation des données. Ces différents problèmes ont été exposés précédemment à la page

[19] Rapport de la Commission de la Population (Quatrième session), document E/1313, p. 23.

66 où l'on trouvera aussi la description d'une méthode d'évaluation de l'exactitude des déclarations d'âge.

Cependant, les obstacles fondamentaux à la comparabilité de ces données sont ceux qui résultent des différences de base sur le plan international dans la notion de "main-d'oeuvre". Ces différences ont été décrites en détail à la page 72. On a simplement éliminé ici les variations causées par le choix de l'âge "légal" d'entrée en activité. Du fait que les données de ce tableau sont réparties par âge il serait possible de choisir une fraction de la population active entre certains âges pour procéder à des comparaisons intéressantes sur le plan international. La publication d'un total partiel pour les personnes actives de "15 ans et plus" constitue un pas dans cette direction.

Tableau 16

Le tableau 16 présente des données sur la population active classée selon l'industrie (branche d'activité économique), la situation dans la profession et le sexe. Ces statistiques proviennent des recensements de population effectués entre 1945 et 1954.

Sauf indication contraire, les chiffres se rapportent à la population présente "rectifiée" à l'intérieur du territoire actuel du pays considéré et la "population active" est définie comme l'ensemble de personnes exerçant ou capable d'exercer une activité économique quelconque pendant une certaine période, c'est-à-dire, qu'elle comprend les personnes occupées et les chômeurs (voir page 72). On a publié des données pour chaque sexe et pour l'ensemble de la population. Par industrie on entend branche d'activité économique, et la classification repose sur la nature de l'établissement dans lequel l'individu est employé. A l'exception de légères modifications de terminologie relatives à la dernière catégorie, les 9 branches pour lesquelles des chiffres ont été indiqués dans le tableau 16 sont celles de la *Classification internationale type, par industrie, de toutes les branches d'activité économique* adoptée par la Commission de Statistique.[20]

Sauf indication contraire, les chômeurs qui ont déjà travaillé sont classés d'après la branche d'activité économique dans laquelle ils se trouvaient auparavant, tandis que les personnes cherchant du travail pour la première fois sont classées dans la catégorie "inclassable ailleurs" Branche 9. On a indiqué par des crochets ou décrit en note les cas dans lesquels on s'est écarté de cette classification.

La classification selon la situation dans la profession est celle recommandée par la Commission de la Population et la Commission de Statistique et comprend les cinq catégories suivantes: 1) employeurs, 2) personnes travaillant à leur propre compte, 3) employés et ouvriers, 4) travailleurs familiaux non rémunérés, et 5) inclassables ailleurs. Les chômeurs qui ont déjà travaillé sont supposés avoir été classés d'après la situation qu'ils avaient dans leur dernier emploi, sauf indication contraire, et les personnes cherchant un emploi pour la première fois ont été classées dans la catégorie "inclassable ailleurs". Pour plus de commodité, le nombre de ces chômeurs est indiqué en note lorsqu'il est connu. Lorsque la classification d'un pays s'écarte des catégories fondamentales mentionnées on l'a indiqué au moyen de nouveaux en-têtes signalant la catégorie utilisée.

Portée: Le tableau 16 présente la population active selon la branche d'activité économique, la situation dans la profession et le sexe pour 80 pays et territoires. Bien que ce soit là le tableau le plus complet dans ce domaine publié dans l'*Annuaire démographique,* il n'est pas aussi étendu qu'il paraît à première vue parce que 12 des répartitions consistent seulement en totaux marginaux par branche d'activité économique et par situation dans la profession. Les données classées seulement par branche d'activité économique ou par situation dans la profession n'ont pas été publiées dans ce tableau.

Dans la mesure du possible, on a indiqué les données relatives à l'ensemble des pays considérés. Des répartitions se rapportant à une partie seulement du pays ou du territoire ou de sa population n'ont été publiées qu'à défaut de chiffres pour la population totale.

Insuffisances des données: Il a déjà été question des problèmes particuliers de comparabilité soulevés par des différences dans la définition de la population active, y compris les variations ayant trait à la fixation de l'âge d'entrée en activité. Ils ont également leur influence sur les données du tableau 16.

En outre, la comparabilité de ces données est compromise par l'hétérogénéité des définitions des divers groupes de situations dans la profession et de branches d'activité économique. Dans certains pays, les directeurs et gérants d'entreprises sont classés avec les employeurs et non avec les salariés. Souvent, les travailleurs familiaux non rémunérés ne font pas l'objet d'une catégorie spéciale et on ne sait alors dans laquelle ils se trouvent. Une femme associée à l'entreprise de son mari est classée dans certains pays comme travailleur familial non rémunéré tandis qu'il arrive qu'elle soit considérée dans d'autres comme employeur ou personne travaillant à son propre compte. Le même problème de démarcation se pose lorsqu'il s'agit de distinguer les employeurs des personnes travaillant à leur propre compte. Les chômeurs sont soit classés d'après leur situation antérieure, soit placés dans la catégorie des inclassables. Afin de permettre de se faire une idée de la définition utilisée, les omissions et différences dans la classification ont été indiquées dans le tableau chaque fois qu'elles étaient connues.

Les variations dans la définition des branches d'activité ne sont pas aussi graves étant donné que la Classification-type par industrie, est subdivisée en classes. Il existe néanmoins une certaine variété ici encore suivant les pays parce que, certains d'entre eux, n'ont pas adopté la Classification-type. Dans la mesure du possible, on s'est efforcé de faire correspondre les données de ces pays à la Classification-type et les divergences ont été indiquées en note.

Les variations dans la définition de la population totale et les lacunes des recensements dont il a déjà été question à la page 52, jouent également un rôle dans ce tableau.

L'influence de la diversité des âges à partir desquels débute la classification de la population active se fait particulièrement sentir dans le tableau 16. Les limitations dans ce domaine, sont indiquées en note lorsqu'on en a eu connaissance, mais il est difficile sinon impossible de procéder aux ajustements nécessaires, à moins que les données ne soient classées par industrie, situation dans la

[20] Rapport de la Commission de Statistique (Troisième session), document E/795/Add.1.

profession, et âge, ce qui n'est pas très souvent le cas.

5. Fécondité

Tableaux 17 et 18

On a publié dans les tableaux 17 et 18 des statistiques de la population féminine de 15 ans et plus, classées d'une part, selon le nombre d'enfants nés vivants et, d'autre part, selon le nombre d'enfants vivants au moment du recensement. Ces données ont été fournies par les recensements de population effectués entre 1945 et 1954. Sauf indication contraire, elles se rapportent à la population présente "rectifiée" sur le territoire actuel des pays considérés.

Dans ces tableaux, les âges (exprimés en années révolues) sont répartis par groupes quinquennaux allant de 15 à 49 ans avec un groupe d'âge terminal de 50 ans et plus. Les nombres d'enfants indiqués sont 0, 1, 2, 3, 4, 5, 6 à 10, 11 et plus et "inconnu". Les exceptions à cette classification sont indiquées dans le tableau. Au point de vue de l'analyse démographique il eut été désirable d'avoir des groupes d'âge quinquennaux jusqu'à 75 ans et plus et des nombres d'enfants distincts de 1 à 9 et par groupes de 5 jusqu'à 20 et plus,[21] mais on n'a pu se procurer ces renseignements détaillés dans un nombre suffisant de cas pour qu'ils méritent d'être publiés.

En plus de la population féminine suivant le nombre d'enfants nés vivants et encore vivants les tableaux 17 et 18 indiquent le total (ensemble) des enfants déclarés dans chaque groupe d'âge et le rapport de ces enfants à 1 000 femmes (nombre d'enfants pour 1 000 femmes) de chaque groupe.

Portée: 57 pays et territoires sont représentés dans le tableau 17 et 22 dans le tableau 18. Les données se rapportent à l'ensemble du pays ou à la majeure partie de la population. On n'a pas publié de chiffres pour de petites fractions de la population.

Calcul des taux: Les taux ou rapports expriment le nombre d'enfants que les femmes de chaque groupe d'âge ont déclaré avoir eus pour 1 000 femmes dans la population totale. Par suite, on a dû assimiler les femmes qui avaient déclaré un nombre d'enfants inconnu à celles qui n'en avaient déclaré aucun.

Insuffisances des données: La comparabilité de ces données sur le plan international est quelque peu réduite par des variations suivant les pays dans le groupe des femmes auxquelles se rapportent ces statistiques. Les données se rapportent, par définition, à la population féminine de 15 ans et plus. Quelquefois, cependant, elles ont trait à toutes les femmes mariées ou qui l'ont été. D'autres fois elles sont relatives aux "mères" (c'est-à-dire, aux femmes qui ont eu des enfants); dans d'autres cas encore, les données sont signalées comme concernant les femmes "mariées". Certaines de ces différences entrainent des disparités secondaires dans les données de base du fait que les "femmes mariées" peuvent ne déclarer que leurs enfants "légitimes" seulement. Il n'est pas impossible aussi que les mort-nés soient compris dans les chiffres communiqués. Ces variations sont indiqués en note dans les tableaux.

Le nombre de femmes pour lesquelles le nombre d'enfants est inconnu varie également dans des proportions considérables. Comme on l'a déjà mentionné ces différences ont une influence marquée sur les rapports (nombre d'enfants pour 1 000 femmes) qui se trouvent dans la dernière colonne du tableau étant donné que l'on a supposé que le nombre d'enfants "non déclarés" est égal à zéro. Par suite, à l'exception de rapprochements entre territoires où le groupe de femmes considérées est le même et où les "inconnus" (nombre d'enfants inconnu) sont peu importants, ces rapports ne peuvent être utilisés pour procéder à des comparaisons internationales valables des niveaux de fécondité. Ils peuvent toutefois se prêter à des parallèles de l'évolution à terme de la fécondité dans divers pays, ainsi qu'à des comparaisons des différences relatives entre les groupes d'âge.

Dans l'interprétation des données, il y a lieu de ne pas oublier que, dans certains pays, le nombre des enfants déclarés par les femmes appartenant aux groupes d'âges avancés est inférieur au chiffre réel. Les enfants mort-nés (dans les cas où ces naissances sont comprises dans les données) et les enfants qui meurent peu de temps après leur naissance risquent, en particulier, d'être négligés dans les déclarations. Ces omissions agissent en particulier sur le rapport entre le nombre d'enfants nés vivants et le nombre d'enfants encore vivants pour les pays où ces deux types de données sont recueillies. En fait, on peut considérer les écarts d'importance anormale comme la preuve d'omissions de ce genre.

En plus des problèmes particuliers de comparabilité posés par la nature des données, celles-ci sont également sujettes aux exagérations ou lacunes du recensement et influencées, dans une certaine mesure par la variété qui existe dans la définition de la population totale. Ces questions ont déjà été exposées à la page 52.

L'inexactitude des déclarations d'âge mentionnée et évaluée à la page 67 peut avoir aussi une influence importante sur les données des tableaux 17 et 18.

[21] Rapport de la Commission de la Population (Quatrième session), Document E/1313, p. 22.

PARTIE B — STATISTIQUES DE L'ETAT CIVIL

SOURCES DE VARIATIONS

1. Portée géographique et ethnique

Les statistiques de l'état civil qui sont présentées dans les tableaux 19 à 31 de l'*Annuaire démographique* ont été limitées à celles des naissances vivantes, des décès, des mort-nés (morts fœtales tardives), des mariages et des divorces. Cela correspond aux recommandations contenues dans le Principe 201 du document de l'Organisation des Nations Unies intitulé *Principes directeurs d'un système de statistiques de l'état civil*[1] qui comprend en outre dans les statistiques de l'état civil celles des morts

[1] Organisation des Nations Unies, Bureau de statistique des Nations Unies, *Principes directeurs d'un système de statistiques de l'état civil*, Etudes statistiques, Série M. No. 19, New-York, août 1953, 28 pages.

fœtales précoces et intermédiaires, des adoptions, des légitimations, des reconnaissances, des annulations et des séparations légales.

Les *Principes* auxquels on vient de faire allusion sont des recommandations pour l'amélioration et la normalisation des statistiques de l'état civil adoptées par la Commission de Statistique à sa septième session en février 1953 et approuvées par le Conseil économique et social lors de sa quinzième session en avril 1953 dans la résolution [469 D (XV)] qui propose *inter alia* aux gouvernements "de procéder à un examen critique de leurs méthodes d'enregistrement des faits d'état civil et d'établissement des statistiques de l'état civil en tenant comptes des *Principes directeurs d'un système de statistiques de l'état civil,* et d'adopter toutes modifications possibles pour améliorer la qualité et la comparabilité internationale de leurs propres statistiques dans ce domaine".

Bien que les Nations Unies aient suggéré que pour l'enregistrement et la transmission des renseignements statistiques priorité soit donnée aux naissances vivantes, aux décès, aux morts fœtales, aux mariages et aux divorces, les statistiques qui s'y rapportent sont loin d'être disponibles dans la même mesure en partie à cause des différences de portée des législations nationales en ce domaine. Dans certains territoires l'enregistrement n'est pas obligatoire pour l'ensemble de ces cinq faits d'état civil; dans d'autres il ne l'est que pour une partie seulement de la population (c'est-à-dire population "européenne", "civilisée", "non indigène" de certaines régions d'Afrique). Pour d'autres pays, tels que l'Inde et le Pakistan, il n'existe pas de législation nationale qui prescrive l'enregistrement obligatoire, mais seulement des règlements ou décrets municipaux ou promulgués par les Etats qui ne portent pas sur l'ensemble du pays. Il en est encore autrement dans d'autres régions comme la Côte de l'Or où les autorités ont institué des "territoires d'enregistrement" comprenant seulement une partie du pays, le reste étant exclu parce qu'il est d'accès difficile ou parce qu'il est à peu près impossible, pour des raisons d'ordre économique et culturel, d'y procéder à un enregistrement régulier. En examinant les tableaux, on remarquera que l'enregistrement est particulièrement fragmentaire en Afrique, où il ne s'applique le plus souvent qu'à la population "européenne" tandis que la population indigène ne fait généralement l'objet que de quelques statistiques partielles. Pour une grande partie de l'Asie et pour certaines régions de l'Amérique latine, les statistiques issues de l'enregistrement sont incomplètes et de portée inégale.

Ces variations dans l'application des dispositions législatives sur l'enregistrement obligatoire s'écartent de la recommandation suivante des Nations Unies[2]:

a) Conformément à l'ordre de priorité exposé au Principe 201, la loi devrait rendre obligatoire l'enregistrement des faits d'état civil survenant à l'intérieur des frontières du pays pour toutes les sections de la population; il faudrait également que d'autres dispositions assurent le respect de cette obligation.

b) Chaque pays pourrait également prévoir des dispositions complémentaires n'ayant pas force obligatoire, en vue de l'enregistrement des faits d'état civil intéressant les nationaux qui séjournent temporairement à l'étranger.

c) L'efficacité avec laquelle on pourra — ou l'on présume que l'on pourra — appliquer ces dispositions ne devrait pas être un facteur dont on tienne compte au moment de les arrêter.

L'expérience a montré que, en dépit des difficultés manifestes auquel se heurte l'enregistrement périodique des faits et bien que les données transmises soient souvent discutables, c'est seulement en commençant par rendre l'enregistrement obligatoire qu'une amélioration se dessine. L'enregistrement volontaire n'a jamais permis d'obtenir des données complètes.

2. Mesure dans laquelle les données sont complètes

En plus des variations produites par le manque d'uniformité qui existe dans les dispositions législatives nationales concernant l'enregistrement, il existe également des différences dans le degré d'efficacité de lois identiques appliquées dans divers pays. Les modalités d'exécution de la loi et la mesure dans laquelle elle est observée par le public déterminent l'exactitude et le caractère plus ou moins complet des statistiques fournies par les registres de l'état civil.

Code permettant d'évaluer la qualité des données

Bien qu'un examen des statistiques révèle souvent leurs imperfections, une évaluation de leur qualité fondée uniquement sur des séries présentées dans des tableaux tendrait inévitablement à être purement subjective. Afin d'être mieux informé à cet égard, les questionnaires au moyen desquels l'Organization des Nations Unies obtient les données publiées dans l'*Annuaire démographique* ne se bornent pas à solliciter des statistiques mais contiennent également des demandes tendant à faire préciser l'exactitude et le caractère plus ou moins complet des données transmises.

Sur la base des réponses à ces questions et à la suite de recherches effectuées dans les publications officielles autorisées, il a été possible de classer les statistiques de l'état civil des différents pays en trois grandes catégories: 1) celles retraçant de façon complète, ou presque, tous les événements relatifs à l'état civil (naissances, mariages, décès, etc.) survenus chaque année, indiquées par la lettre "C"; 2) celles signalées comme incomplètes ou susceptibles d'être affectées par des irrégularités importantes dans l'enregistrement, désignées par "U" et 3) celles au sujet desquelles il n'a pas été possible d'obtenir de renseignements, reconnaissables au symbole ". . .". Les résultats de cette classification sont reproduits dans la première colonne des tableaux 19, 25, 28, 30 et 31 indiquant l'évolution à long terme du mouvement de la population et qui contiennent les nombres absolus de naissances vivantes, de décès de tous âges, de décès d'enfants de moins d'un an, de mariages et de divorces, ainsi que les taux bruts de natalité, de mortalité, de mortalité infantile et de nuptialité.

Application. — Bien que le code ne soit publié que dans les tableaux retraçant l'évolution à long terme du mouvement de la population, il est applicable, dans les conditions définies ci-dessous, aux statistiques de l'état civil récentes des pays en cause partout où elles figurent

[2] Ibid. Principe 203.

dans l'*Annuaire*. Par suite, en utilisant les données des tableaux 19 à 31, il convient de se reporter au code avant d'essayer de comparer ou d'analyser les statistiques. En ce qui concerne les valeurs des fonctions considérées dans les tables de mortalité (tableau 32), on a généralement déjà procédé aux ajustments imposés par les insuffisances des données de base.

A proprement parler, le code permettant d'apprécier la qualité des données se rapporte aux statistiques de l'état civil mais pas aux chiffres de population pris comme base dans le calcul des taux. Cependant, il importe de souligner que, les deux éléments constitutifs du taux sont solidaires, surtout lorsque les statistiques de l'état civil ont été utilisées pour préparer les estimations de population. Il est possible d'évaluer avec plus de précision encore la qualité des taux en se reportant au code relatif aux estimations de population se trouvant dans le tableau 1.

Il ne faut pas perdre de vue que si, dans un certain nombre de cas, les statistiques conservent un degré élevé de précision pendant toute la période considérée, le code ne s'applique en permanence qu'aux données récentes. Pour les premières années la plupart des séries sont beaucoup plus sujettes à caution que le code le laisse entendre et lorsque le pays en question a pu apprécier exactement la qualité de ses statistiques pour la période considérée, on a indiqué en note l'évaluation correspondante. De telles notes existent pour la République Dominicaine, la Pologne et la Yougoslavie.

On manque de renseignements sur la qualité des statistiques de l'état civil de nombreux pays et territoires, mais il est permis de supposer que pour la plupart d'entre eux la qualité des données fournies est assez douteuse. Le signe (. . .) dans la colonne réservée au code indique donc que les données auxquelles il s'applique doivent être considérées avec une certaine prudence. Un examen des taux calculés ou présumés pour ces territoires révélera aisément les cas dans lesquels une présomption d'insuffisance est probablement justifiée. Toutefois, cette observation n'est valable que lorsque les statistiques présentent des lacunes évidentes. Il ne faut pas oublier, en effet, que les connaissances sur les niveaux "présumés" de fécondité, mortalité et nuptialité relatifs à certaines régions du monde sont extrêmement sommaires et que les cas limites, qui sont les plus difficiles à évaluer, sont fréquents.

La comparabilité dans le temps est réduite au fur et à mesure que l'enregistrement des faits d'état civil devient plus complet au cours des années. Cette amélioration tend à masquer l'évolution réelle des naissances, des décès ou des mariages. Par exemple, une élévation constante des taux bruts de natalité et de mortalité a de fortes chances d'indiquer une amélioration de la portée des statistiques plutôt qu'une augmentation de la fécondité et de la mortalité. De même, l'accroissement du taux de mortinatalité est plutôt un signe de progrès dans l'enregistrement. Par ailleurs, certaines mesures temporaires, comme la suppression des droits d'enregistrement pour encourager les déclarations, risquent de provoquer de brusques augmentations pour certaines années. Lorsque les statistiques comprennent les déclarations tardives, les fluctuations peuvent être particulièrement marquées. Chaque fois que des facteurs de ce genre sont entrés en jeu, on l'a mentionné dans les tableaux. Comme le précisent les renseignements fournis dans les colonnes réservées au code et dans les notes, certaines des données présentées dans les tableaux sont utiles non pas parce qu'elles constituent une mesure des niveaux réels et des variations effectives, mais plutôt parce qu'elles indiquent les pays où il existe un système d'enregistrement et qu'elles reflètent la mesure dans laquelle l'enregistrement des faits d'état civil devient plus complet.

Insuffisances. — La manière dont a été élaboré le classement qualitatif des données écartait la possiblité d'appliquer un critère objectif. Dans de nombreux cas, les éléments pris en considération par le pays intéressé pour apprécier ses propres données n'ont même pas été indiqués. Néanmoins, on a considéré qu'en de telles circonstances, les bureaux de statistiques nationaux étaient les mieux placés pour évaluer la qualité de leurs données et que même les larges catégories instituées à cet effet pourraient utilement renseigner sur la valeur des statistiques présentées dans l'*Annuaire*. On admet que les classifications "C" et "U" du code sont trop approximatives et que leur portée est par trop étendue. Le code, dans sa forme actuelle, ne s'applique qu'aux données exploitées d'après la date de l'événement (voir plus loin). Il est évident que l'exploitation des faits d'état civil d'après la date de leur enregistrement écarte toute possibilité d'utilisation du code puisque les symboles sont destinés à indiquer dans quelle mesure est complet l'enregistrement des faits d'état civil survenus dans l'année. Afin qu'il soit possible de procéder à une classification plus nuancée des données, une appréciation plus objective de leurs statistiques par les différents gouvernements est expressément recommandée dans le Principe 106 ci-après du document déjà cité[3]:

> *106. Evaluation de la valeur du système de statistiques de l'état civil*
>
> *a)* Pour compléter ces mesures de coordination, il faudrait désigner une autorité chargée de mettre au point et d'appliquer des méthodes permettant d'apprécier la valeur du système de statistiques de l'état civil.
>
> *b)* Les éléments d'appréciation seront plus ou moins détaillés selon le degré de développement du système, mais devraient comprendre, à un stade donné, des études approfondies ayant pour but de déterminer jusqu'à quel point l'enregistrement et les statistiques des faits sont complets, ce qui permettrait d'apprécier l'exactitude quantitative des statistiques de l'état civil; on pourrait aussi juger dans quelle mesure les renseignements relatifs aux faits démographiques sont complets et exacts et essayer de déterminer jusqu'à quel point les programmes d'exploitation statistique des données de base répondent aux besoins des utilisateurs, notamment pour ce qui est de leur qualité, de leur caractère plus ou moins satisfaisant et de l'efficacité même du système.

Au fur et à mesure que les pays appliqueront ces principes, on espère enregistrer de nouveaux progrès dans le sens d'une appréciation plus nuancée, plus uniforme et plus objective de ces données.

3. Méthodes d'exploitation des données

Population présente

Ainsi qu'on l'a indiqué précédemment et conformé-

[3] Ibid.

ment à la partie *c* du Principe 409[4] du document déjà mentionné, les statistiques de l'état civil présentées dans l'*Annuaire* se rapportent à la population de fait ou population présente et les cas particuliers sont signalés en note. On ne s'est écarté de cette règle qui consiste à indiquer en note les cas qui ne correspondent pas à la définition générale, que dans les tableaux 25, 26 et 27 où la répartition des décès survenus parmi les forces armées est expliquée dans la mesure du possible, qu'elle constitue ou non une exception au principe de la population présente. En conséquence, sauf indication contraire, les tableaux des statistiques de l'état civil se rapportent à des faits qui sont survenus dans l'ensemble de la population comprise à l'intérieur des frontières des pays considérés.

Dans les Principes 402 et 403,[5] on a reconnu la nécessité de faire une distinction, à l'échelle nationale, entre les statistiques provenant de territoires où l'enregistrement est à peu près complet et ceux pour lesquels il est incomplet. Ces Principes recommandent la création de "zones ou aires d'exploitation" ainsi que l'établissement d'exploitations distinctes et, peut-être moins détaillées, pour certaines catégories importantes de la population à l'intérieur desquelles l'enregistrement des faits d'état civil est incomplet ou au sujet desquelles la quantité ou la qualité des données de base est très insuffisante. Les "zones d'exploitations" sont définies comme le "territoire à l'intérieur duquel la portée de l'enregistrement et la précision des renseignements sont conformes à certains critères nationaux, c'est-à-dire, celui sur lequel portent les opérations d'exploitation qui produisent les statistiques nationales."

Conformément à ces *Principes,* les statistiques de certains pays ne comprennent pas les données relatives à une partie de la population pour laquelle l'enregistrement, bien qu'obligatoire, n'est pas suffisamment complet et les statistiques sujettes à caution. Parmi les pays qui procèdent de cette façon on peut citer, Panama et le Venezuela, où les statistiques de l'état civil ne comprennent pas celles des tribus indiennes; le Pérou dont la population de la jungle n'est pas comptée; la Guyane britannique, le Surinam, Taiwan et l'Australie qui ne comprennent pas dans leurs chiffres les statistiques concernant les aborigènes. On a indiqué en note dans les tableaux tous les cas dans lesquels les statistiques ne portent que sur une partie du territoire national ou de la population du pays.

Exploitation des données d'après la date de l'événement

Autant que possible les données figurant dans les tableaux se rapportent à des événements survenus pendant l'année spécifiée plutôt qu'à ceux simplement enregistrés au cours de cette période. Cela correspond au Principe[6] ci-après du document déjà cité:

> *408. Exploitation d'après la date de l'événement ou d'après la date de l'enregistrement*
>
> *a)* L'exploitation principale des bulletins portant sur une période quelconque du calendrier de l'année civile doit s'effectuer d'après les faits survenus durant cette période (naissance, décès, mariage, etc.) et non ceux qui ont été seulement enregistrés pendant celle-ci. S'il s'avérait nécessaire, du point de vue administratif, d'exploiter les données définitives suivant la "date de l'enregistrement" plutôt que suivant la "date de l'événement", il y aurait lieu d'évaluer dans quelle mesure les résultats obtenus d'après la "date de l'enregistrement" coïncident avec ceux obtenus d'après la "date de l'événement" et il serait souhaitable d'indiquer le rapport existant entre ces deux classifications.

Cependant, dans un nombre considérable de pays, dont on trouvera la liste plus loin, les statistiques sont établies d'après la date de l'enregistrement et non d'après celle de l'événement. De telles statistiques peuvent prêter à confusion.

Si l'enregistrement est rapide, la différence entre les statistiques établies des deux façons peut être négligeable. Mais dans le cas où il existe une certaine proportion de déclarations tardives, les statistiques de l'état civil établies d'après la date de l'enregistrement ne sont pas comparables du point de vue international, les déclarations tardives faisant alors partie des statistiques de l'année où les naissances, décès, mariages, divorces, etc. ont été enregistrés plutôt que de celles où ils ont eu lieu. En outre, lorsque dans un pays donné le nombre des faits d'état civil enregistrés d'une année à l'autre varie énormément par suite de la mise en vigueur de mesures spéciales destinées à encourager l'enregistrement ou de la nécéssité de posséder une preuve de la naissance ou du décès pour satisfaire certaines demandes, les statistiques de l'état civil établies d'après la date de l'enregistrement ne peuvent être considérées comme l'indice du nombre de naissances, décès, mariages ou divorces qui se sont effectivement produits durant l'année spécifiée. Les statistiques "d'enregistrements" comprennent toujours des faits qui sont survenus l'année précédente et souvent, surtout en ce qui concerne particulièrement les pays qui n'ont pas une organisation statistique très développée, certains d'entre eux qui se sont produits il y a plusieurs années.

Il convient également de souligner que le délai accordé pour l'enregistrement d'un fait d'état civil varie beaucoup d'un pay à l'autre. Ainsi, même là où il n'y a pas de déclarations tardives, l'exploitation des données d'après la date de l'enregistrement ne peut produire de statistiques strictement comparables entre divers pays. Un examen des différences considérables entre pays dans le délai imparti pour l'enregistrement des faits d'état civil suffit à illustrer cette affirmation d'autant plus que les enregistrements ne sont pas tous effectués pendant la période accordée par la loi.

Le délai légal pour l'enregistrement courant des naissances vivantes varie d'un jour (vingt-quatre heures) dans certains régions des Etats-Unis d'Amérique où la population est extrêmement dense, à soixante-deux jours en Nouvelle-Zélande, à quatre-vingt-dix jours dans certaines parties du Brésil éloignées d'un bureau de l'état civil et à un an à Cuba. Les décès doivent être enregistrés dans un délai de vingt-quatre heures dans la plupart des pays, mais le temps accordé varie, atteignant trente jours dans la Nouvelle-Galles du Sud et le Queensland (Australie). L'enregistrement des mariages fait le plus souvent partie de la cérémonie, mais dans quelques cas, on a

---

[4] *c*) En général, l'exploitation des données de base relatives au territoire national doit porter sur celles concernant des faits qui se sont produits à l'intérieur des frontières nationales; toutefois, dans certains cas, par exemple pendant la guerre, il peut être nécessaire de prévoir une exploitation des données sur les décès survenus aux armées en garnison hors du territoire national.

[5] *Principes directeurs d'un système de statistiques de l'état civil, op. cit.*

[6] Ibid.

jusqu'à trente jours pour y procéder. Les divorces sont inscrits sur les registres du tribunal en cause dès qu'ils ont été prononcés mais dans certains pays une seconde inscription de l'arrêt doit être faite sur les registres de l'état civil, et un délai considérable peut s'écouler entre les deux enregistrements. Il est évident, dans ces conditions, que l'exploitation des données d'après la date de l'enregistrement ne peut absolument pas produire de chiffres comparables.

Symbole. — Afin que les utilisateurs des données se rendent compte de la présence d'une source importante d'erreur en puissance dans les statistiques, les pays qui établissent leurs statistiques d'après la date de l'enregistrement sont indiqués dans les tableaux par une croix (†). Des renseignements ne sont pas disponibles pour tous les pays et territoires représentés dans les tableaux, mais ceux sur lesquels on en possède se divisent en deux groupes, de la façon suivante:

Pays pour lesquels les données se rapportent à la date de l'événement:

Albanie
Allemagne Occidentale et Berlin-Ouest
Angleterre et Pays de Galles
Autriche
Belgique
Birmanie
Bolivie
Bulgarie
Canada
Corée du Sud
Costa Rica
Danemark
Espagne
Etats-Unis
Finlande
France
Honduras
Hongrie
Iles Maldives
Inde
Indonésie
Iran
Islande
Italie
Jamaïque
Japon
Jordanie
Liechtenstein
Luxembourg
Monaco
Norvège
Pakistan
Panama
Pays-Bas
Philippines
Pologne
Portugal
République Dominicaine
Roumanie
Saint-Marin
Sarre
Suède
Suisse
Tchécolosvaquie
Union Sud-Africaine
Yougoslavie

Pays pour lesquels les données se rapportent à la date de l'enregistrement:

Argentine
Australie
Barbade
Bornéo du Nord
Ceuta
Ceylan
Chili
Colombie
Côte de l'Or
Cuba
Dominique
Ecosse
Egypte
Equateur
Grèce
Guatemala
Guinée Espagnole
Guyane Britannique
Honduras Britannique
Hong-Kong
Iles Bermudes
Iles Cook
Iles Falkland
Iles Fidji
Ile Maurice
Iles sous le Vent
Irlande du Nord
Irlande (République)
Israël
Liban
Macao
Malte et Gozo
Melilla
Mexique
Nicaragua
Nouvelle-Zélande
Nyassaland
Ouganda
Paraguay
Pérou
Rhodésie du Nord
Rhodésie du Sud
Saint-Vincent
Salvador
Samoa Occidental
Singapour
Sud-Ouest Africain
Syrie
Taïwan
Thaïlande
Trinité et Tobago
Uruguay
Venezuela

En ce qui concerne la plupart des pays ou territoires qui ne figurent dans aucune de ces listes, il semble probable que les données se rapportent à la date de l'enregistrement. Lorsqu'il s'agit d'un territoire non-autonome, il est à présumer que la procédure suivie dans le pays qui l'administre l'est également dans ses dépendances.

Application du symbole. — Il convient de remarquer que ce facteur est particulièrement important en ce qui concerne les statistiques des naissances pour lesquelles le délai d'enregistrement légal varie largement (et plus encore celui qui sépare effectivement l'événement de l'enregistrement). Néanmoins, on trouve ce symbole (†) dans tous les tableaux présentant des statistiques de l'état civil à l'exception de celui relatif aux divorces.

Cette distinction a moins de portée pour les statistiques des décès que pour celles des naissances car le code sanitaire de la plupart des pays prescrit leur enregistrement afin d'obtenir un permis d'inhumer. Cette obligation tend à activer l'enregistrement. Le symbole a un sens encore plus réduit à l'égard des mariages dont l'enregistrement, dans de nombreux pays, fait partie de la cérémonie ou doit être effectué dans un délai assez court. Enfin ce facteur perd presque sa signification lorsqu'il est question de "mort-nés" parce que, dans ce cas également, un permis d'inhumer est nécessaire et aussi parce qu'il est assez peu probable qu'il existe des déclarations tardives à ce sujet.

4. Définition, à des fins statistiques, des faits d'état civil

Une autre source de variations, bien que de moindre importance, réside dans la définition, à des fins statistiques, des faits d'état civil, particulièrement des naissances vivantes, des décès et des mort-nés.

Avant 1950, la définition internationale[7] du "mort-né" était la suivante:

> *Le produit est "mort-né" quand il y a naissance d'un fœtus viable (vingt-huit semaines) dans lequel la respiration pulmonaire ne s'établit pas, sa mort pouvant s'être produite: a) avant, b) pendant ou c) après l'accouchement, mais en tout cas avant qu'il ait respiré.*

Il était nécessaire d'adopter un critère uniforme et précis pour différencier un mort-né d'autres produits de la gestation humaine qui n'ont pas encore atteint le stade de développement permettant de les classer avec les "mort-nés" afin d'assurer l'exactitude et la comparabilité des statistiques de la mortinatalité par opposition à celles des "avortements" ou des "fausses couches" comme on les désigne communément. Cependant au point de vue de l'exactitude et de la comparabilité des statistiques des naissances vivantes et des décès, il est encore plus important de fixer un critère précis et uniforme permettant de

[7] Société des Nations, Comité d'hygiène, *Rapport de la Commission étudiant la définition de la mortinatalité*, C.M.1925.C.224.M.80, appendice 2, p. 76.

distinguer, dans le domaine statistique, les mort-nés des naissances vivantes.

Dans certains pays, à savoir, l'Espagne, Cuba, l'Equateur et les possessions espagnoles de Ceuta et Melilla, il faut que le nouveau-né ait vécu 24 heures après sa naissance pour pouvoir être enregistré avec les naissances vivantes. Les nouveau-nés qui décèdent avant l'expiration de la période de 24 heures sont de ce fait, classés avec les "avortements" et, par suite du manque de dispositions légales à cet égard, ne sont comptés ni parmi les statistiques des naissances vivantes ni parmi celles des décès. De même, dans plusieurs régions, les enfants nés vivants qui décèdent avant l'enregistrement de leur naissance, quel que soit leur âge au moment du décès, sont considérés comme "mort-nés" et ne figurent ni sur le registre des naissances vivantes, ni sur celui des décès. Il arrive que dans d'autres pays de tels cas soient enregistrés avec les "décès et non avec les naissances vivantes.

A moins que des classifications spéciales n'aient été prévues, les statistiques des naissances vivantes et celles des décès sont déficitaires d'un nombre égal à celui de ces cas et le nombre de mort-nés accru d'autant. En conséquence, les taux de mortinatalité seront supérieurs à la réalité et les taux bruts de natalité et de mortalité seront sous-évalués dans une certaine mesure. Cette situation a également une influence sur le taux de mortalité infantile car bien que les éléments constitutifs du taux accusent exactement la même insuffisance en valeur absolue, le taux tend à être sous-évalué parce que la sous-évaluation est proportionnellement plus grande par rapport au nombre d'enfants morts avant l'âge d'un an qu'elle ne l'est par rapport au nombre de naissances.

Un défaut de comparabilité attribuable à des divergences dans les définitions adoptées existe également dans les statistiques des mariages et des divorces. Bien que le mariage et le divorce soient des actes de caractère juridique plutôt que des faits biologiques ainsi qu'on le verra plus loin, la composition des statistiques transmises peut produire des disparités entre les pays. C'est ainsi que, dans certains d'entre eux, la statistique des mariages légaux se rapporte seulement aux cérémonies religieuses qui ont été célébrées; dans d'autres, elle n'a trait qu'aux mariages civils; dans d'autres enfin, les mariages civils et religieux sont tous deux considérés comme légaux. Dans tous les pays, les unions non enregistrées à l'état civil et connues généralement sous le nom de "consensuelles", "de droit commun" et "coutumières" etc. . . . sont exclues des statistiques mais il en résulte malgré tout un défaut de comparabilité des statistiques de la "formation des mariages" dans le sens démographique du mot parce que la proportion de telles unions varie grandement d'un pays à l'autre.

Recommandations sur le plan international

Les difficultés de comparaison provenant de cette source s'atténueront à mesure que les normes internationales de définition et de classification seront adoptées. Certains progrès dans la mise au point de normes internationales ont déjà été réalisée à la suite des travaux du Comité d'experts des statistiques sanitaires de l'Organisation Mondiale de la Santé qui a recommandé, en 1950, des définitions uniformes de la naissance vivante, de la mort foetale et du mort-né que les différents pays ont été invités à adopter. De nouveaux progrès ont été faits dans cette voie et ont été étendus à d'autres faits d'état civil lorsque le Conseil Economique et Social des Nations Unies a approuvé les *Principes directeurs d'un système de statistiques de l'état civil.*[8] L'un de ces Principes contient la définition normalisée, à des fins statistiques, de chacun des faits d'état civil au sujet desquels il est possible de recueillir des données par la méthode de l'enregistrement. Cette recommandation qui a pour but d'éliminer le défaut de comparabilité signalé précédemment est la suivante:

202. Définition, à des fins statistiques, de chacun des faits d'état civil au sujet desquels il est possible de recueillir des données par la méthode de l'enregistrement

a) La définition de chacun des faits au sujet desquels on recueille des données en vue d'établir des statistiques de l'état civil doit correspondre dans la mesure du possible à la définition donnée à des fins statistiques au paragraphe *c)* ci-après.

b) Au cas où il serait impossible de concilier les définitions ou notions juridiques usitées dans un pays avec les définitions données ci-après, il y aurait lieu de prendre des dispositions pour faire les relevés statistiques d'après des définitions qui ne s'écartent pas, en leur principe, de celles qui figurent ci-après. S'il était impossible de prévoir des dispositions de ce genre, il faudrait donner une description exacte des divergences qui existent dans les publications où paraissent les statistiques de l'état civil.

c) Il est recommandé d'adopter, pour l'établissement des statistiques de l'état civil, les définitions suivantes:

1) La *naissance vivante* est l'expulsion ou l'extraction complète du corps de la mère, indépendamment de la durée de la gestation, d'un produit de la conception qui, après cette séparation, respire ou manifeste tout autre signe de vie, tel que battement du cœur, pulsation du cordon ombilical ou contraction effective d'un muscle soumis à l'action de la volonté, que le cordon ombilical ait été coupé ou non et que le placenta soit ou non demeuré attaché; tout produit d'une telle naissance est considéré comme "enfant né vivant".

Tous les enfants nés vivants devraient être enregistrés et comptés comme tels, quelle que soit la durée de la gestation, qu'ils soient morts ou vivants à l'époque de l'enregistrement; ceux d'entre eux qui décèdent à n'importe quel moment après la naissance devraient également être enregistrés et comptés comme "décédés".

2) Le *décès* est la disparition permanente de tout signe de vie à un moment quelconque, postérieur à la naissance vivante (cessation des fonctions vitales après la naissance sans possibilité de ressuscitation). Cette définition ne comprend donc pas les morts fœtales.

3) La *mort fœtale* est le décès d'un produit de la conception lorsque ce décès est survenu avant l'expulsion ou l'extraction complète du corps de la mère, indépendamment de la durée de la gestation; le décès est indiqué par le fait qu'après cette séparation le fœtus ne respire ni ne manifeste aucun autre signe de vie, tel que battement du cœur, pulsation du cordon ombilical ou contraction effective d'un muscle soumis à l'action de la volonté.

[8] *Op.cit.*

4) *Mortinatalité* est, par définition, synonyme de mort fœtale tardive, c'est-à-dire survenue au bout de la vingt-huitième semaine de gestation ou au-delà.

5) Le *mariage* est l'union légale de personnes de sexe différent. L'union peut être rendue légale par une procédure civile ou religieuse ou par toute autre procédure reconnue par la loi du pays; quelle que soit la procédure utilisée, tous les mariages devraient être déclarés aux fins d'établissement des statistiques de l'état civil.

6) Le *divorce* est la dissolution légale et définitive des liens du mariage, c'est-à-dire la séparation de l'époux et de l'épouse par décision judiciaire conférant aux parties le droit de se remarier civilement ou religieusement, ou les deux à la fois, conformément aux lois en vigueur dans chaque pays.

Les Principes comprennent également des recommandations en vue de définir "l'adoption", la "légitimation", la "reconnaissance", l'"annulation" et la "séparation légale", mais comme aucune statistique relative à ces faits ne figure dans l'*Annuaire,* les définitions n'ont pas été reproduites ici. Il est hors de doute que l'adoption progressive des définitions recommandées sera un excellent moyen d'éliminer les variations et différences déjà mentionnées que l'on trouve à présent dans les tableaux.

DESCRIPTION DES TABLEAUX

1. Statistiques des naissances vivantes

Comme cette édition de l'*Annuaire* est consacrée aux statistiques fournies par les recensements de population, les statistiques de l'état civil ont été strictement limitées aux données de base nécessaires pour maintenir la continuité d'une année à l'autre. Les tableaux 19 à 23 présentent des statisques des naissances vivantes. Sauf indication contraire, les mort-nés et autres morts fœtales ne sont pas compris dans ces statistiques; les naissances illégitimes y figurent et, dans tous les cas d'accouchements multiples, chacun des enfants est compté séparément.

En général, les données présentées concernent les naissances vivantes survenues à l'intérieur des frontières actuelles du pays considéré et parmi la population présente. Par suite, on peut supposer qu'elles comprennent celles qui se sont produites parmi les tribus nomades, les aborigènes, les personnes déplacées, les réfugiés de guerre et les étrangers résidant dans le pays au moment de la naissance. A moins d'indication contraire, il est à présumer qu'elles ne comprennent pas les naissances survenues à l'étranger, parmi les résidents du pays.

On a déjà passé en revue les insuffisances des statistiques de l'état civil lorsqu'on a fait allusion au code permettant d'évaluer la qualité des données, aux conséquences de l'établissement des statistiques d'après la date de l'enregistrement plutôt que d'après celle de l'événement, au résultat de variations dans la définition de chaque fait d'état civil, etc. Une source supplémentaire d'imperfections est particulière aux statistiques des naissances vivantes. Elle consiste dans la tendance qu'ont tous les pays, quelle que soit leur définition du mort-né, à ne pas porter sur le registre des naissances vivantes ceux des enfants qui, bien que nés vivants, décèdent avant l'enregistrement de leur naissance.

Dans la plupart des pays, l'officier de l'état civil est tenu par la loi de s'assurer que pour chaque enregistrement du décès d'un enfant de moins d'un an existe l'enregistrement correspondant d'une naissance vivante. Cependant cette disposition est quelquefois limitée légalement dans son application comme, par exemple, au Chili où l'officier de l'état civil est obligé de vérifier l'enregistrement de la naissance, seulement si l'enfant dont le décès est déclaré a moins de trente jours. Soit du fait même de la législation, soit par négligence, il existe indubitablement dans tous les pays un certain relâchement dans l'application de la loi, particulièrement lorsque l'âge au décès est supérieur à un mois. De ce fait il est probable qu'on omet toujours d'enregistrer un certain nombre de naissances vivantes dans presque tous les pays. Quelquefois, il arrive que les enfants décédés peu après leur naissance soient considérés comme "mort-nés" et enregistrés en tant que tels s'il existe un enregistrement des "mort-nés" et dans ce cas les statistiques des naissances vivantes et des décès sont incomplètes tandis que celles des mort-nés sont supérieures à la réalité. D'autres fois, ces naissances vivantes non enregistrées sont portées sur les registres des décès mais alors elles ne sont pas considérées comme des naissances. Il importe donc de ne pas oublier ces détails en utilisant les statistiques des naissances vivantes surtout s'il s'agit de celles relatives à des pays où le délai accordé pour faire la déclaration à l'état civil est relativement long.

Tableau 19

Ce tableau présente des données nouvelles et rectifiées sur l'évolution des naissances vivantes et des taux bruts de natalité de 1946 à 1954 ainsi que les moyennes quinquennales des taux annuels correspondants pour la période de 1920 à 1934.

Portée: Des statistiques pour un ensemble de 172 pays et territoires sont publiées dans ce tableau qui possède ainsi la portée géographique la plus étendue de ceux renfermant des données sur la natalité. Les principaux pays et territoires, même ceux pour lesquels des données récentes font défaut, figurent dans le tableau et des chiffres y sont fournis sur une partie seulement de la population lorsqu'on n'a pu se procurer de statistiques pour l'ensemble du pays.

Toutefois, la portée géographique de ce tableau a été quelque peu réduite par la nécessité d'y publier non seulement des nombres absolus mais aussi des taux. En effet, le calcul des taux limite les inclusions des nombres de naissances à ceux d'une certaine importance (généralement 15 ou plus) et aux pays pour lesquels on dispose de données sur le chiffre correspondant de la population.

Calcul des taux: Les taux bruts de natalité contenus dans le tableau 19 représentent le nombre de naissances vivantes pour 1 000 personnes dans la population estimée au milieu de l'année, ou dans un petit nombre de cas, à la date du recensement ou à une autre époque de l'année. Ces moyennes quinquennales constituent donc la somme des naissances vivantes pendant la période considérée pour 1 000 personnes dans la somme des populations estimées au milieu de l'année pendant la même période.

En général, les chiffres de population sur lesquels reposent les taux sont les chiffres officiels présentés dans le tableau 3. Il convient donc de se reporter à ce tableau si l'on désire savoir à quelle catégorie du code appartient la population qui constitue le dénominateur des taux.

Insuffisances des données: Outre les nombres de naissances vivantes déclarées dans 172 pays et territoires le tableau 19 renferme un procédé d'évaluation de la qualité des données sous la forme des lettres et signes conventionnels "C", "U" ou "...", figurant dans la première colonne du tableau. Des explications détaillées sur les éléments de ce code et sa signification ont été fournies précédemment à la page 77. Lorsque les pays ont communiqué des évaluations précises, la mesure dans laquelle l'enregistrement des naissances est complet a été exprimée au moyen de pourcentages.

En utilisant les statistiques de ce tableau, il conviendra également de tenir compte des conséquences de l'exploitation des données d'après la date de l'enregistrement plutôt que d'après celle de l'événement. Les pays dans lesquels les statistiques sont établies d'après le date de l'enregistrement sont indiqués par une croix (†) dans le tableau. Quand le délai se prolonge entre l'événement et son enregistrement à l'état civil, c'est-à-dire lorsqu'une forte proportion des naissances vivantes fait l'objet de "déclarations tardives" comme c'est le cas dans certaines régions de l'Amérique du Sud, d'Asie et d'Afrique, l'établissement des statistiques d'après la date de l'enregistrement donne une idée très inexacte, si ce n'est complètement fausse, des tendances de la natalité.

Cette distinction est particulièrement importante lorsqu'on interprète la signification du code. Les statistiques établies d'après la date de l'enregistrement peuvent souvent avoir des valeurs et des taux tout à fait admissibles bien que les données de base soient incomplètes. En l'occurrence, il est très possible que le nombre de naissances ayant échappé à l'enregistrement au cours d'une année considérée soit compensé par l'inclusion dans les statistiques de naissances survenues l'année précédente et les chiffres qui en résultent peuvent, de ce fait, induire en erreur.

Abstraction faite de leurs insuffisances, les taux bruts de natalité fournissent une mesure de l'augmentation brute de la population attribuable aux naissances. Mais, comme la composition par âge et par sexe de la population varie d'un pays à l'autre, les taux bruts ne correspondent pas très exactement aux différences dans le nombre des naissances parmi la population en âge de procréer. Ils donnent simplement une idée générale des tendances dans le temps et des écarts existant entre les niveaux de natalité des divers pays.

Tableau 20

Le tableau 20 est consacré aux naissances vivantes selon l'âge de la mère. Les groupes d'âge représentés sont "moins de 15 ans", quinquennaux jusqu'à 49 ans, "50 ans et plus" et "âge inconnu". Comme dans les autres tableaux où il existe une classification par âge, l'âge est calculé au dernier anniversaire ou en années révolues.

Portée: On a publié dans le tableau les dernières données qu'on a pu se procurer sur ce sujet, nouvelles ou rectifiées, pour 88 pays et territoires même dans le cas où elles se rapportent à des années assez anciennes. Ce tableau peut donc être considéré comme un index des pays qui exploitent les naissances vivantes d'après l'âge de la mère et fournir également des indications précieuses sur le degré d'actualité de ces statistiques.

Insuffisances des données: Le code permettant d'évaluer dans quelle mesure les données sont complètes qui a été décrit dans le paragraphe général consacré aux statistiques de l'état civil et qui figure dans le tableau 19, s'applique également aux données de ce tableau. La comparabilité de ces données est également affectée par des différences dans la méthode d'exploitation des données, c'est-à-dire, d'après la date de l'événement ou celle de l'enregistrement. Une croix (†) dans la colonne de gauche du tableau indique les pays qui établissent leurs statistiques d'après la date de l'enregistrement et les conséquences de ce procédé ont déjà été exposées dans le paragraphe s'y rapportant.

Comme ces statistiques sont classées par âge, elles sont affectées des mêmes limitations en ce qui concerne les déclarations d'âge que celles déjà mentionnées à propos de la répartition de la population selon l'âge et le sexe. Si aucun nombre ne figure dans la colonne réservée aux âges "inconnus", cela ne signifie pas nécessairement que la transmission et l'exploitation des données par âge aient été tout à fait exactes. C'est souvent une indication que l'on a attribué un âge aux "inconnus" avant l'exploitation des données ou qu'ils ont été répartis proportionnellement entre les différents groupes après cette opération.

Il importe de garder à l'esprit également lorsqu'on utilisera ces données que certains pays calculent l'âge de la mère à la naissance de l'enfant (ou à l'enregistrement de cette naissance), c'est-à-dire à partir de la date exacte de l'événement (jour, mois et année) alors que d'autres ne prennent pour base que l'année seulement. On a indiqué en note ces différences de méthode lorsqu'on en a eu connaissance.

Le défaut de comparabilité, à la fois entre les données de ce tableau se rapportant à des pays différents et ces données et celles du tableau 19, est dû à un certain nombre de causes. Quelquefois, les données selon l'âge se rapportent aux accouchements plutôt qu'aux naissances vivantes; en outre, dans certains cas les accouchements en question correspondent à ceux d'enfants nés vivants seulement tandis que, dans d'autres, ils concernent les accouchements soit d'enfants nés vivants, soit de mort-nés. Certains pays ne répartissent que les naissances légitimes par âge de la mère alors que les nombres relatifs aux naissances vivantes du tableau 19 se rapportent à toutes les naissances, légitimes ou non. Dans la plupart des cas cette restriction est peu importante, mais lorsque les naissances illégitimes sont relativement nombreuses, on ne peut considérer les données limitées aux seules naissances légitimes comme significatives. De même, dans d'autres pays, la répartition des naissances vivantes par âge de la mère ne porte que sur les enfants nés vivants qui ne sont pas décédés avant l'enregistrement de leur naissance tandis que les nombres du tableau 19 comprennent ceux qui sont décédés avant l'enregistrement.

Tableau 21

Le tableau 21 présente les taux de natalité selon l'âge de la mère de 61 pays et territoires pour la dernière année au sujet de laquelle on dispose de ces statistiques. Les taux sont indiqués pour les "moins de 15 ans", par groupes d'âge quinquennaux de 15 à 45 ans et pour les mères de "45 ans et plus". Les groupes de "45 à 49 ans" et de "50 ans et plus" qui figurent séparément dans le tableau 20 ont été réunis en un seul ici par suite de la faible importance de certains nombres dans les deux catégories.

Portée: La portée géographique de ce tableau est beaucoup plus limitée que celle du tableau 20 à cause du manque de chiffres de population correspondants par âge et par sexe. On dispose de statistiques des naissances vivantes exploitées d'après l'âge de la mère conformément aux recommandations des Nations Unies[9] pour 88 pays et territoires et pour diverses périodes, dans le tableau 20. Des données sur la population féminine par âge correspondante n'étaient disponibles que pour 61 de ces pays. Elles proviennent de recensements ou constituent des estimations établies à partir de résultats de recensements ajustés au moyen des statistiques de l'état civil et des migrations. On n'a pas utilisé de répartitions obtenues en appliquant le pourcentage de la population dans chaque groupe d'âge au moment du recensement.

La portée géographique du tableau est également réduite par le fait que l'on n'y a pas publié de taux lorsque les naissances pour lesquelles l'âge de la mère n'est pas connu dépassaient dix pour cent de l'ensemble des naissances vivantes. De même, le taux n'a pas été calculé lorsque le nombre total des naissances vivantes était inférieur à 50.

Calcul des taux: Pour calculer ces taux on s'est servi des nombres de naissances vivantes publiés dans le tableau 20 et de chiffres de la population féminine correspondante classée par âge fournies par le recensement ou des estimations. Les chiffres de population à partir desquels les taux ont été calculés sont ceux qui ont été publiés dans le tableau 10, qui correspond à ce tableau, dans les éditions précédentes de l'*Annuaire.*

En calculant les taux selon l'âge, les naissances de mères d'âge inconnu ont été réparties proportionnellement parmi les naissances de mères d'âge connu.[10] Ainsi, à l'exception du premier et du dernier groupe d'âge, les taux représentent le nombre de naissances vivantes attribuables aux mères classées dans un groupe d'âge spécifié (nombre rectifié par la répartition du groupe d'âge inconnu) pour 1 000 femmes du même groupe d'âge.

Comme une infime fraction de l'ensemble des naissances se produit chez les femmes de moins de 10 ans et au-dessus de 50 ans, les naissances de mères de moins de 15 ans et de 45 ans et plus sont rapportées respectivement à la population féminine de 10 à 14 ans et de 45 à 49 ans. Le nombre de femmes d'âge inconnu n'entre pas en ligne de compte puisque le taux de natalité pour "tous les âges" indiqué dans ce tableau est en réalité un taux qui n'intéresse que certains âges et qui a été établi d'après le nombre d'enfants auxquels ont donné naissance les femmes de tous âges d'une part, et la population féminine entre 10 et 49 ans d'autre part. Pour la même raison, le taux pour "tous les âges" ne peut correspondre au taux brut global du tableau 19 mais, dans le cas où les statistiques procèdent de la même définition, il concordera avec le taux par âge relatif à l'ensemble des naissances du tableau 23.

Insuffisances des données: Les taux de ce tableau sont soumis aux mêmes restrictions que celles qui affectent les nombres du tableau 20. Leur comparabilité est également compromise par la mesure dans laquelle les données de base sont complètes, par la méthode utilisée pour le calcul de l'âge et par l'exploitation des données suivant la date de l'événement ou celle de l'enregistrement. On peut se rendre compte des conséquences de l'inclusion des déclarations tardives dans les statistiques des naissances selon l'âge de la mère en examinant les taux pour le Chili, le Pérou et Taiwan par exemple. En l'occurrence et dans d'autres pays aussi, l'importance des taux relatifs aux âges de 45 ans et plus peut très bien s'expliquer par l'inscription de l'âge de la mère lors de l'enregistrement de la naissance plutôt qu'au moment même de la naissance de l'enfant.

Tableau 22

Ce tableau renferme des statistiques des naissances vivantes selon le rang de naissance pour les dernières années au sujet desquelles on dispose de données de cet ordre au Bureau de statistique. Les naissances vivantes sont indiquées séparément de la première à la neuvième; à partir de la dixième, il n'y a plus qu'un seul groupe avec, en outre, une catégorie "inconnu" (rang de naissance inconnu).

Portée: Comme la classification des naissances selon le rang, qui est cependant classique, constitue une opération plus compliquée que celle selon l'âge de la mère, il était à prévoir qu'un plus petit nombre de pays seraient en mesure de présenter des données sous cette forme. Ensemble, 64 pays et teritoires figurent dans le tableau, chiffre notablement inférieur à celui du tableau 20 (naissances vivantes selon l'âge de la mère).

Insuffisances des données: Comme on l'a déjà souligné au sujet du tableau 20, la comparabilité des données est limitée par des différences dans l'attitude adoptée dans chaque pays en ce qui concerne les naissances illégitimes, les naissances multiples et les mort-nés. Cependant, le facteur qui compromet le plus cette comparabilité est la méthode utilisée pour établir le rang de naissance.

La recommandation internationale insérée à ce sujet dans les *Principes directeurs d'un système de statistiques de l'état civil*[11] suggère que les naissances vivantes soient classées d'après l'âge de la mère et le rang de naissance parmi les enfants nés vivants, et que ce rang de naissance soit défini à cette fin comme "l'ordre numérique de l'enfant (dont le bulletin statistique de l'état civil relatif à la naissance est exploité), par rapport à tous les enfants antérieurement nés vivants de la mère, qu'il s'agisse d'enfants légitimes ou non". Beaucoup de pays suivent cette recommandation et classent les naissances vivantes d'après le nombre des naissances vivantes antérieures. Cette procédure n'est cependant pas universellement suivie. Quelques pays calculent le "rang de naissance" à partir du "nombre de naissances vivantes antérieures plus les mort-nés"; d'autres utilisent comme base de calcul le nombre d'accouchements comprenant ou ne comprenant pas ceux de mort-nés; dans certains pays, pour déterminer le rang de naissance on ne tient compte que des naissances

[9] *Principes directeurs d'un système de statistiques de l'état civil,* op.cit., Principe 410e(5).

[10] Cette méthode de répartition des âges inconnus peut être critiquée dans une certaine mesure parce que l'on sait que la répartition selon l'âge de la mère pour les naissances légitimes diffère de celle pour les naissances illégitimes et que la proportion des "âges inconnus" est beaucoup plus forte dans le cas des naissances illégitimes. Il conviendrait de tenir compte de ce fait pour obtenir une répartition plus précise des naissances attribuables aux mères d'âge inconnu, mais il se présente alors une autre difficulté qui réside dans le fait que les naissances selon l'âge de la mère ne sont pas régulièrement classées en "légitimes" et "illégitimes."

[11] *Op cit.* Principe 410e(5).

vivantes légitimes antérieures ou des mort-nés, ou des deux à la fois, et, parfois même, que des naissances vivantes légitimes survenues pendant la durée du mariage en cours de la mère. Chaque fois que l'on a eu connaissance de ces limitations on les a signalées en note.

Comme pour les autres tableaux contenant des statistiques de la natalité, on peut avoir une idée de la mesure dans laquelle les données selon le rang de naissance sont complètes en se reportant au code faisant partie du tableau 19. Il convient d'admettre toutefois que, à moins que les données soient tout à fait fragmentaires, la courbe de répartition des naissances selon le rang dans un pays donné peut encore fournir des indications utiles.

En général, les renseignements sur le rang de naissance font défaut dans les pays où l'intervalle qui s'écoule entre la naissance et son enregistrement est important. Par suite, les conséquences de l'exploitation d'après la date de l'enregistrement perdent une grande partie de leur valeur dans ce tableau.

Tableau 23

Le tableau 23 présente des taux de natalité selon le rang de naissance obtenus à partir des données du tableau 22. Par définition, les taux se rapportent aux naissances vivantes et le rang de naissance a été calculé d'après le nombre d'enfants déjà nés vivants de la mère.

Portée: Les dernières données de 43 pays et territoires figurent dans le tableau 23. Ce tableau comprend moins de pays que le tableau 22 par suite de la nécessité de disposer à la fois du numérateur (naissances) et du dénominateur (population par âge et par sexe) des taux pour pouvoir les calculer. En outre, on n'a pas calculé de taux pour un certain nombre de territoires à cause de la faiblesse des chiffres des naissances après que celles-ci aient été réparties entre 10 groupes ou plus.

Calcul des taux: Les taux représentent le nombre de naissances vivantes de chaque rang pour 1 000 femmes de 10 à 49 ans. Ce ne sont donc pas des taux spécifiques puisqu'ils n'ont pas été calculés d'après des promotions de femmes en fonction du rang de naissance de leurs enfants nés vivants. Les naissances vivantes de rang inconnu n'ont pas été réparties entre celles de rang connu mais elles constituent la composante du taux. En conséquence la somme des taux pour chaque rang de naissance et celles de rang inconnu constitue le taux global pour toutes les naissances vivantes de mères de 10 à 49 ans. Sauf dans le cas où les statistiques procèdent de définitions différentes, ce taux global correspond également à celui "tous âges" du tableau 21.

Comme un grand nombre des séries présentées se rapportent aux naissances vivantes légitimes seulement, il aurait été plus indiqué de calculer les taux à partir de la population féminine mariée de 10 à 49 ans. Cependant, la nécessité de disposer alors d'une population de base répartie selon l'âge, le sexe et l'état matrimonial eut notablement réduit la portée géographique du tableau.

Insuffisances des données: Les mêmes facteurs qui compromettent la comparabilité des nombres absolus de naissances du tableau 22, ont une influence identique sur les taux.

Quelques pays n'exploitent que les naissances vivantes légitimes, d'autres les accouchements d'enfants nés vivants ou encore ceux d'enfants nés vivants ou mort-nés. Comme dans le tableau relatif aux nombres absolus, le principal obstacle à la comparabilité provient cependant des variations dans le calcul du rang de naissance déjà exposées à propos du tableau 22.

En dépit de ces restrictions, des données de cette nature permettent d'étudier certains aspects de la fécondité en relation étroite avec la fréquence des mariages ou la dimension de la famille, les variations en cause se reflétant dans l'évolution de la répartition des naissances entre les divers rangs.

2. Statistiques de la mortinatalité (morts foetales tardives)

Comme les statistiques des naissances vivantes et des décès, les statistiques des "mort-nés" publiées dans le tableau 24 exclusivement, se rapportent à la population présente à l'intérieur des frontières actuelles des pays considérés, et consistent en données nouvelles et rectifiées reçues au Bureau de statistique.

Mesure dans laquelle les données sont complètes: L'enregistrement des mort-nés est encore plus incomplet que celui de n'importe quel autre fait d'état civil. Les régions connues pour avoir un système d'enregistrement imparfait ou irrégulier sont indiquées dans le tableau 19, mais il est certain que de nombreux pays qui possèdent des statistiques convenables des naissances vivantes et des décès peuvent n'avoir que des statistiques tout à fait insuffisantes des mort-nés. Il est évident que, même dans le cadre d'un système d'enregistrement particulièrement efficace, une proportion beaucoup plus grande de mort-nés que de naissances vivantes ou de décès échappe à l'enregistrement.

Toutefois, il est difficile de mesurer ou d'évaluer le nombre exact de ceux qui ne sont pas enregistrés. Par suite, aucun renseignement précis sur l'étendue de la portée de ces statistiques n'a pu être obtenu, comme c'est le cas dans d'autres tableaux, et de ce fait on ne trouvera pas de code permettant d'évaluer la qualité des données dans ce tableau. Ce que l'on peut affirmer tout au plus, c'est que dans les pays où la plupart des accouchements ont lieu avec l'assistance d'un médecin ou d'une sage-femme diplomée, l'enregistrement des statistiques de la mortinatalité est plus satisfaisant qu'ailleurs.

Définitions: Ainsi qu'on l'a indiqué précédemment (voir page 81), la comparabilité des statistiques de la mortinatalité est fortement compromise par des différences de définition aussi bien que par des variations dans le degré d'enregistrement.

Comme on l'a déjà mentionné, certains pays classent les enfants nés vivants décédés peu après leur naissance ("dans les vingt-quatre heures", "immédiatement après", "avant l'enregistrement de l'événement comme naissance vivante", etc.) avec les mort-nés. Afin de les distinguer des autres, on pourrait désigner ces mort-nés sous le terme de "faux mort-nés". Les pays, relativement peu nombreux, connus pour suivre cette pratique sont notés dans les tableaux.

On entend généralement par mort-né la naissance d'un foetus viable, décédé à la naissance ou, en d'autres termes, une mort foetale survenant assez tard au cours de la grossesse pour qu'il y ait eu jusque là une assez forte probabilité de survie.

Les critères de viabilité reposent d'ordinaire sur la durée de la grossesse calculée en jours, semaines ou mois.

Les périodes minima de gestation varient largement, allant, d'après les renseignements qu'on a pu recueillir, de 3 à 7 mois. L'intervalle le plus fréquemment mentionné comme minimum est de 28 semaines. Quelques pays exigent en outre que le fœtus ait une longueur minimum, celle-ci variant entre 30 et 35 centimètres. Dans un certain nombre de cas la seule condition requise est que le fœtus soit viable et puisse être reconnu comme un "être humain". En outre, quelques pays ne tiennent pas compte de la viabilité et classent tous les fœtus que l'on déclare nés sans vie avec les mort-nés.

Quoique des renseignements complets n'aient pu être obtenus sur la façon dont les mort-nés sont définis dans chaque région et pour toutes les années pour lesquelles des statistiques de la mortinatalité sont présentées dans ce volume, certaines précisions disponibles sur les pratiques en vigueur dans la plupart des pays considérés sont résumées ci-après. Il convient de noter que cette classification est fondée sur le critère de "viabilité" seulement, c'est-à-dire qu'elle concerne les pays qui font une distinction entre les "mort-nés" et les "avortements". Les autres critères se trouvant à la base de la plupart des définitions du "mort-né" n'entrent pas en ligne de compte, à savoir, les "signes de vie" qui différencient les "mort-nés" des "naissances vivantes".

I. *Pays exigeant une période minimum de gestation:*

A. 28 semaines au moins

Bolivie
Brésil
Canada
Ceylan
Chili, depuis 1944
Costa-Rica
Côte de l'Or
Danemark
Equateur, depuis 1945
Fédération de Malaisie
Guinée Britannique
Honduras (ou 7 mois)
Honduras Britannique
Inde (quelques états)
Islande (6 mois ½ du calendrier)
Norvège
Nouvelle-Zélande
Paraguay
Pays-Bas, depuis 1950[12]
Pérou
Pologne (7 mois)
République Dominicaine
Roumanie (6 mois ½)
Royaume-Uni:
Angleterre et Pays de Galles
Ecosse
Salvador (ou 7 mois)
Thaïlande
Trinité et Tobago
Yougoslavie (ou 7 mois)
Zone du canal

B. 26 semaines au moins

Belgique (plus de 180 jours)
Bulgarie (6 mois)
Colombie (6 mois)
Egypte (6 mois)
Finlande (6 mois)
France (6 mois)
Italie (6 mois)
Ile Maurice (6 mois)
Liechtenstein (6 mois)
Luxembourg (6 mois)
Pays-Bas, avant 1950
Venezuela (6 mois)

C. 20 semaines au moins (ou 5 mois, suivant l'indication)

Etats-Unis ("qu'il ait atteint la vingtième semaine" pour l'établissement des statistiques nationales)
Panama (5 mois)
Philippines (5 mois)

D. 3 mois au moins

Japon (plus de 3 mois)

[12] Les données publiées dans cet *Annuaire* sont classées selon la définition en vigueur avant 1950:26 semaines.

II. *Pays exigeant seulement un poids ou une longueur minimum:*

Allemagne: République Fédérale (35 cm)
Autriche (35 cm)
Suède (35 cm)
Suisse (plus de 30 cm)
Tchécoslovaquie (plus de 400 g.)

III. *Pays exigeant seulement que le fœtus soit viable ou qu'il puisse être reconnu comme un "être humain":*

Cuba (apparence)
Mexique (viable)
Portugal (apparence)
Rhodésie du Sud (apparence)
Sud-Ouest Africain (viable)
Union Sud-Africaine (viable)

IV. *Pays sans critère de viabilité:*

Angola
Grèce
Espagne
Iles du Cap-Vert
Iles Anglo-Normandes
Inde (quelques Etats)
Inde Portugaise
Maroc
Mozambique
Saint-Thomas et Ile du Prince
Zanzibar et Pemba

Lorsque la période de gestation est exprimée en mois, il s'agit de mois lunaires et quelquefois de mois du calendrier de l'année civile. Il n'a pas été possible de déterminer exactement pour chaque cas quelle unité de calcul a été employée, mais dans la classification ci-dessus on suppose que les pays exigeant sept mois se réfèrent aux mois lunaires et par conséquent à vingt-huit semaines tandis que ceux pour lesquels six mois sont indiqués se basent sur des mois du calendrier de l'année civile équivalant d'ordinaire à 180 jours ou vingt-six semaines.

A cause de la diversité des définitions à partir desquelles sont établies les statistiques de la mortinatalité dans les différents pays et de la nécessité de posséder des données sur l'ensemble des pertes fœtales qu'il est impossible d'obtenir des définitions utilisées pour les mort-nés, le Comité d'experts des statistiques sanitaires de l'Organisation Mondiale de la Santé a étudié cette question lors de sa deuxième session en 1950 et a présenté certaines recommandations[13] pour examen par l'Assemblée Mondiale de la Santé. En premier lieu le Comité a proposé d'une part de définir le terme de "mort fœtale" plutôt que celui de "mort-né" et d'autre part il a suggéré que la définition de la mort fœtale soit l'inverse de celle de la naissance vivante. La définition de la mort fœtale qui a été finalement adoptée par l'Assemblée Générale de la Santé, puis par le Conseil Economique et Social de l'Organisation des Nations Unies lorsqu'il a approuvé les *Principes directeurs d'un système de statistiques de l'état civil*[14] est la suivante:

> *On entend par "mort fœtale" le décès d'un produit de conception, lorsque ce décès est survenu avant l'expulsion ou l'extraction complète du corps de la mère, indépendamment de la durée de la gestation; le décès est indiqué par le fait qu'après cette séparation, le fœtus ne respire ni ne manifeste aucun autre signe de vie, tel que battement du cœur, pulsation du cordon ombilical ou contraction effective d'un muscle soumis à l'action de la volonté.*

[13] Organisation Mondiale de la Santé, Comité d'experts des statistiques sanitaires, Rapport sur la deuxième session, *Série des Rapports techniques No. 25*, Genève, octobre 1950.

[14] *Op. cit.*, Principe 202.

Le Comité a présenté plusieurs autres propositions qui n'ont pas été adoptées par l'Assemblée mais qui ont été communiquées pour étude aux différents pays. Parmi ces recommandations on peut citer les suivantes:

. . .

b) L'établissement de tableaux statistiques de toutes les morts fœtales est un objectif souhaitable qu'il y aurait lieu d'atteindre le plus rapidement possible.

c) Tous les pays devraient au moins procéder à l'enregistrement et à l'établissement de tableaux statistiques de toutes les morts fœtales survenues après la vingt-huitième semaine complète de gestation.

d) Les tableaux statistiques des morts fœtales devraient comprendre les groupes suivants:

Moins de 20 semaines complètes de gestation	Groupe I
20 semaines complètes de gestation mais moins de 28 semaines	Groupe II
28 semaines complètes de gestation et au-delà	Groupe III
Durée de gestation ne pouvant être classée dans les groupes I, II et III	Groupe IV

(La durée de la gestation se compte à partir du début de la dernière menstruation)

Les morts fœtales du groupe pourraient également être désignées par l'expression "mort fœtales précoces".

Les morts fœtales du groupe II pourraient également être désignées par l'expression "mort fœtales intermédiaires".

Les morts fœtales du groupe III pourraient également être désignées par l'expression "morts fœtales tardives".

. . .

g) Le terme "mortinatalité", lorsqu'il est utilisé dans les statistiques d'un pays quelconque, devrait référer au groupe III (morts fœtales tardives).

Il a été admis que le terme "mortinatalité" continuerait nécessairement à être utilisé par de nombreux pays pendant quelque temps encore.

. . .

Jusqu'à présent, aucun pays n'a transmis de statistiques de toutes les morts fœtales, bien que l'on sache que 14 pays au moins ont adopté la nouvelle définition, dans son ensemble ou avec de légères modifications. Tant que les données communiquées par les pays ne répondront pas à la nouvelle définition et ne comprendront pas toutes les morts fœtales, le tableau correspondant de l'*Annuaire démographique* continuera à présenter des "morts fœtales tardives" ou "mort-nés".

Tableau 24

Le tableau 24 retrace l'évolution à long terme de la mortinatalité et indique les nombres de mort-nés (morts fœtales tardives) ainsi que les taux de mortinatalité pour la période de 1946 à 1954.

Portée: Ce tableau comprend 129 pays et territoires et sa portée géographique n'a été limitée que par le principe qu'on s'est fixé de ne pas publier de taux pour les territoires ayant un nombre de mort-nés inférieur à 15. De ce fait, quelques territoires ne sont pas représentés ici étant donné la faiblesse des nombres en cause.

L'obligation dans laquelle on est de faire correspondre le numérateur et le dénominateur du taux est beaucoup moins difficile à satisfaire dans ce cas parce que les taux sont calculés à partir des naissances vivantes et non d'après des estimations de population. En effet, lorsqu'on dispose de statistiques des mort-nés pour un certain pays il y a de fortes chances pour que le nombre de naissances vivantes soit également connu.

Calcul des taux: Les taux publiés dans le tableau représentent le nombre de mort-nés déclarés pour 1 000 naissances vivantes pendant la même période, plutôt que pour un total de 1 000 naissances vivantes et mort-nés. Cette méthode de calcul a été adoptée par suite du caractère variable du degré d'enregistrement des mort-nés par rapport à la stabilité relative des déclarations de naissances d'une année à l'autre.

Tous les taux ont été calculés au Bureau de statistique des Nations Unies à partir des nombres de naissances vivantes, du tableau 19, à l'exception toutefois de Ceylan pour qui on a indiqué les taux de mortinatalité officiels de la "Proclaimed area" en l'absence de statistique des naissances vivantes.

Insuffisances des données: Toutes les restrictions énumérées à la page 85 sont applicables aux données de ce tableau quoiqu'il soit quelquefois difficile de déterminer à partir des seuls taux les lacunes de l'enregistrement des mort-nés. L'enregistrement des mort-nés est fragmentaire dans la plupart des pays; mais lorsque cet enregistrement et celui des naissances sont tous deux incomplets, les taux qui en résultent peuvent paraître acceptables. En fait, dans les pays où l'enregistrement des naissances vivantes est le pire, il arrive que les taux soient plus élevés si bien que le caractère incomplet des données de base passe inaperçu. Cette influence relative du degré d'enregistrement des naissances vivantes ne doit pas être négligée si l'on veut se faire une idée exacte des taux de mortinatalité en cause.

En plus du rôle joué par le degré d'enregistrement des naissances vivantes, les taux de mortinatalité peuvent être sérieusement affectées par des différences dans la méthode d'exploitation des données. Cela n'a aucune influence sur les nombres de mort-nés, mais, comme on vient de l'indiquer, les taux de mortinatalité sont calculés à partir des naissances vivantes, et le résultat peut être tout différent si elles ont été exploitées d'après la date de l'enregistrement. Lorsque le nombre annuel de naissances vivantes enregistrées et communiquées varie fortement par suite de l'introduction de nouvelles dispositions législatives ou de l'obligation de posséder une preuve de la naissance que doit remplir une partie importante de la population, les taux de mortinatalité varient également mais en sens contraire. En conséquence, il y a lieu d'utiliser avec une certaine prudence les données des pays où les statistiques se rapportent à la date de l'enregistrement à moins que l'on sache que le nombre de naissances vivantes d'après la date de l'enregistrement est très peu différent de celui obtenu selon la date de l'événement.

3. Statistiques de la mortalité

Les tableaux 25 à 29 renferment des statistiques de la

mortalité. Comme pour les naissances ces statistiques, qui comprennent des données nouvelles et rectifiées, ne présentent pas toutes le même degré d'exactitude ni d'enregistrement.

Les données publiées correspondent aux décès survenus parmi la population présente à l'intérieur des frontières actuelles du pays. Ces statistiques comprennent donc, à priori et sauf indication contraire, les décès qui se sont produits parmi les tribus nomades et les aborigènes, les forces armées étrangères ou nationales, les personnes déplacées et les réfugiés de guerre, ainsi que parmi les étrangers qui résident dans le pays au moment du décès. Elles n'englobent pas normalement les décès survenus dans les forces armées nationales ou chez les ressortissants civils nationaux qui se trouvent en dehors du territoire. Il y a lieu de souligner que l'absence de notes formulant des réserves à cet égard n'implique pas nécessairement que les données correspondent à la définition-type. Cependant, des renseignements sont fournis dans presque tous les cas où des différences importantes sont en jeu.

Les chiffres ne comprennent pas les mort-nés à l'exception d'un petit nombre de cas indiqués dans les tableaux où l'on a pu supposer à juste titre que le nombre de mort-nés en cause était trop faible pour fausser les statistiques.

Les décès d'enfants nés vivants qui sont morts avant l'enregistrement de leur naissance ou dans les premières vingt-quatre heures ne sont pas compris dans les totaux de certains pays par suite de l'adoption de définitions des mort-nés et naissances vivantes ne s'y prêtant pas, comme on l'a déjà expliqué. Il s'agit là d'une exclusion importante puisque les décès qui surviennent dans un délai maximum de trois jours après la naissance risquent de ne pas être enregistrés, délai pendant lequel la mortalité a tendance à être élevée.

Du fait que les lacunes dans l'enregistrement des décès sont plus difficiles à déceler ou à évaluer que celles qui existent dans l'enregistrement des naissances, les colonnes réservées au code qui donne un aperçu de la qualité des statistiques dans les tableaux de mortalité à tous âges et de mortalité infantile (tableaux 25 et 28) contiennent plus "d'inconnues" (. . .) que celles accompagnant les tableaux relatifs aux statistiques des naissances. On pense généralement que l'enregistrement des décès est plus complet que celui des naissances, mais cela peut ne pas être le cas partout. En fait, des exemples répétés démontrent que, dans plusieurs territoires et dans certaines conditions, les naissances peuvent être mieux enregistrées que les décès.

Les tableaux ont été soigneusement vérifiés et la plupart des disparités dans les chiffres ou dans les taux sont expliquées à l'aide de notes ou justifiées. Les différences qui n'ont pu être interprétées sont également indiquées en note, sauf quand elles sont très faibles et ne mettent en cause qu'un décès ou deux. Parmi les divergences qui n'ont pas été indiquées dans les tableaux relatifs aux taux sont les écarts provenant de l'emploi de chiffres de population à différentes époques de l'année (par exemple, la population au milieu de l'année pour les taux bruts et la population à la date du recensement pour les taux selon l'âge). Ces variations sont très faibles, atteignant rarement une décimale.

Tableau 25

Ce tableau, présente les nombres annuels de décès pour les années 1946 à 1954 et les taux bruts de mortalité pour 1920 à 1934 et 1946 à 1954 (sous la forme de moyennes pondérées quinquennales de 1920 à 1934 et de taux annuels de 1946 à 1954).

Sauf indication contraire, les données se rapportent aux décès survenus à l'intérieur des frontières actuelles des pays considérés et parmi la population présente. Il convient de remarquer toutefois que, dans ce tableau, se trouvent un certain nombre de notes indiquant pour les années de guerre la répartition des décès dans les forces armées, nationales aussi bien qu'étrangères, et des pertes de guerre chez les civils, chaque fois qu'on en a eu connaissance. On a procédé de la sorte, même si la répartition en cause constitue une exception au critère de la population présente par suite de la confusion qui entoure ce problème. La connaissance de la répartition exacte des décès parmi les forces armées lorsque leur inclusion ou exclusion est susceptible de provoquer dans les taux bruts de mortalité des variations allant jusqu'à une décimale, est en effet particulièrement souhaitable.

Portée: 171 pays et territoires figurent dans le tableau 25. On n'a pas publié de statistiques pour les pays dont les nombres absolus étaient inférieurs à 15. Néanmoins, la portée géographique représentée par ces pays est quelque peu trompeuse car, dans plusieurs cas, les statistiques reproduites se rapportent seulement à la partie non-indigène de la population. De ce fait, les données relatives à certaines régions, pour l'Afrique en particulier, ont une très faible valeur.

Calcul des taux: Les taux bruts annuels de mortalité qui figurent dans ce tableau représentent le nombre de décès signalés pendant l'année civile pour 1 000 personnes dans la population présente au milieu de l'année ou, quelquefois, à la date du recensement ou à une autre période de l'année. Les taux pour 1920-24, 1925-29 et 1930-34 sont des moyennes quinquennales pondérées.

En général, les chiffres de population à partir desquels on a calculé les taux sont ceux publiés dans le tableau 3. De ce fait, en l'absence d'un chiffre officiel de population dans le tableau 3, on n'a pas indiqué de taux dans ce tableau, même si le nombre de décès pour l'année en question y figure. Il y a quelques exceptions à ce principe lorsque les taux se rapportent à une partie seulement de la population pour laquelle une estimation est publiée au tableau 3. Mais, d'une manière générale il suffit de se reporter au tableau 3 pour savoir ce que représente la population qui constitue le dénominateur des taux publiés dans le tableau 25.

Lorsque les taux reposent sur des données incomplètes, soit du point de vue géographique soit du point de vue de la population, ou lorsqu'il n'y a pas de correspondance exacte entre le numérateur et le dénominateur, ces détails ont également été signalés en note chaque fois qu'il a été possible de le faire. On n'a pas indiqué de taux dans les cas où la portée des statistiques de la mortalité diffère considérablement de celle des statistiques de la population.

Insuffisances des données: Le code permettant d'évaluer la qualité des données, dont il a déjà été question à la page 77, figure dans ce tableau mais il s'applique également

aux tableaux 26 à 29. Il y a lieu de tenir compte des indications de ce code en utilisant les données de ce tableau.

De même, et bien que ce facteur ait beaucoup plus d'importance en ce qui concerne les naissances vivantes, on remarquera que, selon les pays, les statistiques sont établies d'après la date de l'événement ou d'après celle de son enregistrement; dans ce dernier cas les données en cause sont indiquées par une croix (†) dans le tableau.

Les taux bruts de mortalité mesurent la diminution totale de la population d'un territoire causée par la mort. Comme ils ne reflètent aucunement les différences de structure dans la composition par âge et par sexe des populations et du fait que la mortalité est plus grande aux premiers âges et aux âges avancés, on ne peut dire que les taux bruts sont exactement comparables d'un pays à l'autre. Cependant, ils donnent une idée exacte des écarts bruts qui existent entre les différents niveaux de mortalité et indiquent les territoires dans lesquels existent des conditions concourant à une mortalité exagérée.

Tableau 26

Les dernières statistiques disponibles des décès répartis par âge et par sexe, sont publiées dans le tableau 26. Comme dans tous les autres tableaux où se trouve cette caractéristique l' "âge" est exprimé en unités de temps écoulé, c'est-à-dire, en années révolues. La classification des décès par âge est la suivante: "moins d'un an", "un à quatre ans", groupes quinquennaux jusqu'à 84 ans, "85 ans et plus" et un groupe d'âge "inconnu". Lorsque les statistiques présentées ne correspondent pas exactement aux en-têtes, des en-têtes secondaires ont été insérés dans le tableau et l'étendue des groupes d'âge rectifiés a été indiquée par des traits horizontaux dans les colonnes. *Portée:* 135 pays et territoires figurent dans le tableau, c'est-à-dire, tous ceux qui ont communiqué des données, à l'exception de quelques uns d'entre eux pour lesquels les statistiques sont discutables ou dont le nombre total de décès à "tous âges" était inférieur à 50. Ainsi il suffit de se reporter à ce tableau pour connaître les pays qui classent leurs décès par âge et par sexe et dont les statistiques sont acceptables.

Insuffisances des données: Comme ces données sont classées par âge, elles sont sujettes aux inexactitudes des déclarations d'âge dont il a été question dans le paragraphe relatif à l'état de la population (voir page 66). Lorsqu'aucun nombre ne figure dans le groupe d'âge "inconnu" il ne faut pas en déduire automatiquement que les déclarations d'âge sont complètes; cela peut être également une indication qu'on a attribué un âge aux personnes d'âge "inconnu" avant l'exploitation des données ou que le groupe d'âge "inconnu" a été réparti proportionnellement entre tous les groupes d'âge après l'exploitation des données.

La mesure dans laquelle les statistiques sont complètes est indiquée par les lettres "C" ou "U" du code décrit à propos des statistiques de l'état civil en général (page 77) et qui se trouve dans le tableau 25.

La comparabilité des données peut aussi être affectée dans une certaine mesure par des divergences dans la méthode d'exploitation, c'est-à-dire, exploitation des données d'après la date le l'événement ou d'après celle de l'enregistrement. Une croix (†) désigne les pays qui ont exploité leurs données d'après la date de l'enregistrement.

L'exclusion de quelques séries de décès d'enfants qui meurent avant l'enregistrement de leur naissance et qui, de ce fait, figurent seulement sur le registre des mort-nés ou sur celui des "présentés sans vie" peut également contribuer au défaut de comparabilité, quoique les conséquences sur les chiffres soient, dans ce cas, à peu près nulles.

Tableau 27

Les derniers taux annuels de mortalité par âge et par sexe qui ont pu être calculés sont présentés dans le tableau 27. La répartition des décès par âge débute par un groupe d'âge de "moins d'un an", suivi de groupes d'âge quinquennaux jusqu'à 84 ans et se termine par un groupe d'âge de "85 ans et plus". Des traits horizontaux dans le tableau indiquent les endroits où l'on s'est écarté de cette classification.

Portée: Malgré la nécessité de disposer de la population de base correspondante répartie par âge et par sexe, il a été possible d'inclure 85 pays dans ce tableau. En l'occurrence, il fallait en effet que la population et les décès se rapportent au même territoire et qu'ils soient tous deux répartis selon les mêmes groupes d'âge. De plus, la répartition par âge devait être le résultat d'un recensement ou bien consister en une estimation ajustée dans le temps à l'aide des statistiques de l'état civil et des migrations. Les estimations par âge n'ont pas été calquées sur la répartition pour cent dans chaque groupe d'âge au moment du recensement.

Calcul des taux: En calculant les taux de mortalité par âge et par sexe on n'a pas tenu compte des décès survenus à un âge inconnu ni de la population d'âge inconnu, sauf lorsque ces éléments entraient dans le taux de mortalité calculé pour tous les âges combinés. Par conséquent, chaque taux représente le nombre de décès survenus dans un groupe d'âge déterminé au cours d'une année pour 1 000 habitants dans le même groupe d'âge au milieu de l'année ou à une autre période de l'année. Les chiffres de population à partir desquels les taux ont été calculés sont ceux figurant dans le tableau 10.

Il y a lieu de noter que, dans ce tableau, les taux pour le groupe de moins d'un an ne concordent pas avec les taux de mortalité infantile du tableau 28, lesquels sont établis d'après le nombre de naissances vivantes signalées pendant l'année plutôt que d'après celui d'enfants de moins d'un an au milieu de l'année.

De même, les taux pour tous les âges combinés diffèrent, dans plusieurs cas, de ceux présentés dans les tableaux 25 et 29 pour la raison qu'ils reposent sur un chiffre de population dont on disposait de la répartition par âge, tandis que les taux des tableaux 25 et 29 peuvent avoir été établis à partir de chiffres différents. Il est fort possible que le chiffre de la population répartie par âge et par sexe ait été fourni par un recensement effectué dans l'année plutôt qu'au milieu de l'année et qu'il comprenne ou non certains groupes ethniques, les forces armées, etc, par exemple. Quelquefois, la différence est attribuable au fait que les taux, dans ce tableau ont été calculés sur la population moyenne (obtenue en faisant la moyenne arithmétique des données par âge au mois de décembre de deux années consécutives) alors que les taux correspondants du tableau

25 reposent sur une estimation au 1er juillet. Les écarts de cet ordre sont très faibles et n'ont pas été signalés dans le tableau.

Insuffisances des données: Les taux de ce tableau reposent sur les nombres absolus du tableau 26 dont les observations relatives à la qualité des données s'appliquent également, par conséquent, au tableau 27.

Etablir une correspondance précise entre les décès et la population en ce qui concerne l'inclusion ou l'exclusion des forces armées, des réfugiés, des personnes déplacées et autres groupes spéciaux, constitue un problème particulièrement difficile lorsqu'il s'agit des taux de mortalité par âge. Dans les cas où il n'a pas été possible d'y parvenir des notes indiquent les différences de portée des données de base. Les taux de mortalité pour le sexe masculin dans les groupes d'âge de 20 à 40 ans sont quelquefois affectés par ce manque de correspondance et il y a lieu d'utiliser ces taux avec prudence lorsqu'on veut établir des comparaisons.

On doit ajouter que même dans les cas où la population et les décès correspondent, la comparabilité des taux peut être faussée par des conditions anormales telles que l'absence du territoire d'un grand nombre de jeunes hommes sous les drapeaux. Le résultat est que les taux de mortalité paraissent élevés à ces âges, simplement parce qu'un grand nombre d'hommes valides de ce groupe d'âge, dont le taux de mortalité pourrait être, dans des conditions normales, inférieur à la moyenne de celui des personnes de leur âge, a été écarté des calculs.

Tableau 28

Le tableau 28 renferme des statistiques de la mortalité infantile (décès d'enfants de moins d'un an) pour la période 1920-1954. Comme le tableau 25 celui-ci présente les nombres annuels de décès au-dessous d'un an pour 1946 à 1954 et les taux de mortalité infantile sous la forme de moyennes pondérées quinquennales de 1920 à 1934 et de taux annuels de 1946 à 1954.

Portée: Les données se rapportent à la population présente de 155 pays et territoires importants qui ont fourni des statistiques récentes sur la mortalité infantile. Comme les taux de mortalité infantile sont calculés à partir du nombre de naissances vivantes la mesure dans laquelle les chiffres de population de base sont disponibles n'est pas un facteur susceptible de limiter la portée de ce tableau.

Calcul des taux: Calculés suivant la méthode classique, les taux de mortalité infantile publiés dans ce tableau représentent le nombre de décès d'enfants de moins d'un an pour 1 000 naissances vivantes survenues pendant la même période. Cela signifie que l'on n'a pas tenu compte du fait que certains des décès qui se sont produits pendant une année sont ceux d'enfants nés au cours de l'année précédente. Toutefois, l'erreur n'est pas très importante, à moins que les nombres des naissances vivantes ou de décès d'enfants de moins d'un an ne varient rapidement.[15]

Insuffisances des données: La limitation la plus importante et la plus répandue apportée à la comparabilité des taux de mortalité infantile provient de l'établissement des statistiques des décès d'enfants de moins d'un an et des naissances vivantes d'après la date de l'enregistrement, quelle que soit celle à laquelle l'événement s'est produit. Lorsque cette pratique a pour effet d'augmenter fortement le nombre des naissances enregistrées pendant une année donnée, quelle que soit la raison de cet accroissement, elle peut introduire des erreurs considérables dans les taux de mortalité infantile, à plus forte raison du fait que les décès ont tendance à être déclarés plus rapidement que les naissances. Si le délai d'enregistrement reste presque constant et s'il est à peu près le même pour les naissances et pour les décès, les taux ne sont pas affectés dans des proportions appréciables par ce facteur. Mais si une grande partie des naissances ne sont enregistrées qu'après plusieurs années, comme c'est le cas dans beaucoup de pays, les taux de mortalité infantile obtenus en effectuant le rapport entre le nombre de décès d'enfants de moins d'un an survenus durant une année et celui des naissances qui se sont produites au cours de plusieurs années n'ont aucune valeur. Par suite de l'importance de ce facteur, en particulier pour ce qui est des naissances vivantes qui constituent le dénominateur des taux de mortalité infantile, on a indiqué par une croix (†) les statistiques établies d'après la date de l'enregistrement.

Même lorsque les statistiques se rapportent à la date de l'événement, des lacunes dans l'enregistrement des naissances et des décès d'enfants de moins d'un an affectent les taux de mortalité infantile à moins que la proportion des faits enregistrés ne soit la même pour le numérateur et pour le dénominateur. Afin d'éclairer l'utilisateur sur le caractère plus au moins complet des données les symboles "C" ou "U" du code expliqué en détail à la page 77 ont été employés dans ce tableau.

Ce code qui figure dans le tableau 25 relatif aux décès à tous âges, précise particulièrement ici la mesure plus ou moins complète dans laquelle les décès d'enfants de moins d'un an ont été enregistrés et communiqués. Comme on l'a déjà indiqué, les différences dans la proportion enregistrée des éléments constitutifs du taux de mortalité infantile, c'est-à-dire les décès d'enfants de moins d'un an et les naissances vivantes, introduisent des erreurs par excès ou par défaut, le sens de l'erreur étant déterminé par celui des deux éléments, (numérateur ou dénominateur) pour lequel l'enregistrement est le plus complet.

Ce caractère plus ou moins complet de l'enregistrement des naissances vivantes et des décès d'enfants de moins d'un an dépend également de la définition à des fins statistiques des événements à déclarer. Ainsi qu'on l'a déjà mentionné à la page 81, le fait de n'inscrire ni dans le registre des naissances ni dans celui des décès les enfants nés vivants décédés dans les premières 24 heures ou avant l'enregistrement de leur naissance, peut fausser les statistiques dans une certaine mesure, le taux accusant alors une erreur par défaut. Ne pas enregistrer en tant que naissances vivantes les nouveau-nés qui décèdent pendant les premières semaines de vie contribue également à créer un défaut de comparabilité entre les taux de mortalité infantile, mais les conséquences dans ce cas, si elles sont sensibles, tendraient à provoquer une erreur par excès.

Tableau 29

Les statistiques des causes de décès, à la fois sous la forme de nombres absolus et de taux, sont publiées dans

[15] Pour un exposé plus complet de ce problème, voir *Mortalité foetale, mortalité des enfants du premier âge et mortalité des jeunes enfants.* Organisation des Nations Unies, Département des questions sociales, Division de la population, document ST/SOA/Série A. Etudes démographiques No. 13, New-York, vol. I, chap. II.

le tableau 29. Ce tableau présente des données pour la dernière année pour laquelle on dispose de statistiques et pour le maximum de pays et territoires.

Le tableau 29 est composé de deux parties A et B. La partie A indique les décès et les taux classés d'après les 44 rubriques de la "Liste abrégée" de la Cinquième révision (1938) de la Nomenclature internationale des causes de décès[16] tandis que la partie B présente les données disposées d'après la "Liste abrégée de 50 rubriques pour la mise en tableaux des causes de mortalité" de la Sixième révision (1948) intitulée "Classement statistique international des maladies, traumatismes et causes de décès".[17]

Cette présentation en deux parties était nécessaire du fait que la révision de 1948, contrairement aux révisions antérieures ne fournit pas un cadre de classification directement adaptable au précédent, c'est-à-dire, à celui de la révision de 1938. En conséquence, il n'est pas possible d'assigner les données classées d'après la liste abrégée de 1938 aux causes de décès de la Liste abrégée de 1948 et comme plusieurs pays communiquent encore leurs données dans le cadre de la classification de 1938, les deux parties ont été jugées nécessaires pour assurer une portée géographique maximum. On notera cependant que 8 pays seulement figurent dans la partie A. On peut espérer qu'ils commenceront à classer leurs données d'après la nouvelle nomenclature dans un proche avenir.

Portée: 71 pays et territoires sont représentés dans le tableau, 8 dans la partie A (Révision de 1938) et 63 dans la partie B (Révision de 1948).

Les pays et territoires qui figurent dans ce tableau ont été choisis parce qu'ils ont fourni des données classées selon l'une ou l'autre des deux révisions précitées et seulement dans la mesure où le total des décès attribués à la "sénilité" ou à des "causes inconnues ou mal définies" ne dépassait pas vingt-cinq pour cent de l'ensemble. Dans tous les autres cas et même si l'on savait que les données étaient défectueuses parce que la plupart du temps les certificats de décès n'avaient pas été établis par des médecins, on a néanmoins publié les statistiques des pays en cause dans le tableau.

Calcul des taux: Le taux pour chaque cause de décès est exprimé par rapport à 100 000 personnes dans la population totale estimée au milieu de l'année ou à une autre période de l'année. En conséquence, le taux pour toutes les causes combinées est la somme des taux relatifs à chacune d'elles et représente 100 fois le taux brut de mortalité du tableau 25 ou le taux de mortalité à tous âges qui figure dans le tableau 27.

Dans un ou deux cas on remarquera que le taux pour toutes les causes combinées ne concorde pas exactement avec le taux de mortalité correspondant des tableaux 25 ou 27. Cette disparité est due en majeure partie à des différences dans le nombre total de décès classés selon la cause qui peuvent provenir d'omissions dans la transcription de certaines déclarations tardives ou de l'exclusion de la répartition des décès selon la cause d'enfants nés vivants décédés pendant les premières vingt-quatre heures ou avant l'enregistrement de leur naissance et qui ont été, par suite, enregistrés avec les "mort-nés" ou considérés comme "présentés sans vie". Dans certains pays, la méthode d'établissement des statistiques permet de différencier ces "pseudo mort-nés" des mort-nés véritables et de les ajouter au nombre total de décès mais, même dans ce cas, il n'est pas possible de connaître la cause du décès du moment qu'elle n'est pas enregistrée.

Insuffisances des données: Malgré leur grande importance dans le domaine démographique et dans celui de la santé publique, les statistiques des causes de décès présentent malheureusement de nombreuses imperfections outre celles déjà mentionnées comme limitant la comparabilité internationale des statistiques des décès en général. Ces restrictions supplémentaires proviennent principalement de différences entre les pays en ce qui concerne la qualité, la disponibilité et l'efficacité des services médicaux ainsi que des disparités dans la procédure suivie pour l'établissement des certificats de décès.

Il convient d'être très prudent lorsqu'on est en présence de répartitions dans lesquelles un nombre relativement élevé de décès est attribué à des causes "inconnues", "mal définies" ou "non spécifiées" ainsi qu'à la "sénilité". Dans de tels cas, les décès qui se sont produits dans des fractions importantes de la population peuvent n'avoir donné lieu à aucun diagnostic et il est alors probable que la répartition des causes connues est loin de donner une vue exacte de la situation d'ensemble. On n'a pas signalé en note ces répartitions auxquelles on ne peut trop se fier mais il importe d'interpréter avec beaucoup de circonspection les taux relatifs aux causes de décès se rapportant à des territoires dans lesquels une grande partie des décès sont attribués à la "sénilité" ou des "causes inconnues". En gardant ce détail à l'esprit lorsqu'on étudie la répartition des causes et en utilisant le code permettant d'apprécier d'une manière générale la qualité des données qui accompagne le tableau 25 on doit pouvoir se faire une idée suffisamment juste de la valeur des statistiques des causes de décès. Un examen plus détaillé des problèmes posés par l'interprétation de ces statistiques a été fait au chapitre II de *l'Annuaire démographique 1951.*

4. Statistiques de la nuptialité

Le tableau 30 présente des statistiques relatives aux mariages. Conformément aux recommandations contenues à ce sujet dans les *Principes directeurs d'un système de statistiques de l'état civil,*[18] les statistiques se rapportent, sauf indication contraire, aux "mariages officiels, c'est-à-dire à l'union légale de deux personnes de sexe différent sanctionnée par une cérémonie civile ou religieuse suivant la loi en vigueur dans chaque pays." Dans la mesure du possible, les données contenues dans le tableau concernent à la fois les mariages civils et religieux (si tous les deux sont reconnus par la loi) et représentent le nombre de mariages célébrés au cours de l'année spécifiée, plutôt que celui des mariages enregistrés pendant cette même année.

Les données figurant dans ce tableau se rapportent aux mariages célébrés à l'intérieur des frontières actuelles

[16] *Nomenclatures internationales des causes de décès 1938 (Classification Bertillon),* publié avec le concours du Ministère des Affaires étrangères de la République française par l'Institut International de Statistique, La Haye, 1940.

[17] *Manuel de classement statistique international des maladies, traumatismes et causes de décès,* Sixième révision des Nomenclatures internationales des maladies et causes de décès, adoptée en 1948, vol. I, (Bulletin de l'Organisation Mondiale de la Santé, Supplément 1, Genève, Suisse, 1948).

[18] *Op.cit.,* Principe 202.

des pays considérés et, sauf indication contraire, parmi la population présente. Cependant, en raison de la notion juridique sur laquelle reposent ces données, les mariages parmi les tribus ou les groupes indigènes isolés des formes de civilisation actuelle sont presque toujours exclus des statistiques. Ces cas ont néanmoins fait l'objet d'une note dan le tableau ainsi d'ailleurs que toute autre déviation du concept de la population présente.

Définitions: — Le mariage étant un acte juridique et non un fait biologique comme la naissance et le décès, le problème de la comparabilité se présente sous un aspect quelque peu différent pour ce genre de données. En raison des conséquences que pourrait avoir leur inclusion dans la définition du mariage à des fins statistiques et par suite de leur nature même, les unions consensuelles ne font pas partie de cette définition et sont exclues de ce fait des statistiques, sauf si des mesures spéciales tendant à les légaliser les font entrer dans la catégorie des mariages légaux. Dans certains pays, ces unions sont aussi fréquentes que les mariages officiels et sont considérées comme des mariages par les usages locaux. En cette occurrence, les statistiques des mariages qui reposent sur des enregistrements donnent une idée trompeuse du taux réel de formation des familles.

La nécessité d'obtenir des statistiques sur les unions consensuelles a été reconnue par la Commission de statistique dans les *Principes directeurs d'un système de statistiques de l'état civil*[19] (Principe 101). ". . . Il y aurait intérêt notamment à étudier des méthodes permettant d'obtenir des données sur les unions qui ne sont pas enregistrées (connues sous les noms divers de mariages "de droit commun", "coutumiers" ou "consensuels"), en reconnaissant que, par le caractère même des faits sur lesquels elles portent, ces données ne peuvent être recueillies, par la méthode d'enregistrement telle qu'elle est définie au Principe 102."

Jusqu'à ce qu'un procédé d'enregistrement de ces unions "non enregistrées" ait été mis au point, les statistiques des mariages continueront à se rapporter aux unions officielles ou légales et, en tant que telles, à être un indice trompeur de toutes les unions dont il est important de connaître le nombre aussi bien à des fins démographiques qu'au point de vue de la santé publique.

Les statistiques étant établies conformément à la définition légale que chaque pays donne du mariage sont de composition variable; elles dépendent des lois et des usages relatifs à l'enregistrement des mariages et de la manière dont sont recueillies les données. Ainsi, certains pays ne réunissent de statistiques que pour les mariages civils, bien que les mariages religieux soient quelquefois reconnus par la loi. Dans d'autres, les seuls relevés disponibles se trouvent dans les registres de l'église et les statistiques correspondent, par conséquent, aux mariages religieux seulement. Dans un ou deux pays les statistiques concernent les autorisations de mariage délivrées, c'est-à-dire, les documents officiels certifiant que les conditions à remplir pour se marier légalement (âge, consentement, état de santé, etc.) sont satisfaites. Le nombre des autorisations de mariage délivrées est nécessairement plus élevé que celui des mariages célébrés, car ces autorisations ne constituent que des déclarations d'intention qui ne sont pas toujours suivies de célébration du mariage. En l'absence de statistiques des mariages qui ont eu lieu elles constituent néanmoins une approximation assez bonne du nombre de mariages effectivement célébrés.

Mesure dans laquelle les données sont complètes — Par suite de la composition variable des statistiques des mariages dans chaque pays (mariages civils ou religieux, ou les deux à la fois) il est assez difficile d'évaluer la mesure dans laquelle les données sont complètes, si on doit entendre par là qu'elles comprennent tous les mariages ou unions qui ont eu lieu. Du reste, le concept de "perfection" des données (c'est-à-dire la mesure dans laquelle elles sont plus ou moins complètes) est vraiment difficile à définir dans le cas des mariages parce que, dans la plupart des pays du monde, l'union devient légale au moment même où elle est enregistrée. Toutefois, dans quelques-uns, comme les Etats-Unis, et dans ceux où les mariages religieux sont seuls légaux, le fait d'inscrire le mariage sur le registre de l'état civil constitue un acte distinct de la célébration propre et, en de telles circonstances, il peut exister une disparité entre le nombre de mariages légaux effectivement célébrés et celui des mariages enregistrés. En raison de ces considérations, le degré de "perfection" des données communiqué par les pays est indiqué dans le tableau 30 à l'aide des lettres "C" ou "U" du code qui dénotent des statistiques "complètes" ou "incomplètes" des mariages, quelle qu'en soit la définition.

Du fait qu'il peut s'écouler un certain temps entre la célébration d'un mariage et son enregistrement le symbole (†) a été utilisé dans le tableau 30 comme dans les autres tableaux pour désigner les statistiques établies d'après la date de l'enregistrement plutôt que d'après celle du mariage. Ainsi qu'on l'a déjà mentionné ce détail est plus important lorsqu'il s'agit de naissances vivantes. Il n'empêche qu'avec les renseignements sur la nature de données se trouvant à la base des statistiques, il peut être utile de le garder à l'esprit lorsqu'on étudiera les statistiques du tableau 30.

Tableau 30

Ce tableau, identique dans sa présentation aux autres tableaux retraçant l'évolution à long terme des naissances et des décès, indique les nombres de mariages célébrés de 1946 à 1954 ainsi que les taux bruts de nuptialité pour la période de 1920 à 1934 et de 1946 à 1954. Les taux sont publiés sous la forme de moyennes pondérées quinquennales de 1920 à 1934 et sous celle de taux annuels de 1946 à 1954.

Portée: Ce tableau comprend 147 pays et territoires, probablement un peu moins qui en auraient été représentés si on y avait publié uniquement les "nombres de mariages" parce que quelques-uns des chiffres de la population servant de base au calcul des taux ont fait défaut. Comme dans les tableaux similaires des naissances vivantes et des décès certains territoires sur lesquels on n'a pas de données récentes ne figurent pas dans le tableau. On remarquera également que bien que la portée géographique du tableau paraisse assez étendue, elle est très limitée pour la majeure partie de l'Afrique où les données ne se rapportent qu'à de petites fractions de la population totale.

Calcul des taux: Les taux du tableau 30, comme les taux bruts correspondants des autres tableaux, représentent le nombre de mariages signalés à l'intérieur des frontières du pays considéré pour 1 000 personnes dans la population

[19] *Op. cit.*

présente au milieu de l'année. Dans quelques cas seulement on s'est servi des résultats d'un recensement ou d'une estimation à une autre période de l'année au lieu de la population au milieu de l'année.

Les populations au milieu de l'année ou autres, utilisées pour le calcul des taux sont en général, les chiffres officiels qui se trouvent dans le tableau 3. Par suite, en l'absence d'un chiffre officiel de population on n'a pas calculé de taux même si on connaissait le nombre des mariages. D'une manière générale il suffit de se reporter au tableau 3 pour savoir ce que représentent les populations à partir desquelles ont été calculés les taux.

Insuffisances des données: Ainsi qu'on l'a déjà mentionné, ce tableau comme tous les autres qui indiquent l'évolution à long terme du mouvement de la population est accompagné d'un code permettant d'apprécier la qualité des données, qui se présente sous la forme des lettres "C" ou "U" disposées dans la première colonne du tableau. Des explications ont été données précédemment sur ce code à la page 77.

En examinant les taux bruts du tableau 30 on s'aperçoit aisément du défaut de comparabilité résultant des variations dans la définition du "mariage" et des différences qui existent entre les pays dans la proportion des unions "consensuelles", c'est-à-dire de celles qui ne sont pas enregistrées à l'état civil. Les taux extrêmement faibles relatifs à certains pays, particulièrement en Amérique du Sud, sont attribuables en grande partie à la prédominance des unions consensuelles, quoique dans certains cas, des lacunes dans l'enregistrement des mariages légaux aient pu y contribuer.

Les taux bruts de nuptialité, comme ceux de natalité et de mortalité n'offrent qu'un intérêt limité dans le domaine de l'analyse. Les mariages ont une autre signification lorsqu'ils sont rapportés à la population "mariable", c'est-à-dire aux célibataires en âge de contracter mariage, aux veufs et aux divorcés. Néanmoins, ces taux bruts mesurent les variations de la fréquence des mariages dans la population totale, et les fluctuations du taux sont souvent le reflet de changements survenus dans les conditions économiques et sociales du pays considéré.

5. Statistiques des divorces

Le tableau 31 est consacré aux divorces. Sauf indication contraire, les données qui y sont présentées se rapportent aux nombres de divorces prononcés communiqués par chacun des pays. Les divorces signalés peuvent avoir été prononcés par des tribunaux religieux ou civils suivant la loi de chaque pays; ils peuvent avoir été enregistrés par les tribunaux seulement ou par ceux-ci et l'officier de l'état civil; les statistiques peuvent être tirées directement des registres des tribunaux ou bien provenir de celles transmises sur les divorces. Ces différents facteurs n'ont aucune influence réelle sur la nature des données. On n'en a pas moins indiqué en note ce que représentent les statistiques contenues dans ce tableau lorsqu'on possédait des renseignements à cet égard.

Dans la mesure du possible, elles concernent les divorces enregistrés parmi la population présente du pays ou territoire considéré. Les divorces qui se sont produits chez les tribus ou les groupes indigènes isolés des formes de civilisation actuelle sont invariablement exclus des statistiques parce qu'ils ne sont pas prononcés par les tribunaux réguliers et échappent à l'enregistrement de l'officier de l'état civil.

Les données sont influencées par les mêmes considérations juridiques que celles dont il a déjà été question à propos des mariages. Elles sont même peut-être plus fortement affectées par les différences considérables qui existent entre les lois et procédures relatives à la dissolution du mariage, en vigueur dans les divers pays. Ces législations vont de la prohibition totale (Brésil, Chili, Colombie, Espagne, Irlande, Italie, entre autres), à l'attribution facile du divorce sur la simple manifestation d'un désir ou d'une intention de se séparer, en passant par tous les motifs possibles de divorce. Bien entendu, les nombres sont relativement plus petits dans les régions où le divorce est difficile à obtenir, quoique la diversité des traditions sociales soit aussi un facteur dominant dans les fluctuations de la courbe des divorces. Ces deux éléments ne sont d'ailleurs pas sans rapport.

Dans les pays où la polygamie est une institution reconnue, les statistiques des divorces ont une signification quelque peu différente. Dans ces régions, le facteur que constitue la liberté de prendre un autre époux est relativement peu important, tout au moins pour les hommes, et les divorces sont plus fréquents qu'ailleurs. L'Egypte reconnaît par exemple trois sortes de divorces (le divorce révocable, la séparation et le divorce définitif) lesquels s'attachent à considérer les possibilités de renouer le mariage plutôt que celles d'en contracter de nouveaux. Ces divorces prévoient aussi des obligations économiques et financières; il est vrai que c'est là une clause permanente dans la législation sur les divorces des autres pays.

En raison de ces différences, les taux de divorce ne peuvent être considérés comme un indice de la véritable proportion des unions dissoutes du point de vue démographique et social, de nombreux mariages étant détruits autrement que par le divorce (décès, abandon du foyer, etc.). Ils sont le reflet de la mesure dans laquelle la population peut supporter les frais de cette procédure ou de la sévérité des lois sur le divorce plutôt qu'une indication précise de la fréquence des ménages brisés et des désunions familiales.

Définitions: Les statistiques reposent sur la définition suivante du divorce qui est celle recommandée par les Nations Unies dans les *Principes directeurs d'un système de statistiques de l'état civil.*[20]

> *Le divorce est la dissolution légale et définitive des liens du mariage, c'est-à-dire la séparation de l'époux et de l'épouse par décision judiciaire conférant aux parties le droit de se remarier civilement ou religieusement ou les deux à la fois, conformément aux lois en vigueur dans chaque pays.*

Cette définition écarte automatiquement les "séparations légales" et les "annulations."

Il convient de noter cependant qu'un certain nombre de pays comprennent les annulations dans leurs statistiques des divorces. D'après les Principes directeurs d'un système de statistiques de l'état civil[21], l'annulation est *"la déclaration de l'invalidité ou de la nullité d'un mariage*

[20] *Op cit.* Principe 202.

[21] *Principes directeurs d'un système de statistiques de l'état civil, op. cit.,* Principe 202.

prononcée par une autorité complétente, conformément à la législation de chaque pays; l'annulation rend aux parties le statut qu'elles avaient avant le mariage". Ainsi l'annulation est différente du divorce parce que le mariage annulé est réputé ne pas avoir existé au lieu d'être dissous mais elle s'en rapproche du fait que, comme lui, elle confère aux deux parties le droit de se remarier. Dans les pays où le divorce véritable est reconnu, le nombre d'annulations est d'ordinaire assez faible. Il convient de noter toutefois que, dans les régions où le divorce est prohibé, l'annulation tend à remplacer le divorce comme moyen de dissolution du mariage.

L'inclusion, dans quelques cas, de séparations légales dans les statistiques des divorces contribue également à affecter la comparabilité entre les séries. En général *"La séparation légale est la séparation des époux à la suite d'une décision judicaire conformément à la législation du pays. La séparation légale ne confère pas aux parties le droit de se remarier"*[21]. Dans certaines régions, en Suède par exemple, la séparation légale n'est qu'une phase préliminaire du divorce, celui-ci étant automatiquement accordé après une certaine période de séparation.

Enfin, toujours en ce qui concerne la définition des données présentées, il faut ajouter que plusieurs pays communiquent le nombre "d'instances en divorce" plutôt que celui des "divorces prononcés". Il existe entre ces deux termes à peu près le même rapport qu'entre les autorisations de mariage délivrées et les mariages effectivement célébrés; cependant on peut dire, pour les divorces, que le nombre d'instances en cours devant les tribunaux constitue une approximation assez exacte des divorces prononcés quoique chaque demande déposée devant un tribunal ne donne pas toujours lieu à un arrêt en divorce. Lorsqu'on utilise les statistiques des instances en divorces plutôt que celles de divorces prononcés il importe de garder à l'esprit que les dates auxquelles se rapportent les événements considérés sont différentes. Dans de tels cas par exemple l'âge des divorcés ou celui des enfants à charge, etc., sont ceux au moment de l'instance en divorce introduite devant les tribunaux plutôt que ceux lorsque le divorce a été prononcé et cela peut représenter un décalage de plusieurs années.

Une appréciation de la mesure dans laquelle les données sont complètes est encore plus difficile pour les divorces que pour les mariages. Il en est ainsi parce que la prononciation d'un divorce est un acte juridique qui, de par sa nature doit être enregistré, et il est difficile d'imaginer comment on peut y échapper.

Toutefois, les statistiques des divorces reposent sur les arrêts enregistrés qui sont directement communiqués par les tribunaux religieux ou civils en cause, ou qui sont transmis par ces tribunaux aux services de statistique. Dans les deux cas, il est peut-être permis de penser qu'un certain nombre de divorces enregistrés ne sont pas comptés dans les statistiques, plus particulièrement ceux prononcés par les tribunaux religieux; c'est dans cet état d'esprit qu'il conviendra de considérer le code qui se trouve dans le tableau 31. Les éléments de ce code ont déjà été exposés à la page 77.

Comme pour les mariages l'établissement des statistiques d'après la date de l'enregistrement plutôt que d'après celle de l'événement n'a pas une importance appréciable sur la comparabilité des données. Il se peut qu'un certain temps s'écoule entre l'arrêt et son enregistrement à l'état civil, mais le délai ne saurait dépasser l'intervalle courant de transmission des données qui est normalement d'un mois ou d'un trimestre. Par suite, du manque d'homogénéité des données et de l'influence négligeable de ce facteur le symbole (†) permettant de distinguer à partir de quelle date (enregistrement ou événement) les données ont été établies, n'a pas été introduit dans ce tableau.

Tableau 31

Le tableau 31 présente les nombres de divorces prononcés ainsi que les taux bruts annuels de divorce pour les années 1946 à 1954.

Portée: Sauf indication contraire, les statistiques se rapportent à la population présente de 103 pays et territoires. Cette portée relativement étendue pour des statistiques de divorce est quelque peu inférieure à ce qu'elle aurait pu être pour diverses raisons. Ainsi que cela a déjà été le cas dans les autres tableaux retraçant l'évolution à long terme du mouvement de la population, la portée géographique de celui-ci a été réduite parce que l'on n'a pu toujours disposer des chiffres de population servant de base au calcul des taux pour les années 1946 à 1954, et également du fait que, dans certaines régions, le nombre de divorces était trop faible pour qu'on puisse obtenir des taux significatifs. Dans ce tableau comme dans ceux des naissances vivantes, des décès et des mariages la portée des statistiques pour l'Afrique est extrêmement limitée, surtout à cause de la nature des données.

Calcul des taux: Les taux bruts de divorce représentent le nombre de divorces prononcés, communiqués pendant une période déterminée, pour 1 000 personnes dans la population estimée au milieu de l'année ou à une autre période de l'année. En général, les chiffres de population à partir desquels on a calculé les taux sont les estimations officielles ou les résultats de recensements qui figurent dans le tableau 3. C'est également en se reportant à ce tableau qu'on pourra savoir ce que représentent les données qui constituent le dénominateur des taux et si ce sont des chiffres rectifiés ou non. Un examen des notes qui se trouvent au bas du tableau permet de se rendre compte qu'il n'a pas été toujours possible d'achever une correspondance exacte entre le numérateur et le dénominateur des taux. C'est ainsi que pour le Maroc Espagnol et Zanzibar les divorces sont ceux qui se sont produits dans certaines sections de la population tandis que les taux ont été calculés à partir de la population totale par nécessité. Ce manque de comparabilité a pour résultat de provoquer une erreur par défaut dans les taux quoique celle-ci soit probablement négligeable dans les pays en cause.

Insuffisances des données: On trouvera dans la première colonne du tableau 31 le code permettant d'évaluer la qualité des données dont il a déjà été question à la page 77. Bien qu'une appréciation de la mesure dans laquelle les données sont complètes est assez difficile, on espère que les indications des lettres C (données complètes) et U (données incomplètes) du code se révèleront assez utiles.

Les nombres totaux de divorces et les taux bruts de divorce sont soumis aux mêmes restrictions que celles qui sont valables pour les statistiques des divorces en général,

[21] *Principes directeurs d'un système de statistiques de l'état civil, op.cit.,* Principle 202.

sans oublier les disparités déjà mentionnées entre les législations relatives au divorce et la variété qui existe dans la nature des données auxquelles se rapportent les statistiques des divorces.

De plus, les taux bruts de divorce calculés par rapport à la population totale ont une valeur limitée comme tous les taux de cet ordre. Les taux bruts de divorce sont une mesure de la fréquence de la dissolution des mariages par le divorce ou des variations qui en résultent dans la population mariable; mais, par suite de la composition différente des populations selon l'état matrimonial et l'âge ils ne renseignent pas sur les probabilités de divorce parmi les personnes mariées ou les couples. Ils ne donnent qu'une idée générale des tendances dans le temps et des écarts existant entre les niveaux de divorce des divers pays, ces considérations étant affectées de façon permanente par les innombrables acceptions du terme "divorce" sur le plan international.

TABLES DE MORTALITE

Les tables de mortalité reposent sur l'observation des conditions de mortalité pendant une certaine période, mais elles se prêtent à une analyse plus détaillée des incidences et perspectives découlant de ces conditions que les taux classiques de mortalité.

Les valeurs de trois fonctions sont habituellement indiquées dans l'*Annuaire démographique:* la probabilité de décès dans le délai d'un an ou dans un intervalle d'âge déterminé pour les personnes d'un âge donné (q_x); les survivants au début de chaque intervalle d'âge sur une génération de 100 000 individus (l_x) et la vie moyenne restant à vivre ou l'espérance moyenne de vie pour les personnes d'un âge donné ($\mathring{e}_x$). Mais, comme cette édition de l'*Annuaire* est principalement consacrée aux statistiques fournies par les recensements de population, on n'a pu y inclure qu'un tableau donnant les valeurs d'une seule de ces fonctions, à savoir, l'espérance de vie ou le nombre moyen d'années restant à vivre ($\mathring{e}_x$) aux différents âges.

Les procédés de construction de la table de mortalité varient quelque peu, dépendant pour une large mesure de l'existence et de la nature des données de base. La valeur de q_x, qui est la fonction de base de la table de mortalité, est généralement calculée de façon à correspondre au taux de mortalité des personnes ayant cet âge, au cours d'une période déterminée. Les données de base sont généralement les suivantes: *a*) décès au cours d'une période déterminée, classés par âge et sexe; et *b*) population moyenne par âge et par sexe au cours de cette période. La méthode la plus employée consiste à utiliser les statistiques de décès s'étendant sur une période de trois ou cinq ans, choisies de telle sorte que la date du recensement se situe à peu près au milieu de la période; ainsi, les données du recensement peuvent être considérées comme indiquant la population moyenne. On se sert quelquefois de la période qui s'étend entre deux recensements, dans ce cas, les nombres utilisés sont la moyenne des résultats des deux recensements. Il arrive aussi que l'on procède à un ajustement pour tenir compte des mouvements de population. Dans quelques rares cas (en Inde, par exemple), des tables de mortalité approximatives ont été calculées sans recourir aux données relatives aux décès; la valeur de q_x a été établie en comparant le chiffre de la population dénombrée dans chaque groupe d'âge, lors d'un recensement, avec le nombre de survivants au recensement suivant. Il est de pratique courante de procéder à des corrections afin de rectifier les déclarations d'âge inexactes faites lors des recensements et de l'enregistrement des décès et afin d'obtenir une série de valeurs q_x ayant une allure régulière.

Des problèmes spéciaux se posent quand il s'agit de calculer les valeurs de q_x pour les premiers âges et les âges avancés. On obtient souvent les valeurs de q_x pour les premiers âges en utilisant les statistiques des naissances survenues au cours des toutes dernières années et en estimant par déduction le nombre d'enfants susceptibles de décéder au cours de la période à laquelle se rapporte la table de mortalité. Lorsqu'il s'agit des âges avancés, les données sont très souvent si rares et si discutables qu'elles doivent être remaniées de façon sensible pour pouvoir fournir une série correcte de valeurs de q_x. Dans de nombreux cas, les valeurs de q_x figurant dans les tables de mortalité pour les âges avancés ne sont nullement liées aux décès enregistrés pour ces âges; elles sont évaluées à partir des valeurs de q_x concernant les personnes moins âgées.

Bien que les tables de mortalité aient d'abord été développées en vue de calculs actuariels, elles ont de nombreuses applications dans le domaine démographique. Citons parmi celles-ci: 1) la prévision de la composition de la population par âge et sexe; 2) l'analyse des incidences de la mortalité sur la répartition par âge et par sexe d'une population donnée; 3) la comparaison des mesures sommaires de mortalité telles que les quotients de mortalité (réciproques de l'espérance de vie à la naissance), l'espérance de vie à différents âges, etc.; 4) le calcul des taux nets de reproduction; 5) l'évaluation de l'exactitude des recensements et de l'enregistrement des données de l'état civil. En outre, la technique des tables de mortalité a été appliquée à l'analyse d'autres genres de données démographiques, par exemple au calcul des probabilités de mariage, par âge et par sexe, sur la base des chiffres de recensements classés suivant l'état matrimonial.

L'exactitude des tables de mortalité dépend surtout de l'exactitude et du caractère plus ou moins complet de l'enregistrement des décès et des dénombrements de population effectués lors des recensements. Les lacunes sont probablement plus grandes dans l'enregistrement des décès que les omissions de cet ordre dans les recensements. Dans ce cas, les taux de mortalité sont sous-estimés et les valeurs de l_x (survivants) et de e_x surestimées. Les taux de mortalité calculés à partir des statistiques de la population et de la mortalité pour les premiers âges de la vie risquent, tout particulièrement, d'être sous-estimés; une erreur de ce genre affecte toutes les valeurs de l_x dans la table de mortalité. Comme on l'a déjà indiqué, les taux de mortalité infantile obtenus en comparant le nombre de décès d'enfants de moins d'un an et le nombre de naissances dans les pays où l'enregistrement est incomplet risquent d'être supérieurs ou inférieurs à la réalité; que l'erreur se produise dans un sens ou dans l'autre, elle aura des répercussions importantes sur les valeurs de l_x se rapportant à chaque âge. L'espérance de vie à la naissance ($\mathring{e}_o$) sera alors également surestimée ou sous-estimée.

L'exactitude et la comparabilité internationale des valeurs des tables de mortalité relatives aux âges avancés

sont particulièrement discutables. Ces valeurs sont extraites comme on l'a déjà indiqué, de données incomplètes qui ont fréquemment fait l'objet d'ajustements quelque peu arbitraires. Certains traits remarquables — par exemple le fait que l'espérance de vie au-delà de 60 ans est souvent nettement plus élevée dans les pays où la mortalité est forte en général que dans les pays ayant de faibles taux de mortalité — peuvent ainsi être uniquement le résultat des imperfections des tables de mortalité.

La variété qui préside aux méthodes utilisées pour l'établissement des tables de mortalité (ajustement des données, etc.) peut altérer le degré d'exactitude des résultats et nuire à leur comparabilité sur le plan international. Toutefois, cette variété a probablement des répercussions beaucoup moins prononcées que celles qui résultent des lacunes des recensements et de l'enregistrement des décès.

Tableau 32

Le tableau 32 indique "l'espérance de vie" ($\mathring{e}_x$) ou le nombre moyen d'années restant à vivre pour les personnes atteignant les âges spécifiés. Ces données reposent sur les quotients de mortalité de la table de mortalité (q_x). Les tables de mortalité auxquelles on a emprunté les données sont les dernières parues pour chaque pays. Les valeurs sont fournies séparément pour chaque sexe par année de la naissance à l'âge de 5 ans et tous les cinq ans ensuite jusqu'à l'âge de 85 ans. Le seul pays pour lequel les données sont présentées différemment est Hawaï dont les groupes d'âge ont été insérés sous forme d'en-têtes spéciaux dans le tableau.

Portée: 62 pays et territoires figurent dans le tableau 32. Le manque de données de base acceptables a réduit le nombre de pays pour lesquels on dispose de tables de mortalité mais, malgré cela, on constate un progrès notable dans le nombre de territoires représentés au cours de ces dernières années.

Insuffisances des données: Les valeurs relatives à l'espérance de vie sont affectées par les mêmes insuffisances que celles qui s'appliquent aux tables de mortalité en général. Les données du tableau 32 doivent être interprétées strictement d'après le principe selon lequel les groupes de survivants sont soumis, pour chaque âge, aux conditions de mortalité de la période couverte par la table de mortalité. Ainsi peut-on dire, en interprétant $\mathring{e}_{50}$ dans la table de mortalité 1945-1950 relative à la Norvège, que si les hommes atteignant l'âge de 50 ans restent soumis aux mêmes conditions de mortalité que celles valables pour la période 1945-50, ils vivront en moyenne 26,4 années après cet âge.

TABLES
TABLEAUX

NOTE ON GEOGRAPHIC AREAS

In so far as possible, the data presented in the *Demographic Yearbook* relate to territorial units within present *de facto* boundaries. Departures from this general rule are noted in the tables, except in a few cases where the difference involved is negligible.

The form of presentation in this Yearbook does not imply official endorsement or acceptance by the United Nations of the status or boundaries of the territories as listed or described. It was adopted solely for the purpose of providing a convenient geographic basis for the accompanying statistical series. The same qualification applies to all notes and explanations concerning the geographic units for which data are presented.

NOTE SUR LES REGIONS GEOGRAPHIQUES

D'une façon générale, les données présentées dans l'*Annuaire démographique* se rapportent au territoire compris à l'intérieur des frontières actuelles *de facto* des unités politiques ou géographiques considérées. Les exceptions à cette règle sont signalées dans les tableaux sauf dans quelques cas où la différence est négligeable.

On ne peut conclure de la présentation adoptée dans cet Annuaire que les Nations Unies approuvent ou reconnaissent officiellement le statut ou les limites des territoires mentionnés. Elle n'a été utilisée que pour donner un cadre géographique aux séries statistiques publiées. La même réserve s'applique également à toutes les notes et explications relatives aux pays qui figurent dans les tableaux.

* Provisional.
x Unofficial estimate.
[1] See explanation of code at end of table.
[2] Population for 1954 or available year per square kilometre of area.
[3] Population excludes enemy prisoners of war and alien armed forces within country, but includes nomad Arabs estimated at 12 000 in 1937, and 55 073 in 1947, of which 27 270 males and 27 803 females.
[4] Area of inhabited and cultivated territory is 34 815 km²; corresponding density is 651.
[5] For 1951.
[6] Excluding Walvis Bay, which is an integral part of the Union but is administered as if it were part of South West Africa.
[7] Includes population of Walvis Bay.
[8] For non-white population only; for white population, type of estimate is A1.
[9] Comprising Algiers, Constantine and Oran, which are Overseas Departments of the Republic of France, and the Southern Territories of Aïn-Sefra, Ghardaïa, Touggourt and Oasis.
[10] Non-indigenous population only.

* Provisoire.
x Estimation non officielle.
[1] Voir explication du code à la fin du tableau.
[2] Population par km² de superficie pour 1954 ou pour une autre année si on ne dispose d'aucune estimation pour 1954.
[3] Non compris les prisonniers de guerre ennemis et les forces armées étrangères dans le pays, mais y compris les arabes nomades estimés à 12 000 en 1937, et à 55 073 en 1947 (27 270 du sexe masculin et 27 803 du sexe féminin).
[4] La superficie habitée et cultivée est de 34 815 km² avec une densité de 651 habitants au km².
[5] Pour 1951.
[6] Non compris la région de Walvis Bay qui fait partie de l'Union mais qqui est administrée comme si elle faisait partie du Sud-Ouest Africain.
[7] Y compris Walvis Bay.
[8] Pour le reste de la population seulement: Blancs A1.
[9] Comprend Alger, Constantine et Oran (départements d'outre-mer de la République Française) et les territoires du Sud d'Aïn-Sefra, de Ghardaïa, de Touggourt et des Oasis.
[10] Population non indigène seulement.

1. Population by sex, area and density (continued) — Population selon le sexe, superficie et densité (suite)

* Provisional.
x Unofficial estimate.
[1] See explanation of code at end of table.
[2] Population for 1954 or available year per square kilometre of area.
[10] Non-indigenous population only.
[11] Includes population of area transferred in 1947 to Upper Volta.
[12] Constituted in 1947 from parts of French Sudan, Ivory Coast and Niger.
[13] Excluding dependencies: Iles Nossi-Bé, Iles Sainte-Marie, Iles Glorieuses, Iles Saint-Paul, Amsterdam, Marion, Archipel Crozet, Archipel de Kerguélen and Terre Adélie.
[14] For 1953.
[15] Associated State of the French Union.
[16] *De jure* population.
[17] Moroccan Moslem population only. The Moroccan-Jewish and non-Moroccan population enumerated 15 April 1951 numbered 199 156 and 362 814 respectively; the non-Moroccan population appears to have been somewhat underenumerated.
[18] Excludes military personnel in barracks.
[19] Overseas Department of Republic of France.
[20] Northern Zone only. For Southern Zone, see Spanish West Africa.
[21] Comprising Alhucemas, Chafarinas and Peñon de Velez de la Gomera.

* Provisoire.
x Estimation non officielle.
[1] Voir explication du code à la fin du tableau.
[2] Population par km² de superficie pour 1954 ou pour une autre année si on ne dispose d'aucune estimation pour 1954.
[10] Population non indigène seulement.
[11] Y compris la population du territoire rattaché en 1947 à la région de la Haute-Volta.
[12] Constituée en 1947 par la réunion de territoires enlevés au Soudan français, à la Côte d'Ivoire et au Niger.
[13] Non compris les dépendances: îles Nossi-Bé, îles Sainte-Marie, îles Glorieuses, îles Saint-Paul, Amsterdam, Marion, Archipel Crozet, Archipel de Kerguélen et Terre Adélie.
[14] Pour 1953.
[15] Etat associé dans le cadre de l'Union Française.
[16] Population de droit.
[17] Marocains musulmans seulement. Les Marocains israélites et les non-marocains s'élevaient à 199 156 et à 362 814 respectivement aux recensements du 15 avril 1951. Les résultats du recensement de la population non marocaine sont considérés comme quelque peu inférieurs à la réalité.
[18] Non compris les militaires dans les casernes.
[19] Département d'outre-mer de la République Française.
[20] Zone du Nord seulement. Voir l'Afrique-Occidentale Espagnole pour les chiffres relatifs à la Zone du Sud.
[21] C'est-à-dire, Alhucemas, Chafarinas et Peñon de Velez de la Gomera.

x Unofficial estimate.
[1] See explanation of code at end of table.
[2] Population for 1954 or available year per square kilometre of area.
[10] Non-indigenous population only.
[22] Including Corisco and Elobeys.
[23] Including the Southern Zone of Morocco [Sp.].
[24] Includes nomad population which is absent during the dry winter season.
[25] Including population of Mafeking, the capital which is located in the Union of South Africa, and civilian nationals working outside Territory, together numbering 14 401 at 1946 census, as well as nomad population estimated at 20 000 in 1946.
[26] Excludes nomad population.
[27] Colony and Protectorate. Population excludes temporary labourers from other areas, numbering 15 042 in 1951.
[28] Colony only. The 1951 annual "enumeration" of the Protectorate gave a total population of 252 389.
[29] Excludes population of Kombo-St. Mary Division, numbering 7 695 at 1951 census.
[30] For Protectorate only. For Colony, type of estimate is A . . .
[31] Colony and Protectorate.
[32] Includes an estimated 219 000 persons in Northern Frontier Provinces and parts of Rift Valley only partially covered by census, but excludes armed forces, 4 137 persons in transit and 188 Polish refugees in camps.
[33] Excluding dependencies, shown separately below.
[34] Comprising Diego Garcia, Peros Banhos, Agalega, Solomon and St. Brandon.

x Estimation non officielle.
[1] Voir explication du code à la fin du tableau.
[2] Population par km² de superficie pour 1954 ou pour une autre année si on ne dispose d'aucune estimation pour 1954.
[10] Population non indigène seulement.
[22] Y compris Corisco et Elobeya.
[23] Y compris la Zone du Sud du Maroc Espagnol.
[24] Y compris les nomades absents pendant la saison sèche d'hiver.
[25] Y compris la population de Mafeking, la capitale, située en Union Sud-Africaine et les civils nationaux travaillant hors du territoire, s'élevant ensemble à 14 401 personnes au recensement de 1946, ainsi que les nomades estimés à 20 000 en 1946.
[26] Non compris les nomades.
[27] Colonie et Protectorat. Non compris les ouvriers temporaires venant d'autres régions estimés à 15 042 en 1951.
[28] Colonie seulement. Le "dénombrement" annuel du protectorat de 1951 a indiqué une population de 252 389 habitants.
[29] Non compris la population de la circonscription de Combo Sainte-Marie s'élevant à 7 695 personnes au recensement de 1951.
[30] Protectorat seulement. Colonie: A. . .
[31] Colonie et Protectorat.
[32] Y compris 219 000 personnes environ dans les provinces frontalières du Nord, et une partie de la vallée du Rift (territoires partiellement recensés seulement), mais non compris les forces armées, 4 137 personnes de passage et 188 réfugiés polonais dans des camps.
[33] Non compris les dépendances qui figurent séparément ci-dessous.
[34] C'est-à-dire, Diego Garcia, Peros Banhos, Agalega, Solomon et St.-Brandon.

[x] Unofficial estimate.
[1] See explanation of code at end of table.
[2] Population for 1954 or available year per square kilometre of area.
[31] Colony and Protectorate.
[35] Excluding the British Cameroons shown separately below, the two parts of which are administered under the Federation of Nigeria since its establishment on 1 October 1954. For administrative purposes, the northern part of the Cameroons is included in the Northern Region of the Federation and the southern part is a quasi-autonomous unit known as Southern Cameroons.
[36] African population only.
[37] De jure count of indigenous African population, based on sample census. Non-African population present in the area numbered 40 715 for Northern Rhodesia and 145 879 for Southern Rhodesia at census of 8 May 1951.
[38] Including the dependencies of Ascension (population 292 at 1946 census) and Tristan da Cunha (estimated population 281 in 1952) but excluding the dependencies of Gough, Inaccessible and Nightingale which are uninhabited.
[39] For St. Helena only.
[40] Colony and dependencies, comprising 92 islands.
[41] Excludes approximately 700 men in military service in East Africa and the Middle East.
[42] Colony only. This census and test counts in the Protectorate during 1948 gave a total population of 1 858 275.
[43] Excludes persons in transit and Polish refugees in camps, numbering 209 and 4 020 respectively for Uganda.

[x] Estimation non officielle.
[1] Voir explication du code à la fin du tableau.
[2] Population par km² de superficie pour 1954 ou pour une autre année si on ne dispose d'aucune estimation pour 1954.
[31] Colonie et Protectorat.
[35] Non compris le Cameroun Britannique, qui figure séparément ci-dessous, dont les deux provinces sont administrées par la Fédération du Nigéria depuis son institution le 1er octobre 1954. Pour des raisons d'ordre administratif, la partie septentrionale du Cameroun est comprise dans la région septentrionale de la Fédération et la partie méridionale constitue une région quasi-autonome sous le nom de Cameroun méridional.
[36] Population africaine seulement.
[37] Dénombrement de droit de la population africaine indigène d'après la méthode du sondage. La population non africaine du territoire en question s'élevait à 40 715 personnes pour la Rhodésie du Nord et 145 879 pour la Rhodésie du Sud au recensement du 8 mai 1951.
[38] Y compris les dépendances d'Ascension (292 habitants au recensement de 1948) et de Tristan da Cunha (281 habitants environ en 1952) mais non compris les îles de Gough, Inaccessible et Nightingale qui sont inhabitées.
[39] Sainte-Hélène seulement.
[40] Colonie et dépendances, comprenant 92 îles.
[41] Non compris 700 militaires environ servant en Afrique Orientale et dans le Moyen Orient.
[42] Colonie seulement. Ce recensement et des "dénombrements d'essai" effectués dans le protectorat au cours de l'année 1948 ont indiqué une population totale de 1 858 275.
[43] Non compris les personnes de passage et les réfugiés polonais dans des camps, s'élevant respectivement à 209 et 4 020 dans l'Ouganda.

* Provisional.
x Unofficial estimate.
[1] See explanation of code at end of table.
[2] Population for 1954 or available year per square kilometre of area.
[10] Non-indigenous population only.
[14] For 1953.
[16] *De jure* population.
[36] African population only.
[44] Administered under the Federation of Nigeria.
[45] For 1952.
[46] Excluding armed forces.
[47] Excludes Polish refugees in camps, numbering 5 397 for both sexes.
[48] Including Walvis Bay, an integral part of the Union of South Africa administered as part of South West Africa.
[49] Excludes population of Walvis Bay.

* Provisoire.
x Estimation non officielle.
[1] Voir explication du code à la fin du tableau.
[2] Population par km² de superficie pour 1954 ou pour une autre année si on ne dispose d'aucune estimation pour 1954.
[10] Population non indigène seulement.
[14] Pour 1953.
[16] Population de droit.
[36] Population africaine seulement.
[44] Administré par la Fédération du Nigéria.
[45] Pour 1952.
[46] Non compris les forces armées.
[47] Non compris les réfugiés polonais des deux sexes dans des camps, au nombre de 5 397.
[48] Y compris la région de Walvis Bay qui fait partie de l'Union Sud Africaine mais qui est administrée comme si elle faisait partie du Sud-Ouest Africain.
[49] Non compris la population de Walvis Bay.

1. Population by sex, area and density (continued) — Population selon le sexe, superficie et densité (suite)

* Provisional.
x Unofficial estimate.
[1] See explanation of code at end of table.
[2] Population for 1954 or available year per square kilometre of area.
[16] *De jure* population.
[19] Overseas Department of Republic of France.
[33] Excluding dependencies, shown separately below.
[50] *De jure* population, but distribution by sex excludes 84 diplomatic personnel outside country.
[51] Population actually enumerated; total, both sexes, including 10 per cent adjustment for underenumeration, is 1 505 465.
[52] Excluding data for Canal Zone shown separately below.
[53] *De jure* population, but excluding civilian citizens of continental US absent from the country for extended periods of time. Census figure also excludes an estimated 435 000 members of the armed forces outside continental US at time of census.
[54] On 5 June 1953 Greenland became an overseas department of Denmark.
[55] Area of ice-free portion is 341 700 km².
[56] Including dependencies: Marie-Galante, la Désirade, les Saintes, Petite-Terre, St. Barthélemy and part of St. Martin.
[57] Comprising Aruba, Bonaire, Curaçao, Saba, St. Eustatius and part of St. Martin.
[58] Civilian population, excluding tourists.

* Provisoire.
x Estimation non officielle.
[1] Voir explication du code à la fin du tableau.
[2] Population par km² de superficie pour 1954 ou pour une autre année si on ne dispose d'aucune estimation pour 1954.
[16] Population de droit.
[19] Département d'outre-mer de la République Française.
[33] Non compris les dépendances qui figurent séparément ci-dessous.
[50] Population de droit mais 84 personnes appartenant au corps diplomatique hors du pays ne sont pas comprises dans la répartition par sexe.
[51] Population effectivement dénombrée; le chiffre total de la population des deux sexes, majoré de dix pour cent pour compenser les lacunes du recensement, est de 1 505 465 habitants.
[52] Non compris la Zone du Canal qui figure séparément ci-dessous.
[53] Population de droit, non compris les civils citoyens des Etats-Unis continentaux absents du pays pour de longues périodes. Le chiffre du recensement ne comprend également pas environ 435 000 militaires hors des Etats-Unis continentaux lors du recensement.
[54] Le Groenland est un département danois depuis le 5 juin 1953.
[55] La superficie non occupée par les glaces est de 341 700 km².
[56] Y compris les dépendances: Marie-Galante, la Désirade, les Saintes, Petite-Terre, St.-Barthélemy et une partie de St.-Martin.
[57] Comprennent Aruba, Bonaire, Curaçao, Saba, St.-Eustache et une partie de St.-Martin.
[58] Population civile à l'exclusion des touristes.

x Unofficial estimate.
[1] See explanation of code at end of table.
[2] Population for 1954 or available year per square kilometre of area.
[14] For 1953.
[16] *De jure* population.
[45] For 1952.
[78] Excluding Taiwan shown separately below.
[79] Comprising islands of Taiwan and Pescadores.
[80] Excludes foreigners.
[81] Including Sikkim, Andaman, Nicobar and Laccadive Islands, but excluding settlements of Karikal, Mahé, Pondichéry and Yanaon which became part of India on 1 November 1954 (population estimated at 323 000 in 1952).
[82] *De jure* population, excluding Kashmir-Jammu and the tribal areas of Assam where the census could not be taken.
[83] Includes Kashmir-Jammu.
[84] Includes population of Netherlands New Guinea.
[85] Excludes nomad population, estimated at 250 000 for both sexes.
[86] Jewish population only.
[87] Jewish population of Palestine.
[88] For Jewish population only; for Moslem population type of estimate is D...
[89] Comprising Hokkaido, Honshu, Shikoku, Kyushu and small outlying islands, and the Amami Islands transferred to Japan from the Ryukyu Islands on 5 December 1951 and 25 December 1953.
[90] For 1 October.
[91] Excludes Allied military and civilian personnel and their dependents.
[92] Including West Jordan (i.e., the part of Arab Palestine annexed 25 April 1950). Population excludes military personnel and their families living on military installations.
[93] Population excludes civilian aliens, numbering 21 885 at 1949 census, and alien armed forces within country.
[94] Lebanese nationals only.
[95] Mongolian population only, in area excluding Kobdo district and the possessions of Bogdo-Gegen. Total population at time of census unofficially estimated at 647 504 persons.
[96] Excluding Kashmir-Jammu, Gilgit, Baltistan, Junagadh and Manavadar.
[97] Excludes large rivers in East Bengal with area of approximately 930 km².

x Estimation non officielle.
[1] Voir explication du code à la fin du tableau.
[2] Population par km² de superficie pour 1954 ou pour une autre année si on ne dispose d'aucune estimation pour 1954.
[14] Pour 1953.
[16] Population de droit.
[45] Pour 1952.
[78] Non compris Taïwan qui figure séparément ci-dessous.
[79] Comprend les îles de Taïwan et des Pescadores.
[80] Non compris les étrangers.
[81] Y compris Sikkim et les îles Andaman, Nicobar et Laccadive, mais non compris les comptoirs de Karikal, Mahé, Pondichéry et Yanaon qui font partie de l'Inde depuis le 1er novembre 1954 (323 000 habitants environ en 1952).
[82] Population de droit, non compris le Cachemire-Jammu et la Zone de tribus d'Assam où il n'a pas été possible d'effectuer de recensement.
[83] Y compris le Cachemire-Jammu.
[84] Y compris la population de la Nouvelle-Guinée Néerlandaise.
[85] Non compris les nomades des deux sexes estimés à 250 000.
[86] Population juive seulement.
[87] Population juive de Palestine.
[88] Pour la population juive seulement. Population musulmane: D...
[89] Comprend Hokkaïdo, Honshu, Shikoku, Kyu-Shu et les petites îles adjacentes; ainsi que les îles Amami détachées des îles Ryû-Kyû et rattachées au Japon le 5 décembre 1951 et le 25 décembre 1953.
[90] Au 1er octobre.
[91] Non compris les militaires et les civils alliés ainsi que les membres de leur famille les accompagnant.
[92] Y compris la Jordanie de l'ouest (c'est-à-dire, la partie de la Palestine arabe annexée le 25 avril 1950). Non compris les militaires et leurs familles vivant dans des baraquements de l'armée.
[93] Non compris les civils étrangers au nombre de 21 885 au recensement de 1949 et les forces armées étrangères dans le pays.
[94] Ressortissants libanais seulement.
[95] Population mongole seulement sur un territoire ne comprenant pas le district de Kobdo et les possessions de Bogdo-Gegen. L'estimation non officielle de la population totale établie au moment du recensement est de 647 504 personnes.
[96] Non compris le Cachemire-Jammu, le Gilgit, le Bultistan, le Junagadh et le Manavadar.
[97] Non compris les grands fleuves du Bengale oriental (environ 930 km² de superficie).

* Provisional.
x Unofficial estimate.
[1] See explanation of code at end of table.
[2] Population for 1954 or available year per square kilometre of area.
[14] For 1953.
[16] *De jure* population.
[119] Finnish nationals in Finland only, including merchant seamen at sea.
[120] Metropolitan (continental) France only.
[121] Excludes population of communes of Tende and Brigue, ceded by Italy in 1947.
[122] Excludes alien armed forces within country and members of the career military service outside country except those on occupation duty in Germany and Austria. Includes all occupation personnel and their dependents in Germany and Austria, military conscripts within and outside country and merchant seamen at sea, together estimated at 187 000.
[123] Includes population of villages of Elten and Tüddern, transferred to the Netherlands in 1949 (population estimated at 9 000 at time of transfer). Includes also prisoners of war, civilian internees, and refugees in transit camps, together numbering 384 323.
[124] Referred to elsewhere as "Eastern Germany", and comprising the former USSR zone of occupation.
[125] Referred to elsewhere as "Western Germany" and comprising the former British, French and US zones of occupation, but excluding the Saar.
[126] Includes armed forces outside country; excludes alien armed forces within country.
[127] Excludes population of the Dodecanese, ceded by Italy in 1947.
[128] Includes population of Bratislava Bridgehead, ceded to Czechoslovakia in 1947 (population 3 379 in 1941).
[129] Present territory, including that part of the former Free Territory of Trieste incorporated in October 1954.
[130] Including armed forces and civilian retinue outside country because of war.
[131] Excludes population of villages of Elten and Tüddern, ceded by Germany in 1949 (population estimated at 9 000 at time of transfer).
[132] Land area only; total area up to low-waterline (sea-level at low tide) is 40 893 km².
[133] In territory of 1937, i.e., including areas ceded to USSR after World War II and excluding Danzig and areas formerly part of Germany.
[134] Including the Azores and Madeira Islands.

* Provisoire.
x Estimation non officielle.
[1] Voir explication du code à la fin du tableau.
[2] Population par km² de superficie pour 1954 ou pour une autre année si on ne dispose d'aucune estimation pour 1954.
[14] Pour 1953.
[16] Population de droit.
[119] Ressortissants finlandais en Finlande seulement, y compris les équipages de la marine marchande en mer.
[120] France métropolitaine seulement.
[121] Non compris les communes de Tende et Brigue cédées par l'Italie en 1947.
[122] Non compris les forces armées étrangères dans le pays et les militaires de carrière en service hors du pays à l'exception de ceux en occupation en Allemagne et en Autriche. Y compris tous les civils et militaires en occupation en Allemagne et en Autriche ainsi que les membres de leur famille les accompagnant, les jeunes gens faisant leur service militaire dans le pays et hors du pays et les équipages de la marine marchande en mer, s'élevant ensemble à 187 000 personnes environ.
[123] Y compris les villages d'Elten et de Tüddern, cédés aux Pays-Bas en 1949 (environ 9 000 habitants au moment du transfert). Y compris également les prisonniers de guerre, les civils internés, et les réfugiés de passage dans les camps, s'élevant ensemble à 384 323 personnes.
[124] Désignée ailleurs comme "Allemagne Orientale" et comprenant l'ancienne zone d'occupation soviétique.
[125] Désignée ailleurs comme "Allemagne Occidentale" et comprenant les anciennes zones d'occupation britannique, française et américaine, non compris la Sarre.
[126] Y compris les forces armées nationales hors du pays; non compris les troupes étrangères dans le pays.
[127] Non compris le Dodécanèse, cédé par l'Italie en 1947.
[128] Y compris la tête de pont de Bratislava cédée à la Tchécoslovaquie en 1947 (3 379 habitants en 1941).
[129] Territoire actuel, y compris la partie de l'ancien territoire libre de Trieste attribuée à l'Italie en octobre 1954.
[130] Y compris les forces armées et les civils retenus hors du pays par suite de la guerre.
[131] Non compris les villages d'Elten et de Tüddern cédés par l'Allemagne en 1949 (environ 9 000 habitants au moment du transfert).
[132] Superficie terrestre seulement; la superficie totale (limite des eaux à marée basse) est de 40 893 km².
[133] Territoire de 1937, c'est-à-dire, y compris les régions cédées à l'URSS après la Seconde Guerre mondiale et non compris Dantzig et les territoires faisant autrefois partie de l'Allemagne.
[134] Y compris les Açores et Madère.

[1] See explanation of code at end of table.
[2] Population for 1954 or available year per square kilometre of area.
[10] Non-indigenous population only.
[148] Population excludes full-blooded aborigines, estimated at 47 000 in 1944.
[149] Including Campbell and Kermadec Islands (population 19 at 1951 census; area 148 km²) but excluding the other minor islands which are uninhabited.
[150] Comprising Austral, Gambier, Marquesas, Rapa, Society and Tuamotu Islands.
[151] Including 1 209 schedules not tabulated by sex.
[152] Including dependencies: Wallis, Futuna, Huon and Chesterfield Islands.
[153] Comprising the Solomon Islands group except Bougainville and Buka (see New Guinea below); also including Ontung, Java, Rennell, and Santa Cruz Islands.
[154] Including Christmas, Fanning, Ocean and Washington Islands; also including the Phoenix Island group, of which Canton and Enderbury Islands have been an Anglo-American condominium since 6 April 1939. The population of Canton was 272 at census taken 1 April 1950 under US auspices; Enderbury Island was uninhabited at that time.
[155] Population estimated at 125 in 1951.

* Provisoire.
x Estimation non officielle.
[1] Voir explication du code à la fin du tableau.
[2] Population par km² de superficie pour 1954 ou pour une autre année si on ne dispose d'aucune estimation pour 1954.
[10] Population non indigène seulement.
[148] Non compris les purs aborigènes estimés à 47 000 en 1944.
[149] Y compris les îles Campbell et Kermadec (19 habitants au recensement de 1951 sur 148 km²) mais non compris les îles secondaires qui sont inhabitées.
[150] Comprend les îles Australes, Gambier, Marquises, Rapa, de la Société et Touamotou.
[151] Y compris 1 209 questionnaires qui n'ont pas fait l'objet d'une exploitation par sexe.
[152] Y compris les dépendances: îles Wallis, Futuna, Huon et Chesterfield.
[153] Constituent le groupe des îles Salomon à l'exception des îles de Bougainville et de Buka (voir Nouvelle-Guinée ci-après). Non compris également les îles Ontung, Java, Rennell et Santa Cruz.
[154] Y compris les îles Christmas, Fanning, Océan et Washington. Y compris également le groupe des îles Phoenix parmi lesquelles les îles Canton et Enderbury se trouvent sous un condominium anglo-américain depuis le 6 avril 1939. La population de Canton s'élevait à 272 habitants au recensement du 1er avril 1950, effectué par les autorités américaines; l'île d'Enderbury était inhabitée à cette date.
[155] Population estimée à 125 habitants en 1951.

[1] See explanation of code at end of table.
[2] Population for 1954 or available year per square kilometre of area.
[10] Non-indigenous population only.
[61] *De jure* population but including US armed forces stationed in the area.
[156] Comprising Northeast New Guinea, the Bismarck Archipelago, Bougainville and Buka of the Solomon Islands group, and about 600 smaller islands.
[157] Land area only; total, including the ocean area within administrative boundaries, approximately 2 589 998 km².
[158] Comprising the Carolines, Marianas and Marshall Islands, which came under US trusteeship on 19 July 1947.
[159] Excludes US administrative and military personnel stationed in the area.
[160] Inhabited dry land area only; total, including ocean area within administrative boundaries, approximately 7 771 755 km².
[161] Census figures refer to 1939 territory. The population of territories annexed during 1939-1940 (Estonia, Latvia and parts of former Lithuania, Czechoslovakia, Finland, Poland, and Romania), was estimated at 23 million in 1940. Area figures and estimate refer to present territory, which also includes Tannu-Tuva, Southern Sakhalin and the Kurile Islands, the remainder of former Lithuania and former parts of Germany.

x Estimation non officielle.
[1] Voir explication du code à la fin du tableau.
[2] Population par km² de superficie pour 1954 ou pour une autre année si on ne dispose d'aucune estimation pour 1954.
[10] Population non indigène seulement.
[61] Population de droit, y compris les forces armées américaines en garnison dans la région.
[156] Comprend le nord-est de la Nouvelle-Guinée, l'archipel Bismarck, Bougainville et Buka du groupe des îles Salomon et environ 600 îlots.
[157] Superficie terrestre seulement. La superficie totale comprenant les eaux maritimes se trouvant à l'intérieur des frontières administratives est de 2 589 998 km².
[158] Comprennent les îles Carolines, Mariannes et Marshall sous tutelle américaine depuis le 19 juillet 1947.
[159] Non compris le personnel administratif et militaire américain dans la région.
[160] Superficie terrestre et habitée seulement. La superficie totale comprenant les eaux maritimes se trouvant à l'intérieur des frontières administratives est de 7 771 755 km².
[161] Les chiffres du recensement se rapportent au territoire de 1939. La population des territoires annexés en 1939-1940 (Estonie, Lettonie et fractions des anciens états lituanien, tchécoslovaque, finlandais, polonais et roumain), était estimée à 23 millions d'habitants en 1940. Les données relatives à la superficie concernent le territoire actuel qui comprend le reste de l'ancienne Lituanie; Tannou-Touva; la partie méridionale de l'île de Sakhaline ainsi que les Kouriles, et certains territoires appartenant autrefois à l'Allemagne.

[See headnote on page 99. — Voir note explicative à la page 99.]

TYPE OF ESTIMATE—The code symbols indicate the method by which official estimates of population for the year 1954 were prepared, so far as could be ascertained. The letters R and A to E of the code indicate the nature of the base data; the numerals 0 to 8 indicate the method of time adjustment to other dates. The details of the code classification are given below.

Base data are classified as follows:

R—continuous population registers.
A—census enumerations, the last having been made since 1 January 1950.
B—census enumerations, the last having been made between 1 January 1945 and 1 January 1950.
C—census enumerations, the last having been made prior to 1 January 1945.
D—non-censal counts or partial censuses.
E—conjectural estimates derived by other means than counting.

Methods of time adjustment are classified as follows:

0—none, base data being secured annually and requiring no time adjustment.
1—substantially accurate statistics of births and deaths, and (where relevant) comprehensive migration statistics.
2—substantially accurate statistics of births and deaths; doubtful or deficient data on migratory movements, or no account taken of such movements.
3—birth and death statistics of undetermined reliability (adequacy of migration data is disregarded).
4—birth and death statistics which are stated to be deficient (adequacy of migration data is disregarded).
5—mathematical extrapolation (or interpolation), at least three censuses having been taken since 1900.
6—mathematical extrapolation (or interpolation), less than three censuses having been taken since 1900.
7—assumed rates of increase not derived by mathematical extrapolation.
8—none, base figure being held constant.
. .—method of adjustment not ascertained.
See page 9 for further explanation.

TYPES D'ESTIMATIONS—Les symboles indiquent la méthode d'après laquelle ont été établies les estimations officielles de population pour l'année 1954, dans la mesure où l'on a pu s'assurer de la méthode utilisée. Les lettres R et A à E du code précisent la nature des données de base; les chiffres 0 à 8 correspondent aux procédés d'adaptation chronologique. La signification des divers éléments du code est donnée ci-dessous.

Les données de base sont classées de la façon suivante:

R—registres permanents de population.
A—recensements, le dernier ayant été effectué après le 1er janvier 1950.
B—recensements, le dernier ayant été effectué entre le 1er janvier 1945 et le 1er janvier 1950.
C—recensements, le dernier ayant été effectué avant le 1er janvier 1945.
D—dénombrements différant d'un recensement ou recensements partiels.
E—évaluations conjecturales obtenues par d'autres moyens que des dénombrements.

Les procédés d'adaptation chronologique sont classés de la façon suivante:

0—aucun, données de base fournies annuellement, adaptation inutile.
1—statistiques relativement exactes des naissances et décès, et (à l'occasion) données assez complètes sur les migrations.
2—statistiques relativement exactes des naissances et décès; données discutables ou incomplètes sur les mouvements migratoires, ou aucun relevé de ces déplacements de population.
3—statistiques des naissances et décès de qualité inconnue (il n'est pas tenu compte de l'exactitude des données relatives aux migrations).
4—statistiques des naissances et décès signalées comme incomplètes (il n'est pas tenu compte de l'exactitude des données relatives aux migrations).
extrapolation ou intrapolation mathématique, trois recensements au moins ayant été effectués depuis 1900.
6—extrapolation ou intrapolation mathématique, moins de trois recensements ayant été effectués depuis 1900.
7—taux d'accroissement présumés, non dérivés d'une extrapolation mathématique.
8—pas d'adaptation, donnée de base utilisée en permanence.
. .—procédé d'adaptation inconnu.
Voir explications complémentaires à la page 55.

2. Estimated population, area and density of the world by continents and regions : 1920, 1930, 1940, 1950 and 1954

Estimations de la population, superficie et densité du monde par continents et régions géographiques principales : 1920, 1930, 1940, 1950 et 1954

(For discussion, see page 12. — Voir explications à la page 58.)

[1] Estimates include adjustments for overestimation and underenumeration.
[2] Including land area and inland waters, but excluding uninhabited polar regions and some uninhabited islands.
[3] Population per km² of area.
[4] Including Turkey but excluding the USSR shown separately below.
[5] Excluding the USSR shown separately below and the European part of Turkey included in Asia.

[1] Comprennent des chiffres ajustés pour tenir compte des lacunes de quelques recensements et d'erreurs par excès dans l'établissement de certaines estimations.
[2] Y compris la superficie terrestre et les eaux intérieures, mais non les régions polaires inhabitées et quelques îles désertes.
[3] Population au km².
[4] Y compris la Turquie, mais non l'URSS qui figure séparément ci-dessous.
[5] Non compris l'URSS qui figure séparément ci-dessous et la Turquie d'Europe dant la population est comprise dans le total pour l'Asie.

3. Estimates of total population : 1920, 1925, 1930, 1935, 1940 and 1942 – 1955

[Official estimates of population for 1 July or averages of official end-year estimates. Figures shown in italics are census counts and refer to the date of enumeration. For type of estimate, 1954, see Table 1; for discussion, see page 13.]

§ Estimates for last intercensal period not yet revised to accord with census results.

[1] Including population of Mafeking, the capital, which is located in the Union of South Africa, and civilian nationals working outside Territory, together numbering 14 401 at 1946 census. Excluding nomad population, estimated at 20 000 in 1946.

[2] European, Indian and Coloured, together comprising about one percent of the total population.

[3] Excluding enemy prisoners of war and alien armed forces within country.

[4] Excluding temporary labourers from other areas, numbering 15 042 in 1951.

[5] Excludes population of Kombo-St. Mary Division, numbering 7 695 at 1951 census of Colony.

[6] *De jure* population.

[7] "Non-Moroccan," excluding military personnel in barracks.

[8] Fluctuations 1943-1947 believed attributable to incomplete registration, famine and emigration.

[9] For 31 December.

[10] Former mandated territory (Union of South Africa).

[11] Excluding armed forces.

3. Estimations de la population totale : 1920, 1925, 1930, 1935, 1940 et 1942 – 1955

[Les données sont des estimations officielles au 1er juillet ou des moyennes d'estimations officielles de fin d'année. Les chiffres en italiques sont les résultats de recensements et se rapportent à la date du dénombrement. Le type des estimations pour 1954 est indiqué au tableau 1. Voir explications à la page 59.]

§ Estimations établies entre les deux derniers recensements et non encore alignées sur les résultats du dernier.

[1] Y compris la population de Mafeking, la capitale, située en Union Sud-Africaine et les civils nationaux travaillant hors du pays, soit 14 401 personnes au recensement de 1946. Non compris les nomades estimés à 20 000 en 1946.

[2] Européens, indiens et métis qui représentent ensemble 1 pour cent environ de la population totale.

[3] Non compris les prisonniers de guerre ennemis et les forces armées étrangères dans le pays.

[4] Non compris les ouvriers temporaires venus d'autres régions, (15 042 en 1951).

[5] Non compris la circonscription de Combo Sainte-Marie dont la population s'élevait à 7 695 personnes lors du recensement de la colonie de 1951.

[6] Population de droit.

[7] Population "non marocaine," non compris les militaires dans les casernes.

[8] Les fluctuations de 1943 à 1947 sont attribuées à un enregistrement incomplet, à la famine et à l'émigration.

[9] Au 31 décembre.

[10] Territoire auparavant sous mandat (Union Sud-Africaine).

[11] Non compris les forces armées.

3. Estimates of total population (continued)

* Provisional.

§ Estimates for last intercensal period not yet revised to accord with census results.

[6] *De jure* population.

[9] For 31 December.

[18] Estimates for 1 September.

[19] Excluding Indian jungle population.

[20] Excludes Amerindian population of remote districts, estimated at 9 700 in 1921 and 7 400 in 1931.

[21] Estimate each year includes 465 144 as adjustment for underenumeration at 1940 census, and 350 000 for Indian jungle population.

[22] Including Indian and Negro population of the interior, estimated at 11 200 in 1920, 19 600 in 1930, 20 500 in 1935, 21 600 in 1939-1945, 25 700 in 1946-1951 and 26 000 in 1952.

[23] Registered population, excluding Indian and Negro population of the interior estimated at 26 000.

[24] Excluding Indian jungle population, estimated at 100 600 in 1941 and 56 700 in 1950.

[25] Estimates for 1925 and 1930 exclude data for areas not enumerated in 1921; estimates for 1935 and 1940 exclude data for areas not enumerated in 1931.

[26] Excluding non-resident military and shipping personnel, numbering 36 606 at 1946 census.

[27] Excludes foreigners.

[28] Excluding persons in military and special internment camps, numbering 12 422 at 1946 census.

[29] Civilian population, including refugees and immigrants estimated at 750 000 in 1940 and 600 000 in 1941.

[30] Including Kashmir-Jammu and, beginning 1951, Chandernagor, transferred from French India in 1950. Excluding Mahé, Karikal, Pondichéry and Yanaon which became part of India 1 November 1954 (population estimated at 323 000 in 1952).

[31] Revised to accord with results of the 1951 census.

[32] Excludes population of Kashmir-Jammu and tribal areas of Assam, where census could not be taken; population of excluded areas estimated at 4.41 million and 560 600 respectively.

[33] Prior to 1947, registration area of former British Provinces, representing approximately 75 per cent of former India, not including Burma. Beginning 1947, registration area of Republic of India.

[34] Prior to 1948, including Netherlands New Guinea.

[35] Prior to 1949, estimates for 21 March.

[36] Excluding Bedouin population in the Negev.

[37] Prior to 1948, Jewish population of Palestine.

[38] Prior to 1953, excluding the Amami Islands, acquired from the Ryukyu Islands between 1951 and 1953 (population 216 110 at 1 December 1950 census and 201 753 in June 1953). Also excluding Allied military and civilian personnel and their dependents. Prior to 1950, estimates for 1 October.

[39] For 1 November.

[40] Excluding military personnel and their families living on military installations.

[41] Korean nationals only.

[42] Estimates based on residents' register and prior to 1941, not in accord with results of quinquennial censuses, 1920-1940.

[43] Korean nationals only (aliens numbered 21 885 at 1949 census).

[44] Lebanese nationals only.

[45] Excluding transients afloat, non-resident military personnel and enemy prisoners of war, numbering 14 735 at 1947 census.

* Provisoire.

§ Estimations établies entre les deux derniers recensements et non encore alignées sur les résultats du dernier.

[6] Population de droit.

[9] Au 31 décembre.

[18] Estimations au 1er septembre.

[19] Non compris la population indienne de la jungle.

[20] Non compris les Amérindiens des districts éloignés estimés à 9 700 en 1921 et à 7 400 en 1931.

[21] L'estimation établie chaque année comprend une évaluation de 465 144 personnes pour compenser les lacunes du recensement de 1940 et une de 350 000 pour tenir compte des habitants de la jungle.

[22] Y compris les indiens et les nègres de l'intérieur estimés à 11 200 en 1920, 19 600 en 1930, 20 500 en 1935, 21 600 pour la période de 1939 à 1945, à 25 700 pour celle de 1946 à 1951 et à 26 000 en 1952.

[23] Population "enregistrée" à l'exclusion des indiens et nègres de l'intérieur estimés à 26 000.

[24] Non compris la population indienne de la jungle estimée à 100 600 personnes en 1941 et à 56 700 en 1950.

[25] Les estimations pour 1925 et 1930 ne portent pas sur les territoires non recensés en 1921; les estimations pour 1935 et 1940 ne portent pas sur les territoires non recensés en 1931.

[26] Non compris les militaires non résidents et les membres d'équipages de la marine marchande s'élevant à 36 606 au recensement de 1946.

[27] Non compris les étrangers.

[28] Non compris les personnes dans des camps militaires et d'internement s'élevant à 12 422 au recensement de 1946.

[29] Population civile, y compris les réfugiés et les immigrants s'élevant à 750 000 en 1940 et à 600 000 en 1941.

[30] Y compris le Cachemire-Jammu et, depuis 1951, Chandernagor détachée de l'Inde française. Non compris Mahé, Karikal, Pondichéry et Yanaon qui font partie de l'Inde depuis le 1er novembre 1954 (population estimée à 323 000 personnes en 1952).

[31] Chiffre aligné sur les résultats du recensement de 1951.

[32] Non compris le Cachemire-Jammu et la zone de tribus d'Assam où aucun recensement ne put avoir lieu; la population de ces territoires est respectivement estimée à 4 410 000 et 560 600 habitants.

[33] Avant 1947, territoire d'enregistrement des anciennes provinces britanniques, représentant approximativement 75 pour cent de l'Inde avant le partage, non compris la Birmanie. Depuis 1947, territoire d'enregistrement de la République de l'Inde.

[34] Avant 1948, y compris la Nouvelle-Guinée néerlandaise.

[35] Avant 1949, estimations au 21 mars.

[36] Non compris les bédouins du Negev.

[37] Avant 1948, population juive de Palestine.

[38] Avant 1953, non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953 (216 110 habitants au recensement du 1er décembre 1950 et 201 753 en juin 1953). Non compris également les militaires et civils alliés ainsi que les membres de leurs familles les accompagnant. Avant 1950, estimations au 1er octobre.

[39] Au 1er novembre.

[40] Non compris les militaires et leurs familles vivant dans des baraquements de l'armée.

[41] Coréens seulement.

[42] Estimations basées sur les registres de la population de résidence habituelle. Avant 1941, la série ne correspond pas tout à fait aux résultats des recensements quinquennaux de 1920 à 1940.

[43] Coréens seulement (les étranger s'élevaient à 21 885 au recensement de 1949).

[44] Nationaux libanais seulement.

[45] Non compris les passagers à bord des navires, les militaires non résidents et les prisonniers de guerre ennemis s'élevant ensemble à 14 735 au recensement de 1947.

§ Estimates for last intercensal period not yet revised to accord with census results.

[6] *De jure* population.

[9] For 31 December.

[46] Prior to 1946, excluding Labuan acquired from Straits Settlement in 1946 (population 7 507 at 1 April 1931 census).

[47] Excluding Kashmir-Jammu, Gilgit, Baltistan, Junagadh and Manavadar.

[48] In registration area only, representing about 90 per cent of total.

[49] Territory formerly under British mandate. Excluding military personnel, numbering 2 507 at 1931 census.

[50] Excluding the Amami Islands transferred to Japan between 1951 and 1953 (population 219 048 at 1 December 1950 census). For 1944 and 1949, excluding military and foreign population. For 1950, excluding allied military and civilian personnel and their dependents. Beginning 1952, *de jure* population.

[51] Estimates for 1 October.

[52] Prior to 1947, Singapore Island only. Excluding transients afloat, non-resident military personnel and enemy prisoners of war, numbering 36 015 at 1947 census.

[53] Excluding nomad and semi-nomad population, estimated at 288 400 in 1945.

[54] Prior to 1939, excluding Hatay, acquired from Syria 29 June 1939 with population estimated at 204 000 at time of transfer.

[55] *De facto* population.

[56] Excludes population of 41 communes not under Belgian administration (population 88 090 in 1939).

[57] Prior to 1941, excluding Southern Dobruja.

[58] Civilian population only.

[59] Prior to 1948, excluding territory ceded by Hungary in 1947 (population 3 379 in 1941).

[60] Prior to 1950, Finnish nationals in Finland.

[61] Including merchant seamen at sea.

[62] Excluding prisoners of war (estimated at 663 000 in 1946 and 467 000 in 1947), alien armed forces within country and members of the career military service outside country except those on occupation duty in Germany and Austria. Including all occupation personnel and their dependents in Germany and Austria, military conscripts within and outside country and merchant seamen at sea, together estimated at 312 000 in 1946 and 187 000 in 1954.

[63] Territory of 1937.

[64] *De jure* population, including displaced persons in camps.

[65] Beginning 1951, West Berlin only.

[66] Prior to 1948, excluding Dodecanese, acquired from Italy 19 October 1947 with population numbering 115 343 at time of transfer.

[67] Prior to 1944, including territory ceded to Czechoslovakia in 1947.

§ Estimations établies entre les deux derniers recensements et non encore alignées sur les résultats du dernier.

[6] Population de droit.

[9] Au 31 décembre.

[46] Avant 1946, non compris le Labuan détaché des Etablissements des détroits en 1946 (7 507 habitants au recensement du 1er avril 1931).

[47] Non compris le Cachemire-Jammu, le Gilgit, le Bultistan, le Junagadh et le Manavadar.

[48] Sur le territoire d'enregistrement seulement, comprenant environ 90 pour cent de la population totale.

[49] Territoire auparavant sous mandat britannique. Non compris les troupes s'élevant à 2 507 hommes au recensement de 1931.

[50] Non compris les îles Amami rattachées au Japon entre 1951 et 1953 (219 048 habitants au recensement du 1 er décembre 1950). Pour les années 1944 et 1949, non compris les militaires et les étrangers. Pour 1950, non compris les militaires et civils alliés ainsi que les membres de leurs familles les accompagnant. Depuis 1952, population de droit.

[51] Estimations au 1er octobre.

[52] Avant 1947, île de Singapour seulement. Non compris les passagers à bord des navires, les militaires non résidents et les prisonniers de guerre ennemis s'élevant ensemble à 36 015 au recensement de 1947.

[53] Non compris les nomades et semi-nomades estimés à 288 400 en 1945.

[54] Avant 1939, non compris Hatay, cédé par la Syrie le 29 juin 1939 avec une population estimée à 204 000 habitants au moment du transfert.

[55] Population de fait.

[56] Non compris les 41 communes qui n'étaient pas alors administrées par la Belgique (88 090 habitants en 1939).

[57] Avant 1941, non compris la Dobroudja méridionale.

[58] Population civile seulement.

[59] Avant 1948, non compris le territoire cédé par la Hongrie en 1947 (3 379 habitants en 1941).

[60] Avant 1950, nationaux finlandais en Finlande.

[61] Y compris les équipages de la marine marchande en mer.

[62] Non compris les prisonniers de guerre estimés à 663 000 en 1946 et 467 000 en 1947, les forces armées etrangères dans le pays et les militaires de carrière hors du pays à l'exception de ceux se trouvant en occupation en Allemagne et en Autriche. Y compris les forces d'occupation et les membres de leurs familles les accompagnant en Allemagne et en Autriche, les jeunes gens faisant leur service militaire dans le pays et hors du pays, les équipages de la marine marchande en mer estimés ensemble à 312 000 personnes en 1946 et à 187 000 en 1954.

[63] Territoire de 1937.

[64] Population de droit, y compris les personnes déplacées dans les camps.

[65] Depuis 1951, Berlin-Ouest seulement.

[66] Avant 1948, non compris le Dodécanèse cédé par l'Italie le 19 octobre 1947 avec une population de 115 343 personnes au moment du transfert.

[67] Avant 1944, y compris le territoire cédé à la Tchécoslovaquie en 1947.

§ Estimates for last intercensal period not yet revised to accord with census results.

[6] *De jure* population.

[9] For 31 December.

[13] *De jure* population, but including US armed forces stationed in the area.

[31] Revised to accord with results of the 1951 census.

[39] For 1 November.

[68] Present territory, including that part of the former Free Territory of Trieste incorporated in October 1954. 1936-1950: including armed forces and civilian retinue outside country because of war.

[69] Excluding non-Maltese armed forces stationed in the area.

[70] Prior to 1949, excluding villages of Elten and Tüddern (population approximately 9 000 in 1949).

[71] Prior to 1946, territory of 1937, i.e., including areas ceded to USSR after World War II, and excluding Danzig and areas formerly part of Germany.

[72] Prior to 1940, including Southern Dobruja (ceded to Bulgaria in 1940) and Bessarabia and Northern Bucovina (ceded to USSR in 1940). 1940-1945: excluding Northern Transylvania (temporarily ceded to Hungary), but in 1943 including Bessarabia and Northern Bucovina (temporarily regained from USSR).

[73] 1920-1945; territory defined by Treaty of Versailles; beginning 1946, present territory, but excluding commune of Kirrberg prior to May 1949. *De jure* population, but during war years excluding troops in garrisons and drafted labourers.

[74] For 1 April.

[75] For 10 October.

[76] Excluding enemy prisoners of war. 1940-1949: including armed forces outside country and merchant seamen at sea, but excluding Commonwealth and foreign armed forces within country. 1950: including merchant seamen at sea.

[77] 1943-1947: excluding certain classes of seamen, estimated at 151 000 in 1943.

[78] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954 (population estimated at 67 725 in 1953). Prior to 1947, excluding also territory ceded by Italy in 1947.

[79] Excluding full-blooded aborigines, estimated at 47 000 in 1944. 1940-1946: including armed forces outside country.

[80] Estimates for 31 March.

[81] Excluding US administrative and military personnel.

[82] Including Indochinese and Japanese workers and other legal immigrants, numbering 10 513 in 1944.

[83] Including "assimilated" population.

§ Estimations établies entre les deux derniers recensements et non encore alignées sur les résultats du dernier.

[6] Population de droit.

[9] Au 31 décembre.

[13] Population de droit, y compris les forces armées américaines stationnées dans la région.

[31] Chiffre aligné sur les résultats du recensement de 1951.

[39] Au 1er novembre.

[68] Territoire actuel, y compris la partie de l'ancien territoire libre de Trieste attribuée à l'Italie en octobre 1954. 1936-1950: y compris les forces armées et civils se trouvant hors du pays par suite de la guerre.

[69] Non compris les militaires non maltais stationnés dans la région.

[70] Avant 1949, non compris les villages d'Elten et de Tüddern (environ 9 000 habitants en 1949).

[71] Avant 1946, territoire de 1937, c'est-à-dire, y compris les régions cédées à l'URSS après la Seconde Guerre mondiale et non compris Dantzig ainsi que les provinces faisant autrefois partie de l'Allemagne.

[72] Avant 1940, y compris la Dobroudja méridionale (cédée à la Bulgarie en 1940), la Bessarabie et la Bukovine du Nord (cédées à l'URSS en 1940); 1940-1945: non compris la Transylvanie du Nord (cédée temporairement à la Hongrie) mais y compris, en 1943, la Bessarabie et la Bukovine du Nord (temporairement reconquises sur l'URSS).

[73] 1920-1945: territoire du traité de Versailles; depuis 1946, territoire actuel, non compris la commune de Kirrberg avant mai 1949. Population de droit, non compris, pendant la guerre, les troupes en garnison et les personnes affectées au service du travail obligatoire.

[74] Au 1er avril.

[75] Au 10 octobre.

[76] Non compris les prisonniers de guerre ennemis. 1940-1949: y compris les forces armées britanniques hors du pays, et les équipages de la marine marchande en mer et non compris les troupes étrangères et celles du Commonwealth dans le pays. 1950: y compris les équipages de la marine marchande en mer.

[77] 1943-1947: non compris certaines classes de marins au nombre approximatif de 151 000 en 1943.

[78] Non compris Koper et Buje constituant la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954 (environ 67 725 habitants en 1953). Avant 1947, non compris également le territoire cédé par l'Italie en 1947.

[79] Non compris les purs aborigènes estimés à 47 000 en 1944. 1940-1946: y compris les forces armées hors du pays.

[80] Estimations au 31 mars.

[81] Non compris les militaires et fonctionnaires américains.

[82] Y compris les travailleurs japonais et indochinois ainsi que d'autres immigrants légaux s'élevant ensemble à 10 513 en 1944.

[83] Y compris la population "assimilée".

[3] Non compris les prisonniers de guerre ennemis et les forces armées étrangères dans le pays.

[84] Depuis 1947, non compris les militaires et fonctionnaires américains.

[85] Avant 1950 et pour 1954, estimations au 31 mars.

[86] Estimations au 31 decembre.

4. Area, enumerated population and intercensal rates of increase : 1850 – 1954

Superficie, population dénombrée et taux d'accroissement entre recensements consécutifs : 1850 – 1954

[Rates are the average annual percentage increases from date of last previous census, calculated by the compound interest formula. A negative increase, i.e., a decrease, is denoted by a minus sign (—) preceding the rate. For discussion, see page 13.

Les taux représentent le pourcentage d'accroissement annuel depuis le dernier recensement, obtenu en appliquant la formule des intérêts composés. Un accroissement négatif, c-à-d, une diminution, est indiqué par le signe moins (—) placé avant le taux. Voir explications à la page 60.]

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[2] First series: *de jure* population.

[3] Excluding nomad population, estimated at 20 000 in 1946.

[4] Includes population of Mafeking, the capital, which is located in the Union of South Africa, and civilian nationals working outside Territory, together numbering 14 401.

[5] Administered under the Federation of Nigeria.

[6] Excluding nomad population numbering 98 196 in 1882, 79 773 in 1897, 97 381 in 1907, 32 663 in 1917, 40 000 in 1927, 12 000 in 1937 and 55 073 in 1947.

[7] Excludes enemy prisoners of war and alien armed forces within country.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[2] Première série: population de droit.

[3] Non compris les nomades estimés à 20 000 en 1946.

[4] Y compris la population de Mafeking, la capitale, située en Union Sud-Africaine, et les civils nationaux travaillant hors du territoire, s'élevant ensemble à 14 401 personnes.

[5] Administré par la Fédération du Nigéria.

[6] Non compris les nomades au nombre de 98 196 en 1882, de 79 773 en 1897, de 97 381 en 1907, de 32 663 en 1917, de 40 000 en 1927, de 12 000 en 1937, et de 55 073 en 1947.

[7] Non compris les prisonniers de guerre ennemis et les forces armées étrangères dans le pays.

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[8] Colony only. The 1951 annual "enumeration" of the Protectorate gave a total population of 252 389, excluding temporary labourers from other areas numbering 15 042.

[9] Excludes an estimated 219 000 persons in Northern Frontier Provinces and parts of Rift Valley only partially covered by census, armed forces, 4 137 persons in transit, and 188 Polish refugees in camps.

[10] First series: excluding dependencies.

[11] Reliability of results affected by hurricane which occurred 3 weeks before date of census.

[12] Moroccan Moslem population only; the Moroccan Jewish and non-Moroccan population enumerated 15 April 1951 numbered 199 156 and 362 814 respectively.

[13] *De jure* population.

[14] Indigenous population only. Non-indigenous population enumerated in 1930 numbered 35 570.

[15] Excluding British Cameroons, the two parts of which are administered under the Federation, but which is shown separately above.

[16] Believed to be underenumerated.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[8] Colonie seulement. Le "dénombrement" annuel du protectorat en 1951 a donné un total de 252 389 habitants (non compris les ouvriers temporaires venant d'autres régions estimés à 15 042).

[9] Non compris 219 000 personnes environ dans les provinces frontalières du Nord, et une partie de la vallée du Rift (territoires partiellement recensés seulement), les forces armées, 4 137 personnes de passage, et 188 réfugiés polonais dans des camps.

[10] Première série: non compris les dépendances.

[11] Qualité des résultats affectée par l'ouragan survenu trois semaines avant le recensement.

[12] Musulmans marocains seulement, les juifs marocains et les non-marocains dénombrés le 15 avril 1951 s'élevaient respectivement à 199 156 et à 362 814.

[13] Population de droit.

[14] Population indigène seulement; la population non indigène dénombrée en 1930 s'élevait à 35 570 personnes.

[15] Non compris le Cameroun britannique, dont les deux provinces sont administrées par la Fédération, mais qui figure séparément ci-dessus.

[16] Chiffre considéré comme inférieur à la réalité.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[17] African population only, based on sample census. Non-African population enumerated 8 May 1951 numbered 40 715.

[18] African population indigenous to Southern Rhodesia, based on sample census. Non-African population enumerated 8 May 1951 numbered 146 324.

[19] First series: excluding dependencies. Second series: including dependency of Ascension.

[20] Colony only. This census and test counts in the Protectorate during June 1948 gave a total population of 1 858 275.

[21] Former mandated territory (Union of South Africa) but including Walvis Bay (area 969 km² and population 3 327 in 1951), an integral part of the Union of South Africa administered as part of South West Africa.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoire, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[17] Population africaine seulement; recensement par sondage. Le recensement de la population non-africaine du 8 mai 1951 a donné le total de 40 715 personnes.

[18] Population africaine indigène de la Rhodésie du Sud; recensement par sondage. Le recensement de la population non africaine du 8 mai 1951 a donné le total de 146 324 personnes.

[19] Première série: non compris les dépendances. Deuxième série: y compris la dépendance d'Ascension.

[20] Colonie seulement. Le recensement et les "dénombrements d'essai" du protectorate au cours du mois de juin 1948 ont donné le total de 1 858 275 habitants.

[21] Territoire auparavant sous mandat (Union Sud-Africaine), mais y compris Walvis Bay (territoire de 969 km² avec une population de 3 327 personnes en 1951) qui fait partie de l'Union Sud-Africaine tout en étant administré comme s'il faisait partie du Sud-Ouest Africain.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.
[13] *De jure* population.
[27] *De jure* population, but including US armed forces stationed in the area.
[30] Area change due to remeasurement.
[31] First series: excluding Newfoundland.
[32] For Provinces of Quebec, Ontario, Prince Edward Island, Nova Scotia and New Brunswick and partial coverage of Manitoba, British Columbia and Northwest Territories.
[33] First series: excluding 57 km² of area added in 1924.
[34] Second series: *de jure* population.
[35] Apparent decrease stated to be due to overenumeration at 1946 census.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.
[13] Population de droit.
[27] Population de droit, mais y compris les forces armées américaines en garnison dans la région.
[30] Modification de la superficie provenant d'un nouvel arpentage.
[31] Première série: non compris Terre-Neuve.
[32] Pour les provinces de Québec, de l'Ontario, de l'Ile du Prince Edouard, de la Nouvelle-Ecosse et du Nouveau-Brunswick, ainsi que certaines parties du Manitoba, de la Colombie britannique et des territoires du Nord-Ouest.
[33] Première série: non compris 57 km² de territoire acquis en 1924.
[34] Deuxième série: population de droit.
[35] Diminution apparente attribuable à ce que le chiffre du recensement de 1946 était supérieur à la réalité.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.
[13] De *jure* population.
[34] Second series: *de jure* population.
[36] Believed to be overstated by approximately 1 million persons.
[37] Rate for period 2 August 1921-18 April 1950.
[38] Population actually enumerated; total, including 10 per cent adjustment for underenumeration is 1 505 465.
[39] Grand Cayman Island only.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.
[13] Population de droit.
[34] Deuxième série: population de droit.
[36] Chiffre considéré comme supérieur de 1 million de personnes environ à la réalité.
[37] Taux pour la période du 2 août 1921 au 18 avril 1950.
[38] Population effectivement dénombrée; le total majoré de 10 pour cent pour compenser les lacunes du recensement est de 1 505 465 habitants.
[39] Ile du Grand Cayman seulement.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.
[13] De *jure* population.
[16] Believed to be underenumerated.
[27] De *jure* population, but including US armed forces stationed in the area.
[30] Area change due to remeasurement.
[35] Apparent decrease stated to be due to overenumeration at 1946 census.
[40] Excluding tribal Indian population numbering 47 204 in 1911, 61 629 in 1920, 39 438 in 1930, 55 987 in 1940 and 48 654 in 1950; also excluding Canal Zone, shown separately above.
[41] De *jure* population, but excluding members of armed forces outside continental United States and civilian citizens absent from country for extended periods of time.
[42] Excluding territory purchased from Mexico in 1853.
[43] Population actually enumerated; total including adjustment for underenumeration in Southern States, is 39 818 449.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.
[13] Population de droit.
[16] Chiffre considéré comme inférieur à la réalité.
[27] Population de droit, mais y compris les forces armées américaines en garnison dans la région.
[30] Modification de la superficie provenant d'un nouvel arpentage.
[35] Diminution apparente attribuable à ce que le chiffre du recensement de 1946 était supérieur à la réalité.
[40] Non compris les indiens groupés en tribus au nombre de 47 204 en 1911, de 61 629 en 1920, de 39 438 en 1930, de 55 987 en 1940 et de 48 654 en 1950; non compris également la Zone du Canal qui figure séparément ci-dessus.
[41] Population de droit, non compris les membres des forces armées en garnison hors des Etats-Unis continentaux, et les civils absents du pays pour de longue périodes.
[42] Non compris le territoire acheté au Mexique en 1853.
[43] Population effectivement dénombrée; le chiffre total de la population, ajusté pour compenser les lacunes du dénombrement dans les états du sud, est de 39 818 449.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[13] De *jure* population.

[30] Area change due to remeasurement.

[41] De *jure* population, but excluding members of armed forces outside continental United States, civilian citizens absent from country for extended periods of time.

[44] Second series: *de jure* population, but including US armed forces stationed in the area.

[45] Population actually enumerated, excluding Indian population estimated at 30 000 in 1895 and 38 400 in 1914, and also adjustments for underenumeration estimated at 1.5 per cent for 1895 and 1914, and 1 per cent for 1947.

[46] First series: territory as of date of census, not including adjustment for territories transferred to Argentina, Brazil, Chile and Paraguay. Second series: present territory, including adjustments for territorial changes and for omissions and underenumeration estimated at 5 per cent in 1900 and 11.6 per cent in 1950.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[13] Population de droit.

[30] Modification de la superficie provenant d'un nouvel arpentage.

[41] Population de droit, non compris les membres des forces armées en garnison hors des Etats-Unis continentaux, les civils absents du pays pour de longues periodes.

[44] Deuxième série: population de droit, mais y compris les forces armées américaines en garnison dans la région.

[45] Population effectivement dénombrée, à l'exclusion des indiens estimés à 30 000 en 1895 et à 38 400 en 1914 et d'ajustements pour compenser les lacunes du recensement (1,5 pour cent environ en 1895 et 1914, et 1 pour cent environ en 1947).

[46] Première série: territoire à la date du recensement, compte non tenu d'un ajustement pour les territoires cédés à l'Argentine, au Brésil, au Chili et au Paraguay. Deuxième série: territoire actuel, y compris des ajustements pour les modifications territoriales survenues, pour tenir compte d'omissions et pour compenser les lacunes des recensements (environ 5 pour cent en 1900 et 11,6 pour cent en 1950).

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[13] De *jure* population.

[30] Area change due to remeasurement.

[46] First series: territory as of date of census, not including adjustment for territories transferred to Argentina, Brazil, Chile and Paraguay. Second series: present territory, including adjustments for territorial changes and for omissions and underenumeration estimated at 5 per cent in 1900 and 11.6 per cent in 1950.

[47] Population actually enumerated; for adjusted population see second series.

[48] First series: excluding territories acquired from Bolivia in 1903 and Colombia in 1907. Third series: de *jure* population.

[49] Believed to be overstated.

[50] Excluding Amerindians of remote districts, numbering 9 700 in 1921, 7 379 in 1931 and 6 023 in 1946.

[51] First series: population actually enumerated. Second series: including adjustments for omissions and underenumeration.

[52] Because of territorial losses and remeasurement area varied from 1 569 900 in 1835 to 1 548 300 in 1903, and to 1 138 355 in 1928; exact area not known for intervening years.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[13] Population de droit.

[30] Modification de la superficie provenant d'un nouvel arpentage.

[46] Première série: territoire à la date du recensement, compte non tenu d'un ajustement pour les territoires cédés à l'Argentine, au Brésil, au Chili et au Paraguay. Deuxième série: territoire actuel, y compris des ajustements pour les modifications territoriales survenues, pour tenir compte d'omissions et pour compenser les lacunes des recensements (environ 5 pour cent en 1900 et 11,6 pour cent en 1950).

[47] Population effectivement dénombrée; pour le chiffre rectifié de la population, voir la deuxième série.

[48] Première série: non compris les territoires cédés par la Bolivie en 1903 et par la Colombie en 1907. Troisième série: population de droit.

[49] Chiffre considéré comme supérieur à la réalité.

[50] Non compris les Amérindiens des districts éloignés, au nombre de 9 700 en 1921, de 7 379 en 1931 et de 6 023 en 1946.

[51] Première série: population effectivement dénombrée. Deuxième série: y compris des ajustements pour tenir compte d'omissions et compenser les lacunes des recensements.

[52] Par suite de cessions et de nouvelles estimations de la superficie, le territoire a varié de 1 569 900 km² en 1835 à 1 548 300 en 1903 et à 1 138 355 en 1928. La superficie exacte n'est pas connue pendant les années intermédiaires.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.
[53] Excluding penal, military and tribal Indian population, together numbering 7 050 in 1936, 1 516 in 1946 and 1 988 in 1954.
[54] Population actually enumerated; total, including 50 067 for underenumeration and 17 000 for Indian jungle population, is 1 408 400.
[55] Territory as of date of census, including, for 1862 and 1876, Arica (population 8 012 and 9 041 respectively) and Tarapacá (population 19 220 and 38 225 respectively).
[56] Population actually enumerated; total, including adjustments of 465 144 for underenumeration and 350 000 for Indian jungle population, is 7 023 111.
[57] Excluding Indian and Negro population of the interior, numbering 11 167 in 1921.
[58] For District of Surinam only.
[59] Excluding Indian jungle population, numbering 136 147 in 1926, 103 492 in 1936, 100 600 in 1941 and 56 705 in 1950.
[60] Reason for area change not ascertained.
[61] Areas covered by census only.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.
[53] Non compris les forçats, les militaires et les indiens groupés en tribus, s'élevant ensemble à 7 050 en 1936, à 1 516 en 1946 et à 1 988 en 1954.
[54] Population effectivement dénombrée. Le chiffre total de la population comprenant un ajustement de 50 067 unités pour compenser les lacunes du recensement et de 17 000 pour tenir compte des indiens de la jungle, est de 1 408 400 habitants.
[55] Territoire à la date du recensement, y compris pour 1862 et 1876, Arica (8 012 et 9 041 habitants respectivement) et Tarapacá (19 220 et 38 225 habitants respectivement).
[56] Population effectivement dénombrée; le chiffre total de la population, comprenant un ajustement de 465 144 unités pour compenser les lacunes du recensement et de 350 000 pour tenir compte des indiens de la jungle, est de 7 023 111.
[57] Non compris les indiens et nègres de l'intérieur, au nombre de 11 167 en 1921.
[58] Pour le district de Surinam seulement.
[59] Non compris les indiens de la jungle au nombre de 136 147 en 1926, de 103 492 en 1936, de 100 600 en 1941 et de 50 705 en 1950.
[60] Modification de la superficie non expliquée.
[61] Pour les territoires recensés seulement.

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[13] De *jure* population.

[61] Areas covered by census only.

[62] Partial result from multi-stage census; data are for 252 towns only, based on a 20 per cent sample.

[63] Second series: excluding non-resident military and shipping personnel, together numbering 36 606 in 1946.

[64] Excludes persons in military and special internment camps numbering 12 422.

[65] Excluding British Defence Forces numbering 9 278 in 1931.

[66] First series: pre-partition India, excluding Aden and Burma separated from India in 1932 and 1937 respectively. Second series: Republic of India, not including the settlements of Karikal, Mahé, Pondichéry and Yanaon, which became part of the Republic 1 November 1954, nor Kashmir-Jammu.

[67] Excludes also population of tribal areas of Assam, where the census could not be taken, and Chandernagor, which became part of India in 1950.

[68] Excludes also population of tribal areas of Assam where the census could not be taken.

[69] Excludes nomad population, estimated at 250 000.

[70] Jewish population only. Prior to 1948, Jewish population of Palestine.

[71] High rate of increase attributable in large part to Jewish immigration.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[13] Population de droit.

[61] Pour les territoires recensés seulement.

[62] Résultats partiels d'un recensement à plusieurs phases; les données se rapportent à 252 villes seulement et reposent sur un sondage à 20 pour cent.

[63] Deuxième série: non compris les militaires et les membres d'équipages de la marine marchande non résidents s'élevant ensemble à 36 606 en 1946.

[64] Non compris les personnes dans des camps militaires et dans des camps d'internement spéciaux au nombre de 12 422.

[65] Non compris les troupes britanniques s'élevant à 9 278 hommes en 1931.

[66] Première série: Inde avant le partage, non compris Aden et la Birmanie, détachées respectivement de l'Inde en 1932 et 1937. Deuxième série: République de l'Inde, non compris le Cachemire-Jammu et les colonies de Karikal, Mahé, Pondichéry et Yanaon, qui font partie de l'Inde depuis le 1er novembre 1954.

[67] Non compris également la zone de tribus d'Assam où il fut impossible d'effectuer un recensement et Chandernagor qui fait partie de l'Inde depuis 1950.

[68] Non compris également la zone de tribus d'Assam où il fut impossible d'effectuer un recensement.

[69] Non compris les nomades estimés à 250 000.

[70] Population juive seulement. Avant 1948, population juive de Palestine.

[71] Taux d'accroissement élevé dû en grande partie à l'immigration juive.

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[13] De *jure* population.

[72] Prewar data adjusted to exclude most of the territory no longer part of Japan. Excluding the Amami Islands acquired from the Ryukyu Islands between 1951 and 1953. Area changes for which specific explanation is not available have been disregarded in calculating intercensal rate of change.

[73] Includes armed forces outside country, estimated at 1 000 000.

[74] Civilian population, but includes a small number of military personnel living with their families.

[75] Civilian population excluding foreigners and, in 1946, those Koreans, Formosans and Ryukyans who stated that they wished to be repatriated. Estimated total population was 72 455 000 in 1945 and 74 024 000 in 1946.

[76] Adjusted for underenumeration due to flood conditions at time of census. Population actually enumerated is 78 098 364.

[77] Excludes Allied military and civilian personnel and their dependents.

[78] Korean population only.

[79] Excludes civilian aliens numbering 21 885 and alien armed forces within the country.

[80] First series: excluding former states of Johore, Kedah, Kelantan, Trengganu and Perlis not enumerated in 1901.

[81] Excludes transients afloat, non-resident military personnel and enemy prisoners of war, together numbering 14 735.

[82] Mongolian population only, in area excluding Kobdo district and the possessions of Bogdo-Gegen; total population unofficially estimated at 647 504 persons.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[13] Population de droit.

[72] Les données d'avant-guerre ont été ajustées afin d'exclure la plupart des territoires qui ne font plus partie du Japon. Non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953. On n'a pas tenu compte des modifications territoriales dont on ne connaît pas l'origine dans le calcul des taux.

[73] Y compris les forces armées hors du pays, estimées à 1 000 000 d'hommes.

[74] Population civile mais y compris un petit nombre de militaires vivant avec leur famille.

[75] Population civile, non compris les étrangers ainsi que, en 1946, les Coréens, Formosans et ressortissants des îles Ryû-Kyû qui ont déclaré vouloir être rapatriés. Le chiffre total de la population a été estimé à 72 455 000 en 1945 et à 74 024 000 en 1946.

[76] Chiffres ajustés pour compenser les lacunes du recensement attribuables aux inondations survenues au moment du dénombrement. La population effectivement dénombrée est de 78 098 364 habitants.

[77] Non compris les militaires et civils alliés ainsi que les membres de leur famille les accompagnant.

[78] Coréens seulement.

[79] Non compris les civils étrangers au nombre de 21 885 et les fo ces armées étrangères dans le pays.

[80] Première série: non compris les anciens états de Johore, de Kedah, de Kelantan, de Trengganu et de Perlis qui n'ont pas été recensés en 1901.

[81] Non compris les personnes à bord des navires, les militaires non résidents et les prisonniers de guerre ennemis, s'élevant ensemb'e à 14 735.

[82] Mongols seulement sur un territoire ne comprenant pas la région de Kobdo et les possessions de Bogdo-Gegen; l'estimation non officiel'e de la population totale est de 647 504 habitants.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.
[77] Excludes Allied military and civilian personnel and their dependents.
[83] First series: excluding Labuan acquired from Straits Settlements (Singapore) in 1946. Coverage incomplete before 1921.
[84] Excludes 1 442 transients and 66 members of the British armed forces.
[85] Excluding Kashmir-Jammu, Gilgit, Baltistan, Junagadh, Manavadar and large river areas in East Bengal.
[86] Territory formerly under British mandate.
[87] Excludes population of non-Christian tribes.
[88] First series: including the Amami Islands which reverted to Japan between 1951 and 1953. Second series: present territory, i.e., excluding the Amami Islands.
[89] Civilian population excluding foreigners.
[90] First series: including Labuan, transferred to North Borneo in 1946.
[91] Excluding Christmas and Cocos-Keeling Islands.
[92] Excludes transients afloat, non-resident military personnel and enemy prisoners of war, together numbering 36 015.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.
[77] Non compris les militaires et civils alliés ainsi que les membres de leur famille les accompagnant.
[83] Première série: non compris le Labuan détaché des Etablissements des Détroits (Singapour) en 1946. Données incomplètes avant 1921.
[84] Non compris 1 442 personnes de passage et 66 militaires britanniques.
[85] Non compris le Cachemire-Jammu, le Gilgit, le Baltistan, le Junagadh, le Manavadar et d'importantes régions fluviales dans le Bengale oriental.
[86] Territoire auparavant sous mandat britannique.
[87] Non compris les tribus non chrétiennes.
[88] Première série: y compris les îles Amami rendues au Japon entre 1951 et 1953. Deuxième série: territoire actuel, c'est-à-dire, non compris les îles Amami.
[89] Population civile à l'exclusion des étrangers.
[90] Première série: y compris le Labuan, rattaché à Bornéo du Nord en 1946.
[91] Non compris les îles de Christmas et Cocos-Keeling.
[92] Non compris les passagers à bord des navires, les militaires non résidents et les prisonniers de guerre ennemis, s'élevant ensemble à 36 015.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[13] *De jure* population.

[93] First series: excluding Hatay, acquired from Syria 29 June 1939.

[94] First series: excluding Burgenland, acquired from Hungary in 1920. Third series: *de jure* population.

[95] Change in territory result of minor border rectifications, completed in 1928.

[96] First series: excluding Eupen, Malmedy and Saint-Vith, ceded by Germany in 1925.

[97] First series: territory prior to World War I, i.e., including Southern Dobruja but excluding territory in south acquired in Balkan wars and retained after first World War. Second series: excluding Southern Dobruja, ceded by Romania in 1940.

[98] First series: territory prior to World War II, i.e., including Subcarpathia and a part of Slovakia ceded to USSR in 1947. Second series: present territory, but excluding Bratislava Bridgehead, ceded by Hungary in 1947.

[99] Excludes armed forces in Slovakia and Subcarpathia.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[13] Population de droit.

[93] Première série: non compris Hatay cédé par la Syrie le 29 juin 1939.

[94] Première série: non compris le Burgenland cédé par la Hongrie en 1920. Troisième série: population de droit.

[95] Les modifications territoriales provoquées par de petites rectifications de frontière, prirent fin en 1928.

[96] Première série: non compris Eupen, Malmédy et Saint-Vith cédés par l'Allemagne en 1925.

[97] Première série: territoire avant la Première Guerre mondiale, c'est-à-dire, y compris la Dobrouja méridionale mais non compris les territoires du sud acquis pendant les guerres balkaniques et conservés après la Première Guerre mondiale. Deuxième série: non compris la Dobrouja méridionale cédée par la Roumanie en 1940.

[98] Première série: territoire avant la Seconde Guerre mondiale, c'est-à-dire, y compris la région Subcarpatique et une partie de la Slovaquie cédées à l'URSS en 1947. Deuxième série: territoire actuel mais à l'exclusion de la tête de pont de Bratislava cédée par la Hongrie en 1947.

[99] Non compris les forces armées se trouvant en Slovaquie et dans la région Subcarpatique.

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[34] Second series: *de jure* population.

[100] First series: excluding South Jutland, ceded by Germany after World War I. Second series: *de facto* population of present territory. Third series: *de jure* population of present territory. Slight variations in area due to reclamation of land through construction of dykes etc.

[101] Prior to 1930: territory of the Grand-Duchy of Finland, which excluded Petsamo. First series: Finnish nationals only, including those outside country. Second series: Finnish nationals in Finland, including merchant seamen at sea. Comparability not affected by variations in area.

[102] Including Petsamo, the Karelian Isthmus and other small areas ceded to USSR 1940-1947.

[103] Including small areas ceded to USSR 1944-1947.

[104] First-fifth series: *de jure* population. Except for series 5 and 8, excluding communes of Tende and Brigue, ceded by Italy in 1947. First series: also excluding Nice and Savoy. Third and sixth series: also excluding Alsace-Lorraine.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[34] Deuxième série: population de droit.

[100] Première série: non compris le Jutland méridional cédé par l'Allemagne après la Première Guerre mondiale. Deuxième série: population de fait du territoire actuel. Troisième série: population de droit du territoire actuel. Les faibles variations de la superficie sont attribuables à des gains de terrains sur la mer à la suite de constructions de digues etc.

[101] Avant 1930, territoire du Grand-Duché de Finlande qui ne comprenait pas Petsamo. Première série: ressortissants finlandais seulement, y compris ceux hors du pays. Deuxième série: ressortissants finlandais en Finlande, y compris les équipages de la marine marchande en mer. Les variations de la superficie n'ont pas affecté la comparabilité des données.

[102] Y compris Petsamo, l'isthme de Carélie et les autres petites portions de territoires cédées à l'URSS de 1940 à 1947.

[103] Y compris les petites portions de territoire cédées à l'URSS de 1944 à 1947.

[104] Première à cinquième séries: population de droit. A l'exception de la cinquième et de la huitième série, non compris les communes de Tende et de Brigue cédées par l'Italie en 1947. Première série: non compris également Nice et la Savoie. Troisième série et sixième série: non compris également l'Alsace-Lorraine.

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[13] *De jure* population.

[104] First-fifth series: *de jure* population. Except for series 5 and 8, excluding communes of Tende and Brigue, ceded by Italy in 1947. First series: also excluding Nice and Savoy. Third and sixth series: also excluding Alsace-Lorraine.

[105] Excludes population of city of Bastia estimated at 40 000, and 38 000 persons not in their place of legal residence at time of census; also excludes members of the career military services and occupation personnel and their families in Germany and Austria, estimated at 187 000.

[106] Excludes an estimated 663 000 enemy prisoners of war.

[107] First and second series: territory of 1937 excluding the Saar. Third series: British, French, US and USSR zones of occupation, including Berlin. Second and third series: *de jure* population.

[108] Includes prisoners of war, civilian internees and refugees in transit camps, together numbering 384 323 for Germany, 133 327 for Eastern Germany, 247 240 for Western Germany, 3 756 for Berlin, 1 397 for East Berlin and 2 359 for West Berlin.

[109] Excluding Berlin, shown separately below.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[13] Population de droit.

[104] Première à cinquième séries: population de droit. A l'exception de la cinquième et de la huitième série, non compris les communes de Tende et de Brigue cédées par l'Italie en 1947. Première série: non compris également Nice et la Savoie. Troisième et sixième séries: non compris également l'Alsace-Lorraine.

[105] Non compris la ville de Bastia dont la population est estimée à 40 000 habitants, et 38 000 personnes ne se trouvant pas au lieu de leur résidence habituel au moment du recensement; non compris également les militaires de carrière et le personnel d'occupation en Allemagne et en Autriche ainsi que les membres de leur famille les accompagnant estimés à 187 000 personnes.

[106] Non compris les prisonniers de guerre ennemis estimés à 663 000.

[107] Première et deuxième séries: territoire de 1937, non compris la Sarre. Troisième série: zones d'occupation britannique, française, américaine et russe, y compris Berlin. Deuxième et troisième séries: population de droit.

[108] Y compris les prisonniers de guerre, les civils internés et les réfugiés dans des camps de passage s'élevant ensemble à 384 323 en Allemagne, à 133 327 en Allemagne Orientale, à 247 240 en Allemagne Occidentale, à 3 756 à Berlin, à 1 397 à Berlin-Est et à 2 359 à Berlin-Ouest.

[109] Non compris Berlin qui figure séparément ci-dessous.

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[110] Civilian population. Second series: excluding dependents of armed forces stationed in the area and persons accommodated in harbour shipping, numbering 1 123 and 208 respectively in 1931 and 1 439 and 479 respectively in 1951.

[111] First series: changing territory; major acquisitions were Ionian Islands in 1864; Thessaly in 1881; Macedonia, Epirus, Crete in 1913-1914; Thrace in 1919-1920. Part of the territory acquired in the Balkan Wars was ceded to Turkey in 1923. Second series: present territory, but excluding Dodecanese Islands, ceded by Italy in 1947.

[112] High rate of increase largely attributable to heavy influx of refugees from Asia Minor.

[113] Includes armed forces outside country and excludes alien armed forces within country.

[114] First and third series: *de jure* population.

[115] Civilian population.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[110] Population civile. Deuxième série: non compris les familles des militaires en garnison dans la région qui les accompagnent et les équipages des navires dans le port, s'élevant respectivement à 1 123 personnes et 208 personnes en 1931 et à 1 439 et 479 en 1951.

[111] Première série: territoire de l'époque. Principales acquisitions: îles Ioniennes en 1864; Thessalie en 1881; Macédoine, Epire, Crète en 1913-1914; Thrace en 1919-1920. Une partie du territoire acquis lors des guerres balkaniques fut cédé à la Turquie en 1923. Deuxième série: territoire actuel, non compris le Dodécanèse obtenu de l'Italie en 1947.

[112] Forte augmentation du taux due en grande partie à l'affluence de réfugiés d'Asie Mineure.

[113] Y compris les forces armées hors du pays, non compris les forces armées étrangères dans le pays.

[114] Première et troisième séries: population de droit.

[115] Population civile.

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[116] First-fourth series: *de jure* population. First and fifth series: excluding Free Territory of Trieste and territory ceded by Austria and Hungary after World War I. Second and sixth series: including Free Territory of Trieste (743 km²) and territories ceded to Yugoslavia and France in 1947. Third and seventh series: excluding that part of the former Free Territory of Trieste incorporated in 1954 and territory ceded to Yugoslavia and France in 1947.

[117] Includes military and civilian personnel outside country.

[118] Excluding non-Maltese members of armed forces stationed in the area and non-Maltese crews of merchant ships in harbour.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[116] Première à quatrième séries: population de droit. Première et cinquième séries: non compris le territoire libre de Trieste et le territoire cédé par l'Autriche et la Hongrie après la Première Guerre mondiale. Deuxième et sixième séries: y compris le Territoire libre de Trieste (743 km²) et les territoires cédés à la Yougoslavie et à la France en 1947. Troisième et septième séries: non compris la partie de l'ancien Territoire libre de Trieste attribuée à l'Italie en 1954 et le territoire cédé à la Yougoslavie et à la France en 1947.

[117] Y compris les militaires et civils hors du pays.

[118] Non compris les militaires non maltais en garnison dans la région et les équipages non maltais de navires marchands dans le port.

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[2] First series: *de jure* population.

[119] *De jure* population, excluding Elten and Tüddern (area 60 km²). Area excludes inland waters, but in 1920 and 1930 only those exceeding 75 hectares.

[120] First series: territory of 1923-1937, i.e., including areas ceded to USSR after World War II and excluding Danzig and areas formerly part of Germany.

[121] First series: the former principality excluding Dobruja. Second series: territory prior to Balkan Wars, i.e., excluding Banat and Transylvania.

[122] First and second series: territory defined by Treaty of Versailles. Second and third series: population present in area on census date, excluding those temporarily present.

[123] Excludes persons in military and labour camps.

[124] Excludes prisoners of war and civilian internees.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[2] Première série: population de droit.

[119] Population de droit, non compris Elten et Tüddern (60 km²). La superficie ne comprend pas les eaux intérieures sauf en 1920 et 1930 celles inférieures à 75 hectares.

[120] Première série: territoire de 1923-1937, c'est-à-dire, y compris les territoires cédés à l'URSS après la Seconde Guerre mondiale, et non compris Dantzig et les territoires qui faisaient auparavant partie de l'Allemagne.

[121] Première série: ancienne Principauté de Moldavie-Valachie, non compris la Dobroudja. Deuxième série: territoire antérieur aux guerres balkaniques, c'est-à-dire, non compris le Banat de Temesvar et la Transylvanie.

[122] Première et deuxième séries: territoire du Traité de Versailles. Deuxième et troisième séries: population sur le territoire actuel à la date du recensement, à l'exclusion des personnes temporairement présentes.

[123] Non compris les personnes se trouvant dans des camps militaires ou de travail.

[124] Non compris les prisonniers de guerre et les internés civils.

* Provisional.

[1] Rates are not computed between censuses covering less than total population, or where intercensal comparability in type of census, geographic areas, or ethnic coverage appears to be lacking.

[27] *De jure* population, but including US armed forces stationed in the area.

[125] First series: excluding territory ceded by Italy in 1947. Second and third series: excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in 1954. Third and fourth series: *de jure* population.

[126] First series: excluding Swains Island, annexed in 1925.

[127] Excluding full-blooded aborigines, estimated at 60 000 in 1921 and 1933 and 47 000 in 1944.

* Provisoire.

[1] Aucun taux n'a été calculé entre les recensements ayant porté sur une partie seulement de la population ou, lorsque la nature des recensements, les territoires, ou les groupes ethniques mis en parallèle ne permettent pas d'établir de comparaisons valables.

[27] Population de droit, mais y compris les forces armées américaines en garnison dans la région.

[125] Première série: non compris le territoire cédé par l'Italie en 1947. Deuxième et troisième séries: non compris Koper et Buje qui constituent la partie de l'ancien Territoire libre de Trieste attribuée à la Yougoslavie en 1954. Troisième et quatrième séries: population de droit.

[126] Première série: non compris l'île de Swain annexée en 1925.

[127] Non compris les purs aborigènes, estimés à 60 000 en 1921 et en 1933 et à 47 000 en 1944.

* Provisional.
[1] *De jure* population.
[2] Mafeking, the seat of government, is located in the Union of South Africa.
[3] Reason for slight discrepancy between this and corresponding figure shown elsewhere not ascertained.
[4] Excluding nomad population numbering 55 073, enemy prisoners of war and alien armed forces within country.
[5] Including an estimated 219 000 persons in Northern Frontier Province and Rift Valley only partially covered by census, but excluding armed forces, 4 137 persons in transit and 188 Polish refugees in camps.
[6] Including 215 European military personnel and 56 crew members and passengers on ships in harbour.

* Provisoire.
[1] Population de droit.
[2] Mafeking, siège du gouvernement, se trouve en Union Sud-Africaine.
[3] L'origine de la légère disparité entre cette donnée et le chiffre correspondant publié ailleurs n'a pu être déterminée.
[4] Non compris 55 073 nomades, prisonniers de guerre ennemis et forces armées étrangères dans le pays.
[5] Y compris 219 000 personnes environ dans la province frontalière du Nord et la vallée du Rift qui ont été recensées en partie seulement, mais non compris les forces armées, 4 137 personnes de passage et 188 réfugiés polonais dans des camps.
[6] Non compris 215 militaires européens et 56 membres d'équipages et passagers de navires dans le port.

* Provisional.
[1] *De jure* population.
[34] Excluding Indian jungle population, numbering 56 705.
[35] Excluding non-resident military and shipping personnel, numbering 36 606 in 1946.
[36] Excluding Taiwan.
[37] Excluding persons in military and special internment camps, numbering 12 422.
[38] Excluding settlements of Karikal, Mahé, Pondichéry and Yanaon which became part of India in November 1954, and Kashmir-Jammu and the tribal areas of Assam, where the census could not be taken.
[39] Consideration is being given (1955) to the reconstitution of the 29 States into a smaller number of administrative units.
[40] Jewish population only.
[41] Includes 17 117 persons not distributed by districts.

* Provisoire.
[1] Population de droit.
[34] Non compris les indiens de la jungle au nombre de 56 705.
[35] Non compris les militaires et les membres d'équipage de la marine marchande non résidents, au nombre de 36 606 en 1946.
[36] Non compris Taïwan.
[37] Non compris les personnes dans des camps militaires et d'internement spéciaux, au nombre de 12 422.
[38] Non compris les comptoirs de Karikal, Mahé, Pondichéry et Yanaon qui font partie de l'Inde depuis novembre 1954 et le Cachemire-Jammu et la Zone de tribus d'Assam, où on n'a pu effectuer de recensement.
[39] On est en train d'étudier (1955) le regroupement des 29 états en un plus petit nombre de divisions administratives.
[40] Population juive seulement.
[41] Y compris 17 117 personnes non réparties par district.

[1] De jure population.
[42] Excluding the Amami Islands acquired from the Ryukyu Islands between 1951 and 1953. Small outlying islands are included in the prefectural data.
[43] Civilian population, excluding foreigners.
[44] Excluding foreigners and those Koreans, Formosans and Ryukyuans who stated that they wished to be repatriated.
[45] Excluding Allied military and civilian personnel and their dependents.
[46] Adjusted for underenumeration due to flood conditions at time of census.

[1] Population de droit.
[42] Non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953. Les îlots périphériques sont compris dans les données préfectorales.
[43] Population civile, non compris les étrangers.
[44] Non compris les étrangers, les Coréens, Formosans et les ressortissants des îles Ryû-Kyû qui ont déclaré vouloir être rapatriés.
[45] Non compris les militaires et civils alliés ainsi que les membres de leur famille les accompagnant.
[46] Données ajustées pour compenser les lacunes du recensement attribuables aux inondations au moment du dénombrement.

[1] *De jure* population.
[42] Excluding the Amami Islands acquired from the Ryukyu Islands between 1951 and 1953. Small outlying islands are included in the prefectural data.
[47] Excluding military personnel and their families living on military installations.
[48] *De jure* population, but including 21 885 civilian aliens.
[49] Excluding unlocated persons, transients afloat, non-resident military personnel and enemy prisoners of war, together numbering 16 822.
[50] Excluding 1 442 transients and 66 members of the British armed forces.
[51] Excluding Kashmir-Jammu, Gilgit, Baltistan, Junagadh and Manavadar.
[52] As of 14 October 1955 the 9 civil divisions given below were merged into 2 provinces, East Pakistan and West Pakistan.

[1] Population de droit.
[42] Non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953. Les îlots périphériques sont compris dans les données prefectorales.
[47] Non compris les militaires et leurs familles vivant dans des baraquements de l'armée.
[48] Population de droit, mais y compris 21 885 civils étrangers.
[49] Non compris les personnes dont la résidence est inconnue, celles qui se trouvent à bord des navires, les militaires non résidents, et les prisonniers de guerre ennemis s'élevant ensemble à 16 822.
[50] Non compris 1 442 personnes de passage et 66 militaires britanniques.
[51] Non compris le Cachemire-Jammu, le Gilgit, le Baltistan, le Junagadh et le Manavadar.
[52] Les deux provinces du Pakistan-Est et du Pakistan-Ouest ont été constituées le 14 octobre 1955 à partie des 9 divisions administratives indiquées ci-dessous.

[1] *De jure* population.

[54] Regions were replaced in 1951 by 12 provinces, namely: Blagoevgrad, Burgas, Haskovo, Kolarovgrad, Pleven, Plovdiv, Ruse, Sofia, Stalin, Stara Zagora, Tirnovo, and Vratsa.

[55] Excluding Bratislava Bridgehead, ceded by Hungary in 1947, with a population numbering 3 379 in 1941.

[56] Provinces were replaced 12 December 1948 by regions (*Kraje*), which are as follows: Banská Bistrica, Bratislava, Brno, Česke Budějovice, Gottwaldov, Hradec Králove, Jihlava, Karlovy Vary, Košice, Liberec, Nitra, Pardubice, Praha, Pizeň, Prešov, Olomouc, Ostrava, Usti N. Labem, and Žilina.

[1] Population de droit.

[54] Les régions ont été remplacées en 1951 par les 12 provinces ci-après: Blagoevgrad, Burgas, Haskovo, Kolarovgrad, Pleven, Plovdiv, Ruse, Sofia, Stalin, Stara Zagora, Tirnovo et Vratsa.

[55] Non compris la tête de pont de Bratislava, cédée par la Hongrie en 1947, et dont la population était de 3 379 personnes en 1941.

[56] Les provinces ont été remplacées le 12 décembre 1948 par des régions (*Kraje*) qui sont les suivantes: Banská Bistrica, Bratislava, Brno, Česke Budějovice, Gottwaldov, Hradec Králove, Jihlava, Karlovy Vary, Košice, Liberec, Nitra, Pardubice, Praha, Pizeň, Prešov, Olomouc, Ostrava, Usti N. Labem et Žilina.

[1] *De jure* population.
[69] Units are geographical counties which are not in all cases civil divisions.
[70] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954, with a population estimated at 62 725 in 1953.

[1] Population de droit.
[69] Les unités sont des comtés géographiques qui ne correspondent pas toujours à des divisions administratives.
[70] Non compris Koper et Buje, qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954 et dont la population était estimée à 62 725 personnes en 1953.

[1] De *jure* population.
[8] De *jure* population, but including US armed forces stationed in the area.
[39] Population actually enumerated, i.e., excluding adjustment for under-enumeration.
[40] Urban area of Federal Capital, the total population of which numbers 2 982 580.
[41] Includes urban agglomerations of Adrogue, Avellaneda, Lanús, Lomas de Zamora, Morón, Quilmes, San Fernando, San Isidro, San Justo, San Martín, Tigre and Vicente Lopez.
[42] Included in urban agglomeration of Buenos Aires.
[43] Data include adjustment for omissions, 4.5 per cent for Sucre and 20.4 per cent for La Paz.
[44] Each city is comprised of the urban and suburban zones of its district.
[45] Includes three rural sectors.

[1] Population de droit.
[8] Population de droit, mais y compris les forces armées américaines en garnison dans la région.
[39] Population effectivement dénombrée, c'est-à-dire, non compris un ajustement pour compenser les lacunes du recensement.
[40] Région urbaine de la Capitale Fédérale dont la population totale est de 2 982 580 habitants.
[41] Y compris les agglomérations urbaines d'Adrogue, d'Avellaneda, de Lanús, de Lomas de Zamora, de Morón, de Quilmes, de San Fernando, de San Isidro, de San Justo, de San Martín, de Tigre et de Vicente Lopez.
[42] Englobée dans l'agglomération urbaine de Buenos Aires.
[43] Les données comprennent un ajustement pour tenir compte des omissions (4,5 pour cent pour Sucre et 20,4 pour cent pour La Paz).
[44] Chaque ville est formée de la zone urbaine et suburbaine de son district.
[45] Y compris trois secteurs ruraux.

6. Population of capital city and cities of 100 000 or more inhabitants (continued)

Population des capitales et des villes de 100 000 habitants au moins (suite)

[1] *De jure* population.

[59] Data for cities proper refer to communes which may include some rural population while excluding parts of the agglomeration in neighbouring communes.

[60] Department of Seine, which comprises only a part of Greater Paris.

[61] For population of East Berlin, the capital, see below.

[62] Excluding prisoners of war, civilian internees, and refugees in transit camps, together numbering 133 327 for Eastern Germany, 247 240 for Western Germany, 3 756 for Berlin, 1 397 for East Berlin and 2 359 for West Berlin.

[1] Population de droit.

[59] Les données relatives aux villes proprement dites se rapportent à la population totale de la commune, et peuvent comprendre une certaine population rurale tout en excluant quelques parties de l'agglomération touchant aux communes avoisinantes.

[60] Département de la Seine, qui n'est qu'une partie de la région parisienne.

[61] Voir ci-dessous la population de Berlin-Est, qui est la capitale.

[62] Non compris les prisonniers de guerre, les internés civils, et les réfugiés de passage dans les camps s'élevant ensemble à 133 327 en Allemagne orientale, 274 240 en Allemagne Occidentale, 3 756 à Berlin (1 397 pour Berlin-Est et 2 359 pour Berlin-Ouest).

6. Population of capital city and cities of 100 000 or more inhabitants (continued)

Population des capitales et des villes de 100 000 habitants au moins (suite)

[1] *De jure* population.
[73] West Yorkshire conurbation, of which Leeds is the nucleus. Includes urban agglomerations of Bradford and Huddersfield.
[74] Included in urban agglomeration of Leeds.
[75] Tyneside conurbation, of which Newcastle upon Tyne is the nucleus. Includes urban agglomeration of Gateshead and South Shields.
[76] Included in urban agglomeration of London.
[77] Included in urban agglomeration of Manchester.
[78] Included in urban agglomeration of Birmingham.
[79] Included in urban agglomeration of Liverpool.
[80] Included in urban agglomeration of Newcastle upon Tyne.
[81] Central Clydeside conurbation, of which Glasgow is the nucleus.

[1] Population de droit.
[73] Ensemble urbain du Yorkshire de l'ouest dont Leeds est le centre. Comprend les agglomérations urbaines de Bradford et d'Huddersfield.
[74] Englobée dans l'agglomération urbaine de Leeds.
[75] Ensemble urbain du Tyneside, dont Newcastle-upon-Tyne est le centre. Y compris les agglomérations urbaines de Gateshead et South Shields.
[76] Englobée dans l'agglomération londonienne.
[77] Englobée dans l'agglomération de Manchester.
[78] Englobée dans l'agglomération de Birmingham.
[79] Englobée dans l'agglomération de Liverpool.
[80] Englobée dans l'agglomération de Newcastle-upon-Tyne.
[81] Ensemble urbain du Clydeside Central dont Glasgow est le centre.

6. Population of capital city and cities of 100 000 or more inhabitants (continued)

Population des capitales et des villes de 100 000 habitants au moins (suite)

* Provisional.
[8] De *jure* population.
[24] Population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.
[25] Including adjustment of 314 866 for underenumeration and estimated tribal Indian population.
[26] Excluding Indian jungle population and 31 960 schedules not tabulated by urban and rural.
[27] Preliminary tabulation based on a 2 per cent sample of census returns. Urban and rural distribution based on characteristics of enumeration districts (see definition in last column).
[28] Population actually enumerated, but excluding 12 881 schedules not tabulated by urban and rural. Excluding also 17 000 for Indian jungle population and adjustment of 50 067 for underenumeration.

* Provisoire.
[8] Population de droit.
[24] Population effectivement dénombrée, c'est-à-dire, non compris un ajustement de 1 pour cent pour compenser les lacunes du recensement.
[25] Y compris un ajustement de 314 866 unités pour compenser des lacunes du recensement et tenir compte des Indiens groupés en tribus.
[26] Non compris les indiens de la jungle et 31 960 questionnaires qui n'ont pas été exploités d'après les caractéristiques urbaines et rurales de la population.
[27] Données fournies par une exploitation préliminaire fondée sur un sondage à 2 pour cent des réponses au questionnaire de recensement. La répartition de la population en population urbaine et population rurale repose sur les caractéristiques des districts de recensement (voir définition dans la dernière colonne).
[28] Population effectivement dénombrée, mais non compris 12 881 questionnaires qui n'ont pas été exploités d'après les caractéristiques urbaines et rurales de la population. Non compris également 17 000 indiens de la jungle et un ajustement de 50 067 unités pour compenser des lacunes du recensement.

* Provisional.
[1] Excluding Southern Territories with population numbering 816 993.
[2] *De jure* population, but excluding 77 701 persons in institutions.
[3] African population only.
[4] Excluding nomad population numbering 55 073, enemy prisoners of war, and alien armed forces within country.
[5] Including data for British Togoland.
[6] Excluding 215 European military personnel and 56 crew members and passengers on ships in harbour.
[7] Administrative centres of communes.
[8] Villages.
[9] Towns and villages.
[10] Communes.
[11] For localities over 10 000.
[12] For localities of 1 500–10 000 population.
[13] For localities under 1 500 population.
[14] African population only, based on a sample census.
[15] European, Coloured and Asian population and natives in employment.
[16] Former mandated territory (Union of South Africa).
[17] Main European towns including all neighbouring mines, locations and compounds.
[18] Principal towns and villages described as: urban municipalities, urban townships, urban villages, rural suburbs and rural townships.
[19] Towns, villages and townships.
[20] Major cities, the parent municipality and the suburbs adjoining, towns, villages and townships.

8. Population selon l'importance des localités et le sexe aux différents recensements effectués de 1945 à 1954

[Les localités sont classées de la façon suivante: a — agglomérations pour lesquelles on ne tient pas compte des limites officielles; b — localités aux limites définies, dotées d'une forme quelconque d'administration locale ou "urbaine"; c — subdivisions administratives secondaires ou du dernier degré, aux limites définies, et dont l'ensemble couvre le pays tout entier. Voir explications à la page 63.]

* Provisoire.
[1] Non compris les Territoires du Sud avec une population de 816 993 habitants.
[2] Population de droit, mais non compris 77 701 personnes faisant partie de la population comptée à part.
[3] Population africaine seulement.
[4] Non compris les nomades au nombre de 55 073, les prisonniers de guerre ennemis et les forces armées étrangères dans le pays.
[5] Y compris le Togo britannique.
[6] Non compris 215 militaires ouropéens et 56 membres d'équipages et passagers de navires dans le port.
[7] Chefs-lieux de communes.
[8] Villages.
[9] Villes et villages.
[10] Communes.
[11] Localités de plus de 10 000 habitants.
[12] Localités de 1 500 à 10 000 habitants.
[13] Localités ayant moins de 1 500 habitants.
[14] Population africaine seulement; recensement par sondage.
[15] Européens, métis, population d'origine asiatique et indigènes ayant un emploi.
[16] Territoire auparavant sous mandat (Union Sud-Africaine).
[17] Principales villes européennes, y compris les mines, réserves et compounds avoisinants.
[18] Principales villes et principaux villages officiellement connus sous les noms de: municipalités urbaines, communes urbaines, villages urbains, faubourgs ruraux et communes rurales.
[19] Villes, villages et communes.
[20] Villes principales, c'est-à-dire les centres municipaux et leurs faubourgs, villes, villages et communes.

8. Population by size of locality and sex (continued)

[Localities are classified by type as follows: Agglomerations without regard to fixed boundaries (code a); places with fixed boundaries, commonly under the jurisdiction of local or "urban" forms of government (code b); relatively small or smallest administrative subdivisions having fixed boundaries and, in sum, comprising the entire country (code c]. For discussion, see page 17.]

* Provisional.
[7] Administrative centres of communes.
[10] Communes.
[23] *De jure* population, but including US armed forces stationed in the area.
[30] *De jure* population.
[34] Administrative centres of *municipios*.
[35] *De jure* population, excluding 84 diplomatic personnel outside country.
[36] Population actually enumerated, i.e., excluding 10 per cent adjustment for underenumeration.
[37] Administrative centres of districts and *municipios*.
[38] Reason for discrepancy between this and corresponding figure shown in Table 7 not ascertained.
[39] Excluding Canal Zone shown separately above.
[40] *De jure* population, but excluding armed forces outside continental United States and civilian citizens absent from the country for extended periods of time.
[41] Incorporated towns and villages.
[42] Administrative centres of districts.
[43] Cities, towns and villages of 500 or more inhabitants.
[44] Cities, towns and wards.
[45] Incorporated and unincorporated places of 1 000 or more inhabitants.
[46] Persons on ships.
[47] For localities of 25 000—49 999 inhabitants.
[48] For localities of 10 000—24 999 inhabitants.
[49] For localities of 2 500—4 999 inhabitants.
[50] For localities of 1 000—2 499 inhabitants.

8. Population selon l'importance des localités et le sexe (suite)

[Les localités sont classées de la façon suivante: **a** — agglomérations pour lesquelles on ne tient pas compte des limites officielles; **b** — localités aux limites définies, dotées d'une forme quelconque d'administration locale ou "urbaine"; **c** — subdivisions administratives secondaires ou du dernier degré, aux limites définies, et dont l'ensemble couvre le pays tout entier. Voir explications à la page 63.]

* Provisoire.
[7] Chefs-lieux de communes.
[10] Communes.
[23] Population de droit, mais y compris les forces armées américaines en garnison dans la région.
[30] Population de droit.
[34] Chefs-lieux de *municipios*.
[35] Population de droit, non compris 84 membres du corps diplomatique hors du pays au moment du recensement.
[36] Population effectivement dénombrée, c'est-à-dire, non compris un ajustement de 10 pour cent pour compenser les lacunes du recensement.
[37] Chefs-lieux de districts et de *municipios*.
[38] L'origine de la disparité entre cette donnée et le chiffre correspondent publié dans le tableau 7 n'a pu être déterminée.
[39] Non compris la Zone du Canal qui figure séparément ci-dessus.
[40] Population de droit, mais con compris les membres des forces armées hors des Etats-Unis continentaux et les civils absents du pays pour de longues périodes.
[41] Villes érigées en municipalités et villages.
[42] Chefs-lieux de districts.
[43] Villes et villages de 500 habitants au moins.
[44] Villes et arrondissements.
[45] Localités érigées en municipalités et autres de 1 000 habitants au moins.
[46] Personnes à bord des navires.
[47] Localités de 25 000 à 49 999 habitants.
[48] Localités de 10 000 à 24 999 habitants.
[49] Localités de 2 500 à 4 999 habitants.
[50] Localités de 1 000 à 2 499 habitants.

8. Population by size of locality and sex (continued)

[Localities are classified by type as follows: Agglomerations without regard to fixed boundaries (code a); places with fixed boundaries, commonly under the jurisdiction of local or "urban" forms of government (code b); relatively small or smallest administrative subdivisions having fixed boundaries and, in sum, comprising the entire country (code c). For discussion, see page 17.]

[10] Communes.
[30] *De jure* population.
[34] Administrative centres of *municipios*.
[51] Population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.
[52] Excluding Indian jungle population and 31 960 schedules not tabulated by size of localities.
[53] Excludes 1 321 for tribal Indians not distributed by size of localities.
[54] Population actually enumerated, but excluding 12 881 schedules not tabulated by size of localities. Excluding also 17 000 for Indian jungle population and adjustment of 50 067 for underenumeration.
[55] Incorporated urban areas.
[56] Agglomerations which have urban characteristics.
[57] Urban and suburban population of *cidade* and *vila*, i.e., administrative centres of municipal government.
[58] Capital of each province and canton.
[59] Discrepancy of 7 112 between this and urban population in Table 7 is due to exclusion of *cidades* and *vilas* in territory in dispute between States of Espírito Santo and Minas Gerais.
[60] Excluding Indian jungle population, numbering 56 705.
[61] Colony only, but excluding Perim.
[62] Excluding non-resident military and shipping personnel, numbering 36 606.
[63] Excluding persons in military and special internment camps, numbering 12 422.
[64] Excluding Kashmir-Jammu and tribal areas of Assam, where census could not be taken, and settlements of Karikal, Mahé, Pondichéry and Yanaon, which became part of India 1 November 1954.
[65] Populated centres, i.e., cities, towns, *caserios*, *aldeas*, and *vencindarios*, petroleum and mine camps, *haciendas*, *fundos*, *hatos*, plantations, etc.
[66] Municipal urban council areas and local board areas.

8. Population selon l'importance des localités et le sexe (suite)

[Les localités sont classées de la façon suivante: **a** — agglomérations pour lesquelles on ne tient pas compte des limites officielles; **b** — localités aux limites définies, dotées d'une forme quelconque d'administration locale ou "urbaine"; **c** — subdivisions administratives secondaires ou du dernier degré, aux limites définies, et dont l'ensemble couvre le pays tout entier. [10] Communes.
[30] Population de droit.
[34] Chefs-lieux de *municipios*.
[51] Population effectivement dénombrée, c'est-à-dire, non compris un ajustement de 1 pour cent pour compenser les lacunes du recensement.
[52] Non compris les indiens de la jungle et 31 960 questionnaires qui n'ont pas été répartis par importance des localités.
[53] Non compris 1 321 indiens groupés en tribus non répartis par localités.
[54] Population effectivement dénombrée, mais non compris 12 881 questionnaires qui n'ont pas été répartis par importance des localités. Non compris également 17 000 indiens de la jungle et un ajustement de 50 067 unités pour compenser les lacunes du recensement.
[55] Zones urbaines érigées en municipalités.
[56] Agglomérations de caractère urbain.
[57] Population urbaine et suburbaine des *cidades* et *vilas*, c'est-à-dire, chefs-lieux d'administrations municipales.
[58] Capitale de chaque province et canton.
[59] La différence de 7 112 unités entre ce chiffre et celui de la population urbaine du tableau 7 est due à l'exclusion des *cidades* et *vilas* sur un territoire en litige entre les états d'Espírito Santo et de Minas Gerais.
[60] Non compris les indiens de la jungle, au nombre de 56 705.
[61] Colonies seulement, à l'exclusion de Perim.
[62] Non compris les militaires et membres d'équipages de la marine marchande non résidents, au nombre de 36 606.
[63] Non compris les personnes dans des camps militaires et les camps d'internement spéciaux s'élevant à 12 422.
[64] Non compris le Cachemire-Jammu et la zone du tribu d'Assam, où il fut impossible d'effectuer un recensement, ainsi que les comptoirs de Karikal, Mahé, Pondichéry et Yanaon qui font partie de l'Indie depuis le 1er novembre 1954.
[65] Centres à population dense, c'est-à-dire, villes, *caserios*, *aldeas*, et *vencindarios*, exploitations pétrolifères, mines, *haciendas*, *fundos*, *hatos*, plantations, etc.
[66] Zones dotées d'un conseil municipal urbain et celles avec des comités locaux d'administration.

8. Population by size of locality and sex (continued)

[Localities are classified by type as follows: Agglomerations without regard to fixed boundaries (code a); places with fixed boundaries, commonly under the jurisdiction of local or "urban" forms of government (code b); relatively small or smallest administrative subdivisions having fixed boundaries and, in sum, comprising the entire country (code c). For discussion, see page 17.]

* Provisional.

[66] De *jure* population.

[67] Excluding Amami Islands, acquired from Ryukyu Islands between 1951 and 1953.

[68] Data include adjustment for omission of military personnel and foreigners.

[69] Excluding foreigners and those Koreans, Formosans and Ryukyuans who stated that they wished to be repatriated.

[70] Adjusted for underenumeration due to flood conditions at time of census.

[71] Excluding Allied military and civilian personnel and their dependents.

[72] Excluding transients afloat, non-resident military personnel and enemy prisoners of war numbering 14 735.

[73] Cities *(shi)*, towns *(cho* or *machi)* and townships *(son* or *mura)*.

[74] Including 12 723 persons in immigrant reception centres.

[75] Including the 3 Amami Islands which reverted to Japan 25 December 1953.

[76] Chief towns.

8. Population selon l'importance des localités et le sexe (suite)

[Les localités sont classées de la façon suivante: **a** — agglomérations pour lesquelles on ne tient pas compte des limites officielles; **b** — localités aux limites définies, dotées d'une forme quelconque d'administration locale ou "urbaine"; **c** — subdivisions administratives secondaires ou du dernier degré, aux limites définies, et dont l'ensemble couvre le pays tout entier. Voir explications à la page 63.]

* Provisional.
[10] Communes.
[29] Towns.
[30] *De jure* population.
[38] Reason for discrepancy between this and corresponding figure shown in Table 7 not ascertained.
[85] Uninhabited.
[93] Excluding non-Maltese armed forces stationed in the area and non-Maltese crews of merchant ships in harbour.
[94] Excluding villages of Elten and Tüddern, ceded by Germany in 1949, with a population estimated at 9 000 at time of transfer.
[95] Clusters, i.e., areas with closely spaced housing of the administrative municipalities and environs.
[96] Agglomerations of at least 20 inhabited houses or 100 inhabitants.
[97] Communities of 2 000 or more inhabitants.
[98] Includes 304 322 persons not classified as being in any locality.
[99] Population present in area, but excluding those temporarily present.
[100] *Municipios*.
[101] Densely populated places with at least 200 inhabitants either within or outside towns, boroughs, and *municipalsamhällen*.
[102] Conurbations, other urban areas, and civil parishes in rural districts outside conurbations.
[103] For localities of 100-499 inhabitants.
[104] For localities of under 100 inhabitants.

8. Population selon l'importance des localités et le sexe (suite)

[Les localités sont classées de la façon suivante: a — agglomérations pour lesquelles on ne tient pas compte des limites officielles; b — localités aux limites définies, dotées d'une forme quelconque d'administration locale ou "urbaine"; c — subdivisions administratives secondaires ou du dernier degré, aux limites définies, et dont l'ensemble couvre le pays tout entier. Voir explications à la page 63.]

* Provisoire.
[10] Communes.
[29] Villes.
[30] Population de droit.
[38] L'origine de la disparité entre cette donnée et le chiffre correspondent publié dans le tableau 7 n'a pu être déterminée.
[85] Localités inhabitées.
[93] Non compris les militaires non maltais en garnison dans la région et les membres non maltais d'équipages de navires marchands dans le port.
[94] Non compris les villages d'Elten et de Tüddern cédés par l'Allemange en 1949 avec une population estimée à 9 000 habitants au moment du transfert.
[95] Agglomérations, c'est-à-dire, zones de développements urbains des municipalités et leurs environs.
[96] Agglomérations ayant au moins 20 maisons habitées ou 100 habitants.
[97] Communautés de 2 000 habitants au moins.
[98] Y compris 304 322 personnes qui n'ont été classées dans aucune localité.
[99] Population présente sur le territoire actuel, à l'exclusion des personnes temporairement présentes.
[100] *Municipios.*
[101] Centres à population trés dense ayant au moins 200 habitants soit dans les limites ou à l'extérieur des villes, municipalités, et *municipalsamhällen.*
[102] Ensemble d'agglomérations, autres zones urbaines, et paroisses civiles dans des districts ruraux hors des agglomérations.
[103] Localités de 100 à 499 habitants.
[104] Localités ayant moins de 100 habitants.

8. Population by size of locality and sex (continued)

[Localities are classified by type as follows: Agglomerations without regard to fixed boundaries (code a); places with fixed boundaries, commonly under the jurisdiction of local or "urban" forms of government (code b); relatively small or smallest administrative subdivisions having fixed boundaries and, in sum, comprising the entire country (code c). For discussion, see page 17.]

* Provisoire.
[8] Villages.
[9] Villes et villages.
[23] Population de droit, mais y compris les forces armées américaines en garnison dans la région.
[30] Population de droit.
[105] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954, avec une population estimée à 62 725 habitants en 1953.
[106] Villes, bourgs et villages de 1 000 habitants au moins.
[107] Iles.
[108] Non compris 239 personnes du sexe masculin se trouvant à Makatea, Océanie française.
[109] Pour l'île de Swains.
[110] Une ville, 19 villages.
[111] Villes et villages.
[112] Groupements de population, municipalités et villes de districts, ayant une forme quelconque d'administration locale.

9. Population by size of household : each census, 1945 – 1954

[1] Excluding nomad population numbering 55 073, enemy prisoners of war and alien armed forces within country.
[2] Excluding 215 European military personnel and 56 crew members and passengers on ships in harbour.
[3] Non-Moroccan population.
[4] Moroccan Jewish only.
[5] *De jure* population.
[6] Includes 456 private households of unknown size.
[7] Includes 660 persons in private households of unknown size.
[8] *De jure* population, but including US armed forces stationed in the area.
[9] Civilian population, but excluding 1 127 transients and visitors in hotels, guest houses and similar institutions.
[10] Excluding Yukon and Northwest Territories.
[11] Distribution of private households based on a 20 per cent sample of all dwellings.
[12] Reason for slight discrepancy between this and corresponding figure shown elsewhere is errors in data processing.
[13] Approximation based on the average number of persons per household.

9. Population selon la dimension des ménages aux différents recensements effectués de 1945 à 1954

[5] Population de droit.

[18] Non compris les Amérindiens des districts éloignés, au nombre de 6 023.

[19] Population effectivement dénombrée, mais non compris 12 881 questionnaires qui n'ont pas été répartis d'après la dimension des ménages. Non compris également 17 000 indiens de la jungle et un ajustement de 50 067 unités pour compenser les lacunes du recensement.

[20] Non compris les indiens de la jungle au nombre de 56 705.

[21] Non compris 12 422 personnes dans des camps militaires et des camps spéciaux d'internement.

[22] Données reposant sur un sondage à 1 pour cent des réponses au questionnaire de recensement.

[23] Non compris les îles Amami détachées des îles Ryû-Kyû entre le 5 décembre 1951 et le 25 décembre 1953.

[24] Non compris les passagers à bord des navires, les militaires non résidents et les prisonniers de guerre ennemis.

[25] Ressortissants des îles Ryû-Kyû seulement, sur un territoire comprenant les îles Amami rendues au Japon le 25 décembre 1953.

[26] Non compris les domestiques sans liens de parenté avec la famille qui les emploie, les invités, les pensionnaires, les personnes de passage, etc., vivant dans le ménage.

[27] C'est-à-dire 60 775 personnes dans des institutions et 412 330 personnes travaillant dans des plantations.

[28] C'est-à-dire 5 002 vagabonds, 2 616 personnes à bord de navires et 29 648 aborigènes nomades.

¶ For estimate by age and sex, see Part B beginning page 266.

[1] Age classification based on year of birth rather than on completed years of age.

[2] Excluding military personnel in barracks.

[3] African population only.

[4] Including population of Mafeking, the capital, which is located in the Union of South Africa, and civilian nationals working outside Territory, together numbering 14 401.

[5] Reason for slight discrepancies between this and corresponding figure shown elsewhere not ascertained.

[6] Excluding nomad population numbering 55 073, enemy prisoners of war, and alien armed forces within country.

[7] Under 2 years.

[8] 2-6 years.

[9] 7-14 years.

10. Population par groupes d'âge quinquennaux et par sexe : recensements effectués de 1945 à 1954 et dernière estimation

Partie A — Population dénombrée

[Voir la page 67 pour une appréciation de la qualité des dénombrements; voir le tableau 1 et les pages 55 et 68 pour une évaluation des estimations de population de 1954.]

¶ Pour une estimation de la population par âge et par sexe, voir la Partie B commençant à la page 266.

[1] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.

[2] Non compris les militaires dans les casernes.

[3] Population africaine seulement.

[4] Y compris la population de Mafeking, la capitale, située en Union Sud-Africaine, et les civils nationaux travaillant hors du territoire, s'élevant ensemble à 14 401 personnes.

[5] L'origine des légères disparités entre cette donnée et le chiffre correspondant publié ailleurs n'a pu être déterminée.

[6] Non compris les nomades au nombre de 55 073, les prisonniers de guerre ennemis et les forces armées étrangères dans le pays.

[7] Moins de 2 ans.

[8] 2 à 6 ans.

[9] 7 à 14 ans.

10. Population by 5-year age groups and sex (continued)

Part A — Enumerated population (continued)

[5] L'origine des légères disparités entre cette donnée et le chiffre correspondant publié ailleurs n'a pu être déterminée.
[21] De 1 an à l'âge de la puberté.
[22] Au-dessus de l'âge de la puberté.
[23] Population africaine; recensement par sondage. Non compris les personnes employées dans les entreprises européennes au nombre de 325 300.
[24] Chiffre très au-dessous de la réalité.
[25] Territoire auparavant sous mandat (Union Sud-Africaine).
[26] Non compris les métis et les indigènes hors de la zone de police, au nombre de 183 833.
[27] Population blanche du territoire et population indigène de Fernando-Póo.
[28] 0 à 10 ans.
[29] 11 à 20 ans.
[30] 21 à 40 ans.
[31] 41 à 60 ans.
[32] 61 ans et plus.

¶ For estimate by age and sex, see Part B beginning page 266.
[3] African population only.
[5] Reason for slight discrepancies between this and corresponding figure shown elsewhere not ascertained.
[39] 1-5 years.
[42] Excluding 209 persons in transit and 4 020 Polish refugees in camps.
[43] Including armed forces outside country and excluding enemy prisoners of war within country.
[44] Excluding Walvis Bay, an integral part of the Union, which is administered as if it were part of South West Africa.
[45] Excluding persons in transit and Polish refugees in camps.
[46] 6-15 years.
[47] 16-45 years.
[48] 46 years and over.
[49] *De jure* population, but including US armed forces stationed in the area.
[50] Reason for slight discrepancies between data shown below and corresponding data shown elsewhere is errors in data processing.
[51] Civilian population, excluding tourists.

¶ Pour une estimation de la population par âge et par sexe, voir la Partie B commençant à la page 266.

[3] Population africaine seulement.

[5] L'origine des légères disparités entre cette donnée et le chiffre correspondant publié ailleurs n'a pu être déterminée.

[39] 1 à 5 ans.

[42] Non compris 209 personnes de passage et 4 020 prisonniers polonais dans des camps.

[43] Y compris les forces armées hors du pays et non compris les prisonniers de guerre ennemis dans le pays.

[44] Non compris la région de Walvis Bay qui fait partie de l'Union, mais qui est administrée comme si elle faisait partie du Sud-Ouest Africain.

[45] Non compris les personnes de passage et les réfugiés polonais dans des camps.

[46] 6 à 15 ans.

[47] 16 à 45 ans.

[48] 46 ans et plus.

[49] Population de droit, mais y compris les forces armées américaines en garnison dans la région.

[50] L'origine des légères disparités entre les données figurant ci-dessous et les données correspondantes, publiées ailleurs provient d'erreurs dans l'exploitation des données.

[51] Population civile, à l'exclusion des touristes.

10. Population by 5-year age groups and sex (continued)

* Provisional.
[15] De jure population.
[38] 51 years and over.
[49] De jure population, but including US armed forces stationed in the area.
[50] Reason for slight discrepancies between data shown below and corresponding data shown elsewhere is errors in data processing.
[53] Population actually enumerated; total both sexes, including 10 per cent adjustment for underenumeration, is 1 505 465.
[54] Excluding Canal Zone and also tribal Indian (indigenous) population both shown separately.
[55] Tribal Indian population.
[56] St. Pierre only.
[57] 1-6 years.
[58] 7-15 years.
[59] 16-50 years.

10. Population par groupes d'âge quinquennaux et par sexe (suite)
Partie A — Population dénombrée (suite)

* Provisoire.

[15] Population de droit.

[38] 51 ans et plus.

[49] Population de droit, mais y compris les forces armées américaines en garnison dans la région.

[50] L'origine des légères disparités entre les données figurant ci-dessous et les données correspondantes publiées ailleurs provient d'erreurs dans l'exploitation des données.

[53] Population effectivement dénombrée; le chiffre total pour les deux sexes, y compris un ajustement de 10 pour cent pour compenser les lacunes du recensement, est de 1 505 465 habitants.

[54] Non compris la Zone du Canal et également les indiens groupés en tribus, qui figurent séparément dans le tableau.

[55] Indiens groupés en tribus.

[56] Saint-Pierre seulement.

[57] 1 à 6 ans.

[58] 7 à 15 ans.

[59] 16 à 50 ans.

¶ For estimate by age and sex, see Part B beginning page 266.

[15] De jure population.

[49] De jure population, but including US armed forces stationed in the area.

[60] De jure population, but excluding members of armed forces outside continental United States and civilian citizens absent from country for extended periods of time.

[61] Population actually enumerated; total both sexes, including 1 per cent adjustment for underenumeration, is 16 052 765.

[62] Population actually enumerated; total both sexes, including 8.4 per cent adjustment for underenumeration and estimated 87 000 tribal Indian population, is 3 019 031.

[63] Excluding Indian jungle population and 31 960 schedules not tabulated by age and sex.

[64] Excluding Amerindians of remote districts, numbering 6 023.

[65] Population actually enumerated; total, both sexes, including adjustment for underenumeration, is 6 206 544.

¶ Pour une estimation de la population par âge et par sexe, voir la Partie B commençant à la page 266.

[15] Population de droit.

[49] Population de droit, mais y compris les forces armées américaines en garnison dans la région.

[60] Population de droit, à l'exclusion des membres des forces armées hors des Etats Unis continentaux et des civils absents du pays pour de longues périodes.

[61] Population effectivement dénombrée; le chiffre total pour les deux sexes, y compris un ajustement de 1 pour cent pour compenser les lacunes du recensement, est de 16 052 765 habitants.

[62] Population effectivement dénombrée; le chiffre total pour les deux sexes, y compris un ajustement de 8,4 pour cent pour compenser les lacunes du recensement et une estimation de 87 000 unités pour les indiens groupés en tribus, est de 3 019 031 habitants.

[63] Non compris les indiens de la jungle et 31 960 questionnaires qui n'ont pas fait l'objet d'une exploitation par âge et par sexe.

[64] Non compris les Amérindiens des districts éloignés au nombre de 6 023.

[65] Population effectivement dénombrée; le chiffre total pour les deux sexes, y compris un ajustement pour compenser les lacunes du recensement, est de 6 206 544 habitants.

¶ For estimate by age and sex, see Part B beginning page 266.

[15] De *jure* population.

[66] Population actually enumerated, but excluding 12 881 schedules not tabulated by age and sex. Also excluding 17 000 for Indian jungle population and 50 067 adjustments for underenumeration.

[67] Excluding Indian jungle population, numbering 56 705.

[68] Colony only, but excluding Perim.

[69] Excluding non-resident military and shipping personnel, numbering 36 606 in 1946.

[70] Excluding persons in military and special internment camps, numbering 12 422 at time of census.

[71] 0-21 years.

[72] 21 years and over.

10. Population par groupes d'âge quinquennaux et par sexe (suite)

¶ Pour une estimation de la population par âge et par sexe, voir la Partie B commençant à la page 266.

[15] Population de droit.

[66] Population effectivement dénombrée, mais non compris 12 881 questionnaires qui n'ont pas fait l'objet d'une exploitation par âge et par sexe. Non compris également 17 000 indiens de la jungle et un ajustement de 50 067 unités pour compenser les lacunes du recensement.

[67] Non compris les indiens de la jungle au nombre de 56 705.

[68] Colonie seulement, mais à l'exclusion de Périm.

[69] Non compris les militaires et membres d'équipages de la marine marchande non résidents au nombre de 36 606 en 1946.

[70] Non compris les personnes dans des camps militaires et d'internement spéciaux au nombre de 12 422 au moment du recensement.

[71] 0 à 21 ans.

[72] 21 ans et plus.

10. Population by 5-year age groups and sex (continued)

Part A — Enumerated population (continued)

[See headnote on page 228.]

¶ For estimate by age and sex, see Part B beginning page 266.

[1] Age classification based on year of birth rather than on completed years of age.

[15] De *jure* population.

[73] Excluding Kashmir-Jammu and the tribal areas of Assam, where the census could not be taken, Andaman and Nicobar Islands, and settlements of Chandernagor, Karikal, Mahé, Pondichéry and Yanaon.

[74] Data are a smoothed age distribution, based on a 10 per cent sample.

[75] Excluding nomad population, estimated at 250 000.

[76] Excluding the Amami Islands, acquired from the Ryukyu Islands between 1951 and 1953.

[77] Excluding foreigners and military personnel.

[78] Excluding foreigners, and those Koreans, Formosans and Ryukyuans who stated that they wished to be repatriated.

[79] Data adjusted for underenumeration due to flood conditions at time of census. Population actually enumerated is 78 098 364.

[80] Excluding Allied military and civilian personnel and their dependents.

[81] Excluding civilian aliens within country numbering 21 885.

[82] Excluding transients afloat, non-resident military personnel and enemy prisoners of war, together numbering 14 735 and nomadic aborigines numbering 29 648.

10. Population par groupes d'âge quinquennaux et par sexe (suite)

¶ Pour une estimation de la population par âge et par sexe, voir la Partie B commençant à la page 266.

[1] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.

[15] Population de droit.

[73] Non compris le Cachemire-Jammu et la Zone de tribus d'Assam où il n'a pas été possible d'effectuer de recensement, les îles Andaman et Nicobar, et les comptoirs de Chandernagor, Karikal, Mahé, Pondichéry et Yanaon.

[74] Répartition par âge rectifiée, reposant sur un sondage à 10 pour cent.

[75] Non compris les nomades, estimés à 250 000.

[76] Non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953.

[77] Non compris les étrangers et les militaires.

[78] Non compris les étrangers et les Coréens, Formosans et ressortissants des Ryû-Kyû qui ont déclaré vouloir être rapatriés.

[79] Données ajustées pour compenser les lacunes du recensement attribuables aux inondations survenues au moment du dénombrement. La population effectivement dénombrée est de 78 098 364 habitants.

[80] Non compris les militaires et civils alliés ainsi que les membres de leur famille les accompagnant.

[81] Non compris les civils étrangers dans le pays au nombre de 21 885.

[82] Non compris les passagers à bord des navires, les militaires non résidents, et les prisonniers de guerre, s'élevant ensemble à 14 735 ainsi que les aborigènes nomades au nombre de 29 648.

¶ For estimate by age and sex, see Part B beginning page 266.
* Provisional.
[1] Age classification based on year of birth rather than on completed years of age.
[15] De *jure* population.
[87] Excluding Bratislava Bridgehead, ceded by Hungary in 1947, with a population numbering 3 379 in 1941.
[88] Excluding communes of Tende and Brigue, ceded by Italy in 1947, with a population numbering 2 848 at 1954 census; also excluding an estimated 663 000 enemy prisoners of war.
[89] Except for under-one-year group, age classification based on year of birth rather than on completed years of age.
[90] Data are a preliminary tabulation based on a 5 per cent sample of census returns.

10. Population par groupes d'âge quinquennaux et par sexe (suite)

¶ Pour une estimation de la population par âge et par sexe, voir la Partie B commençant à la page 266.

[1] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.

[15] Population de droit.

[87] Non compris la tête de pont de Bratislava, cédé par la Hongrie en 1947, avec 3 379 habitants en 1941.

[88] Non compris les communes de Tende et de Brigue cédées par l'Italie en 1947, avec 2 848 habitants au recensement de 1954; non compris également environ 663 000 prisonniers de guerre.

[89] Sauf pour le groupe des moins d'un an, la répartition par âge a été établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.

[90] Données fournies par une exploitation préliminaire fondée sur un sondage à 5 pour cent des réponses au questionnaire de recensement.

10. Population by 5-year age groups and sex (continued)
Part A — Enumerated population (continued)

* Provisional.

¶ For estimate by age and sex, see Part B beginning page 266.

[1] Age classification based on year of birth rather than on completed years of age.

[15] De *jure* population.

[91] Former British, French, US and USSR zones of occupation.

[92] Population is *de jure* in French and USSR zones of occupation, and in US zone except in Bremen.

[93] Including prisoners of war, civilian internees, and refugees in transit camps, together numbering 384 323 for Germany, 133 327 for Eastern Germany, and 247 240 for Western Germany.

[94] Population is *de jure* in French and US zones of occupation except in Bremen.

[95] Because of rounding, totals are not in all cases the sum of the parts.

[96] Civilian population, excluding dependents of armed forces stationed in the area and persons accommodated in harbour shipping, numbering 1 439 and 479 respectively.

[97] Including armed forces outside country, excluding alien armed forces within country.

10. Population par groupes d'âge quinquennaux et par sexe (suite)

* Provisoire.

¶ Pour une estimation de la population par âge et par sexe, voir la Partie B commençant à la page 266.

[1] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.

[15] Population de droit.

[91] Anciennes zones d'occupation britannique, française, américaine et russe.

[92] Population de droit dans les zones d'occupation française et russe, ainsi que dans la zone américaine, à l'exception de Brême.

[93] Y compris les prisonniers de guerre, les civils internés, et les réfugiés de passage dans les camps, s'élevant à 384 323 pour l'ensemble de l'Allemagne, c'est-à-dire, à 133 327 en Allemagne Orientale et à 247 240 en Allemagne Occidentale.

[94] Population de droit dans les zones d'occupation française et américaine, à l'exception de Brême.

[95] Comme les chiffres ont été arrondis les totaux ne correspondent pas toujours à la somme des éléments.

[96] Population civile, à l'exclusion des familles de militaires stationnés dans la région les accompagnant, et des personnes sur des navires dans le port, s'élevant respectivement à 1 439 et 479.

[97] Y compris les forces armées hors du pays; non compris les forces armées étrangères dans le pays.

10. Population by 5-year age groups and sex (continued)

Part A — Enumerated population (continued)

[See headnote on page 228.]

¶ For estimate by age and sex, see Part B beginning page 266.

[1] Age classification based on year of birth rather than on completed years of age.

[15] De jure population.

[98] Excluding non-Maltese members of armed forces stationed in the area and non-Maltese crews of merchant ships in harbour.

[99] Excluding villages of Elten and Tüddern, ceded by Germany in 1949, with a population estimated at 9 000 at time of transfer.

10. Population par groupes d'âge quinquennaux et par sexe (suite)

Partie A — Population dénombrée (suite)

* Provisional.

¶ For estimate by age and sex, see Part B beginning page 266.

[1] Age classification based on year of birth rather than on completed years of age.

[15] De *jure* population.

[49] De *jure* population, but including US armed forces stationed in the area.

[95] Because of rounding, totals are not in all cases the sum of the parts.

[104] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954, with a population estimated at 62 725 in 1953.

[105] Data are a preliminary tabulation based on a 2 per cent sample of census returns.

[106] Excluding full-blooded aborigines, estimated at 47 000 in 1944.

[107] 5-15 years.

[108] 16-20 years.

[109] 21-65 years.

[110] 66 years and over.

¶ Pour une estimation de la population par âge et par sexe, voir la Partie B commençant à la page 266.

[1] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.

[15] Population de droit.

[49] Population de droit, mais y compris les forces armées américaines en garnison dans la région.

[95] Comme les chiffres ont été arrondis les totaux ne correspondent pas toujours à la somme des éléments.

[104] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954; population estimée à 62 725 en 1953.

[105] Données fournies par une exploitation préliminaire reposant sur un sondage à 2 pour cent des réponses au questionnaire de recensement.

[106] Non compris les purs aborigènes, estimés à 47 000 en 1944.

[107] 5 à 15 ans.

[108] 16 à 20 ans.

[109] 21 à 65 ans.

[110] 66 ans et plus.

10. Population by 5-year age groups and sex (continued)

¶¶ Pour la population dénombrée par âge et par sexe, voir la Partie A commençant à la page 228.

[2] Non compris les militaires dans les casernes.

[3] Population africaine seulement.

[15] Population de droit.

[60] Population de droit, à l'exclusion des membres des forces armées hors des Etats Unis continentaux et des civils absents du pays pour de longues périodes.

[95] Comme les chiffres ont été arrondis les totaux ne correspondent pas toujours à la somme des éléments.

[107] 5 à 15 ans.

[114] Non compris le Yukon et les Territoires du Nord-Ouest.

[115] 5 à 17 ans.

[116] 18 ans et plus.

[117] Pour Aruba, Bonaire et Curaçao seulement.

[118] 16 à 17 ans.

[119] 18 à 22 ans.

[120] 23 à 45 ans.

[121] 46 à 54 ans.

¶¶ For enumerated population by age and sex, see Part A beginning page 228.

[5] Reason for slight discrepancies between this and corresponding figure shown elsewhere not ascertained.

[15] *De jure* population.

[70] Excluding persons in special military and internment camps, numbering 12 422 at time of census.

[80] Excluding Allied military and civilian personnel and their dependents.

[95] Because of rounding, totals are not in all cases the sum of the parts.

[122] Excluding Amerindians, estimated at 18 140 in 1953.

[123] Excluding foreigners.

[124] Present territory, i.e., excluding the Amami Islands transferred to Japan between 1951 and 1953.

10. Population par groupes d'âge quinquennaux et par sexe (suite)
Partie B — Population estimée (suite)

¶¶ Pour la population dénombrée par âge et par sexe, voir la Partie A commençant à la page 228.

[5] L'origine des légères disparités entre cette donnée et le chiffre correspondant publié ailleurs n'a pu être déterminée.

[15] Population de droit.

[70] Non compris les personnes dans des camps militaires et d'internement spéciaux, au nombre de 12 422 au moment du recensement.

[80] Non compris les militaires et civils alliés ainsi que les membres de leur famille les accompagnant.

[95] Comme les chiffres ont été arrondis les totaux ne correspondent pas toujours à la somme des éléments.

[122] Non compris les Amérindiens estimés à 18 140 en 1953.

[123] Non compris les étrangers.

[124] Territoire actuel, c'est-à-dire, non compris les îles Amami rendues au Japon entre 1951 et 1953.

10. Population by 5-year age groups and sex (continued)

Part B — Estimated population (continued)

¶¶ For enumerated population by age and sex, see Part A beginning page 228.

[15] *De jure* population.

[95] Because of rounding, totals are not in all cases the sum of the parts.

[110] 66 years and over.

[125] Excluding non-Maltese armed forces stationed in the area.

[126] 1-2 years.

[127] 3-7 years.

[128] 8-15 years.

[129] 16-60 years.

[130] 61-65 years.

[131] 0-15 years.

10. Population par groupes d'âge quinquennaux et par sexe (suite)

Partie B — Population estimée (suite)

¶¶ Pour la population dénombrée par âge et par sexe, voir la Partie A commençant à la page 228.
[15] Population de droit.
[95] Comme les chiffres ont été arrondis les totaux ne correspondent pas toujours à la somme des éléments.
[110] 66 ans et plus.
[125] Non compris les militaires non maltais en garnison dans la région.
[126] 1 à 2 ans.
[127] 3 à 7 ans.
[128] 8 à 15 ans.
[129] 16 à 60 ans.
[130] 61 à 65 ans.
[131] 0 à 15 ans.

10. Population by 5-year age groups and sex (continued)

Part B — Estimated population (continued)

¶¶ Pour la population dénombrée par âge et par sexe, voir la Partie A commençant à la page 228.

[15] Population de droit.

[104] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954; population estimée à 62 725 en 1953.

[132] Non compris une partie du district de Saipan avec une population de 733 personnes, dont 392 du sexe masculin et 341 du sexe féminin.

11. Population by single years of age and sex : each census, 1945 – 1954
Population par année d'âge et par sexe aux différents recensements effectués de 1945 à 1954

[For discussion, see page 21.—Voir explications à la page 69.]

[1] Age classification based on year of birth rather than on completed years of age.
[2] Excluding military personnel in barracks.

[1] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.
[2] Non compris les militaires dans les casernes.

11. Population by single years of age and sex (continued) — Population par année d'âge et par sexe (suite)

[1] Age classification based on year of birth rather than on completed years of age.
[2] Excluding military personnel in barracks.

[1] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.
[2] Non compris les militaires dans les casernes.

[3] Excluding nomad population numbering 55 073, enemy prisoners of war and alien armed forces within country.

[4] Summation of populations at individual ages gives total of 18 966 769 for both sexes and 9 391 730 for males.

[3] Non compris 55 073 nomades, les prisonniers de guerre ennemis et les forces armées étrangères dans le pays.

[4] En additionnant les chiffres par année d'âge on arrive à un total de 18 966 769 habitants des deux sexes et à celui de 9 391 730 pour le sexe masculin.

[12] *De jure* population, but including US armed forces stationed in the area.

[13] Small discrepancies between totals derived from single-year populations shown below and corresponding age-group totals shown elsewhere result of errors in data processing.

[12] Population de droit, y compris les forces armées américaines en garnison dans la région.

[13] Les légères disparités entre les totaux obtenus à partir des chiffres de population par année d'âge indiqués ci-dessous et les totaux partiels par groupes d'âge publiés dans d'autres tableaux proviennent d'erreurs dans l'exploitation des données.

11. Population by single years of age and sex (continued) — Population par année d'âge et par sexe (suite)

[For discussion, see page 21. — Voir explications à la page 69.]

[12] *De jure* population, but including US armed forces stationed in the area.

[13] Small discrepancies between totals derived from single-year populations shown below and corresponding age-group totals shown elsewhere result of errors in data processing.

[12] Population de droit, y compris les forces armées américaines en garnison dans la région.

[13] Les légères disparités entre les totaux obtenus à partir des chiffres de population par année d'âge indiqués ci-dessous et les totaux partiels par groupes d'âge publiés dans d'autres tableaux proviennent d'erreurs dans l'exploitation des données.

11. Population by single years of age and sex (continued) — Population par année d'âge et par sexe (suite)

[18] Final tabulation, based on 20 per cent sample of census returns. Discrepancies between US and age-group totals derived from single-year populations shown below and corresponding figures shown elsewhere are result of sampling and data processing errors.

[18] Exploitation définitive des données reposant sur un sondage à 20 pour cent des questionnaires de recensement. Les disparités qui existent entre le total officiel du recensement des Etats-Unis, les totaux partiels par groupe d'âge obtenus à partir des chiffres de répartition de la population par année d'âge indiqués ci-dessous et les chiffres correspondants publiés dans d'autres tableaux proviennent du sondage et d'erreurs dans l'exploitation des données.

11. Population by single years of age and sex (continued) — Population par année d'âge et par sexe (suite)

[15] *De jure* population.

[27] Excluding Kashmir-Jammu and the tribal areas of Assam, where the census was not able to be taken, Andaman and Nicobar Islands, Chandernagor, Karikal, Mahé, Pondichéry and Yanaon.

[28] Data are a smoothed age distribution based on a 10 per cent sample.

[15] Population de droit.

[27] Non compris le Cachemire-Jammu et la zone de tribus d'Assam où il fut impossible d'effectuer un recensement, ainsi que les îles Andaman et Nicobar, Chandernagor, Karikal, Mahé, Pondichéry et Yanaon.

[28] Les données se rapportent à une répartition par âge rectifiée et ont été obtenues par sondage à 10 pour cent.

[29] Excluding the Amami Islands acquired from the Ryukyu Islands between 1951 and 1953.

[31] Data adjusted for underenumeration due to flood conditions at time of census. Population actually enumerated: 78 098 364.

[32] Excluding allied military and civilian personnel and their dependents.

[29] Non compris les îles Amami, détachées des îles Ryû-Kyû entre 1951 et 1953.

[31] Données ajustées pour compenser les lacunes du recensement dues aux inondations qui se produisirent au moment du dénombrement. Population effectivement dénombrée 78 098 364 habitants.

[32] Non compris les militaires et civils alliés ainsi que les membres de leur famille les accompagnant.

11. Population by single years of age and sex (continued) — Population par année d'âge et par sexe (suite)

[For discussion, see page 21. — Voir explications à la page 69.]

[36] Excluding communes of Tende and Brigue, ceded by Italy in 1947, with a population numbering 2 848 at 1954 census.

[37] Excluding an estimated 663 000 enemy prisoners of war.

[38] Except for under-one-year group, age classification based on year of birth rather than on completed years of age.

[36] Non compris les communes de Tende et de Brigue cédées par l'Italie en 1947 avec une population de 2 848 habitants au recensement de 1954.

[37] Non compris une estimation de 663 000 personnes représentant les prisonniers de guerre ennemis dans le pays.

[38] A l'exception du groupe d'âge au-dessous d'un an la répartition par âge a été établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.

11. Population by single years of age and sex (continued) — Population par année d'âge et par sexe (suite)

[For discussion, see page 21. — Voir explications à la page 69.]

[1] Age classification based on year of birth rather than on completed years of age.
[15] *De jure* population.
[50] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954.

[1] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.
[15] Population de droit.
[50] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954.

11. Population by single years of age and sex (continued) — Population par année d'âge et par sexe (suite)

* Provisional.

[15] De *jure* population.

[50] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954.

[51] Data are a preliminary tabulation based on a 2 per cent sample of census returns. Because of rounding, totals are not in all cases the sum of the parts.

* Provisoire.

[15] Population de droit.

[50] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954.

[51] Données fournies par une exploitation préliminaire reposant sur un sondage à 2 pour cent des réponses au questionnaire de recensement. Comme les chiffres ont été arrondis, les totaux ne correspondent pas toujours à la somme des éléments.

11. Population by single years of age and sex (continued) — Population par année d'âge et par sexe (suite)

[1] Age classification based on year of birth rather than on completed years of age.
[53] Including 1 209 persons of unknown sex.
[54] Summation of populations at individual ages gives total of 32 083.

[1] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.
[53] Y compris 1 209 personnes de sexe inconnu.
[54] En additionnant les chiffres par année d'âge on arrive à un total de 32 083 personnes.

[1] Excluding unknown age, shown separately.

[15] Including armed forces outside country and excluding enemy prisoners of war within country.

[16] *De jure* population, but including US armed forces stationed in the area.

[17] Reason for slight discrepancies between totals by age and sex shown here and corresponding figures shown elsewhere is errors in data processing.

[18] Excluding Separated, shown separately below.

[1] Excluding unknown age, shown separately.
[2] Age classification based on year of birth rather than on completed years of age.
[8] *De jure* population.
[18] Excluding Separated, shown separately below.
[43] Excluding communes of Tende and Brigue, ceded by Italy in 1947, with a population numbering 2 848 at 1954 census; also excluding an estimated 663 000 enemy prisoners of war.
[44] Data are a preliminary tabulation based on a 5 per cent sample of census returns.
[45] Including prisoners of war, civilian internees, and refugees in transit camps, together numbering 133 327 for Eastern Germany, and 247 240 for Western Germany.
[46] Population is *de jure* in French and US zones of occupation except in Bremen.
[47] Excluding Separated in American and French zones, where they are included with Divorced.
[48] For American and French zones only; for British zone, included with Married.

12. Population selon l'état matrimonial, l'âge et le sexe (suite)

[1] Non compris la population d'âge inconnu qui figure séparément dans le tableau.

[2] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.

[8] Population de droit.

[18] Non compris les personnes séparées qui figurent séparément ci-dessous.

[43] Non compris les communes de Tende et de Brigue cédées par l'Italie en 1947, avec une population de 2 848 au recensement de 1944; non compris également une estimation de 663 000 unités pour les prisonniers de guerre ennemis.

[44] Données fournies par une exploitation préliminaire reposant sur un sondage à 5 pour cent des réponses au questionnaire de recensement.

[45] Y compris les prisonniers de guerre, les civils internés et les réfugiés dans des camps de passage s'élevant ensemble à 133 327 en Allemagne Orientale, et à 247 240 en Allemagne Occidentale.

[46] Population de droit dans les zones d'occupation française et américaine, à l'exception de Brême.

[47] Non compris les personnes séparées dans les zones d'occupation américaine et française où elles figurent avec les divorcées.

[48] Pour les zones d'occupation française et américaine seulement; dans la zone britannique cette catégorie est comprise avec les personnes mariées.

12. Population by marital status, age and sex (continued)

[1] Excluding unknown age, shown separately.
[8] De jure population.
[18] Excluding Separated, shown separately below.
[19] Reason for slight discrepancy between this and corresponding figure shown elsewhere not ascertained.
[57] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in 1954, with a population estimated at 62 725 in 1953.
[58] Data are a preliminary tabulation based on a 2 per cent sample of census returns.
[59] Because of rounding, totals are not in all cases the sum of the parts.
[60] Not available separately; included only in male and female totals.
[61] Excluding full-blooded aborigines, estimated at 47 000 in 1944.

12. Population selon l'état matrimonial, l'âge et le sexe (suite)

[1] Non compris la population d'âge inconnu qui figure séparément dans le tableau.
[8] Population de droit.
[18] Non compris les personnes séparées qui figurent séparément ci-dessous.
[19] L'origine de la légère disparité entre cette donnée et le chiffre correspondant publié ailleurs n'a pu être déterminée.
[57] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en 1954, avec une population estimée à 62 725 habitants en 1953.
[58] Données fournies par une exploitation préliminaire reposant sur un sondage à 2 pour cent des réponses aux questionnaires du recensement.
[59] Comme les chiffres ont été arrondis, les totaux ne correspondent pas toujours à la somme des éléments.
[60] On ne connaît pas les chiffres relatifs à cette catégorie; ils sont compris dans les totaux par sexe.
[61] Non compris les purs aborigènes estimés à 47 000 en 1944.

12. Population by marital status, age and sex (continued)

[1] Excludes unknown age shown separately.
[2] Age classification based on year of birth rather than on completed years of age.
[3] Excluding military personnel in barracks.
[4] Reason for slight discrepancies between these and corresponding figures shown elsewhere not ascertained.
[5] Excluding nomad population numbering 55 073, enemy prisoners of war, and alien armed forces within country.

13. Population selon l'analphabétisme, l'âge et le sexe aux différents recensements effectués de 1945 à 1954

[On entend par analphabétisme l'inaptitude à lire et à écrire; par suite, et à moins d'indication contraire, les semi-illettrés sont compris avec les analphabètes. Voir explications à la page 71.]

[1] Excludes unknown age shown separately.

[13] Excluding Canal Zone, and also tribal Indian population numbering 48 654.

[14] *De jure* population, but including US armed forces stationed in the area.

[15] Reason for slight discrepancies between totals by age and sex shown here and corresponding figures shown elsewhere is errors in data processing.

13. Population selon l'analphabétisme, l'âge et le sexe (suite)

[1] Excludes unknown age shown separately.
[2] Age classification based on year of birth rather than on completed years of age.
[11] De *jure* population.
[32] Excluding communes of Tende and Brigue, ceded by Italy in 1947; also excluding an estimated 663 000 enemy prisoners of war.
[33] Reason for discrepancies between totals by age and sex shown here and corresponding figures shown elsewhere is allocation in this table of some unknowns to broad age groups.
[34] Including armed forces outside country and excluding alien armed forces within country.

13. Population selon l'analphabétisme, l'âge et le sexe (suite)

[1] Non compris les personnes d'âge inconnu qui figurent séparément dans le tableau.

[2] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.

[11] Population de droit.

[32] Non compris les communes de Tende et de Brigue cédées par l'Italie en 1947; non compris également environ 663 000 prisonniers de guerre ennemis.

[33] Les disparités qui existent entre les totaux par âge et par sexe reproduits ici et les chiffres correspondants publiés ailleurs proviennent de la répartition dans ce tableau des personnes d'âge inconnu entre les grands groupes d'âge.

[34] Y compris les forces armées hors du pays et non compris les forces armées étrangères dans le pays.

[1] Excludes unknown age shown separately.
[10] Reason for slight discrepancies between totals by age and sex shown here and corresponding figures shown elsewhere not ascertained.
[11] De *jure* population.
[36] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954.
[37] Data are a preliminary tabulation based on a 2 per cent sample of census returns. Because of rounding, totals are not in all cases the sum of the parts.
[38] Literacy defined as ability to read and write the native language only.

[1] Non compris les personnes d'âge inconnu qui figurent séparément dans le tableau.

[10] L'origine des légères disparités entre les totaux par âge et sexe reproduits ici et les chiffres correspondants publiés ailleurs n'a pu être déterminée.

[11] Population de droit.

[36] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954.

[37] Données provenant d'une exploitation préliminaire reposant sur un sondage à 2 pour cent des réponses au questionnaire de recensement. Comme les chiffres ont été arrondis, les totaux ne correspondent pas toujours à la somme des éléments.

[38] Sont considérées comme sachant lire et écrire les personnes qui peuvent le faire dans la langue indigène seulement.

[1] Non compris les personnes d'âge inconnu qui figurent séparément dans le tableau.

[38] Sont considérées comme sachant lire et écrire les personnes qui peuvent le faire dans la langue indigène seulement.

14. Population, total and economically active, by sex : each census, 1945 – 1954
Population totale et population active selon le sexe aux différents recensements effectués de 1945 à 1954

[Economically active is defined in terms of minimum age; for ages included, see list at end of table. Percentages are the populations defined as economically active per 100 total population of all ages. For definitions and discussion, see page 25.

La population active est définie en fonction d'un âge minimum. Voir la liste des âges pris en considération à la fin du tableau. Les pourcentages expriment le nombre de personnes actives pour 100 personnes de tous âges dans la population totale. Voir définitions et explications à la page 73.]

* Provisional.

[4] *De jure* population.

[27] Excluding non-resident military and shipping personnel, numbering 36 606.

[28] Excludes part-time employees, unpaid family workers and persons seeking work for first time. Includes 284 retired persons and 1 362 persons deriving their income from rents, etc.

[29] Including armed forces, but excluding 7 482 prisoners of war and illegal immigrants in special internment camps.

[30] Excluding Kashmir-Jammu and the tribal areas of Assam, where census could not be taken, and settlements of Mahé, Pondichéry, Karikal and Yanaon which became part of India 1 November 1954. Also excluding 251 082 census schedules destroyed by fire.

[31] Data based on a 10 per cent sample of census returns.

[32] Excluding the Amami Islands, acquired from the Ryukyu Islands between 1951 and 1953.

[33] Excluding Allied military and civilian personnel and their dependents.

[34] Excludes unemployed.

[35] Excluding civilian aliens within country, numbering 21 885 at 1949 census.

[36] Excluding transients afloat, non-resident military personnel and enemy prisoners of war, together numbering 14 735 at 1947 census.

[37] Excluding 1 442 transients and 66 members of the British armed forces.

[38] Excluding Kashmir-Jammu, Gilgit, Baltistan, Junagadh and Manavadar; also excluding 1 759 932 persons in Northwest Frontier Provinces and 206 669 foreigners.

[39] Present territory, i.e., excluding Amami Islands, which reverted to Japan between 1951 and 1953.

[40] Excluding transients afloat, non-resident military personnel and enemy prisoners of war, together numbering 36 015.

* Provisoire.

[4] Population de droit.

[27] Non compris les militaires et membres d'équipages de la marine marchande, non résidents, s'élevant à 36 606.

[28] Non compris les employés à mi-temps, les travailleurs familiaux non rémunérés et les personnes cherchant un emploi pour la première fois. Y compris 284 personnes ne travaillant plus et 1 362 rentiers.

[29] Y compris les forces armées, mais non compris 7 482 prisonniers de guerre et immigrants illégaux dans des camps d'internement spéciaux.

[30] Non compris le Cachemire-Jammu et la Zone de tribus d'Assam où il fut impossible d'effectuer un recensement, ainsi que les comptoirs de Pondichéry, Karikal, Mahé et Yanaon qui font partie de l'Inde depuis le 1er novembre 1954. Non compris également 251 082 questionnaires détruits par un incendie.

[31] Données reposant sur un sondage à 10 pour cent des réponses au questionnaire de recensement.

[32] Non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953.

[33] Non compris les militaires et civils alliés ainsi que les membres de leur famille les accompagnant.

[34] Non compris les chômeurs.

[35] Non compris les civils étrangers dans le pays, s'élevant à 21 885 au recensement de 1949.

[36] Non compris les personnes à bord de navires, les militaires non résidents et les prisonniers de guerre ennemis, s'élevant ensemble à 14 735 au recensement de 1947.

[37] Non compris 1 442 personnes de passage et 66 militaires britanniques.

[38] Non compris le Cachemire-Jammu, le Gilgit, le Baltistan, le Junagadh et le Manavadar ainsi que 1 759 932 personnes dans les provinces frontalières du Nord-Ouest et 206 669 étrangers.

[39] Territoire actuel, c'est-à-dire, non compris les îles Amami, rendues au Japon entre 1951 et 1953.

[40] Non compris les personnes à bord de navires, les militaires non résidents et les prisonniers de guerre ennemis, s'élevant ensemble à 36 015.

* Provisional.
[4] *De jure* population.
[41] Excluding Bratislava Bridgehead, ceded by Hungary in 1947.
[42] Excluding communes of Tende and Brigue, ceded by Italy in 1947, with a population numbering 2 848 at 1954 census; also excluding an estimated 663 000 enemy prisoners of war.
[43] Population is *de jure* in French and USSR zones and in US zone except in Bremen.
[44] Excluding prisoners of war, civilian internees, and refugees in transit camps.
[45] Population is *de jure* in French and US zones of occupation except in Bremen.
[46] Excluding non-Maltese members of armed forces stationed in the area and non-Maltese crews of merchant ships in harbour.
[47] Excluding villages of Elten and Tüddern, ceded by Germany in 1949, with a population estimated at 9 000 at time of transfer.
[48] Population present in area, excluding those temporarily present.
[49] Excluding commune of Kirrberg, ceded by Germany in 1947, with a population numbering 1 756.

* Provisoire.
[4] Population de droit.
[41] Non compris la tête de pont de Bratislava cédée par la Hongrie en 1947.
[42] Non compris les communes de Tende et de Brigue cédées par l'Italie en 1947, avec une population de 2 848 personnes au recensement de 1954; non compris également environ 663 000 prisonniers de guerre ennemis.
[43] Population de droit dans les zones française et soviétique ainsi que dans la zone américaine, à l'exception de Brême.
[44] Non compris les prisonniers de guerre, les civils internés et les réfugiés dans des camps de passage.
[45] Population de droit dans les zones française et américaine, à l'exception de Brême.
[46] Non compris les militaires non maltais en garnison dans la région et les membres d'équipages non maltais des navires marchands dans le port.
[47] Non compris les villages d'Elten et de Tüddern cédés par l'Allemagne en 1949, avec une population estimée à 9 000 habitants au moment du transfert.
[48] Population présente sur le territoire actuel, à l'exception des personnes temporairement présentes.
[49] Non compris la commune de Kirrberg, cédée par l'Allemagne en 1947 avec 1 756 habitants.

[4] *De jure* population.
[12] *De jure* population, but including US armed forces stationed in the area.

[50] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954, with a population estimated at 62 725 in 1953.
[51] Data are a preliminary tabulation based on a 2 per cent sample of census returns. Because of rounding, totals are not in all cases the sum of the parts.

[52] Excluding full-blooded aborigines and armed forces outside the country.
[53] Including 1 209 schedules not tabulated by sex.

[54] Excluding armed forces outside the country, numbering 44 081 in 1945 (of which 43 415 males and 666 females) and 1 830 in 1951.

[4] Population de droit.
[12] Population de droit, mais y compris les forces armées américaines en garnison dans la région.
[50] Non compris Koper et Buje qui constituent la partie de l'ancien Territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954, avec une population estimée à 62 725 habitants en 1953.
[51] Données fournies par une exploitation préliminaire ayant porté sur un échantillon seulement (2 pour cent) des réponses au questionnaire de recensement. Comme les chiffres ont été arrondis, les totaux ne correspondent pas toujours à la somme des éléments.
[52] Non compris les purs aborigènes et les forces armées hors du pays.
[53] Non compris 1 209 questionnaires qui n'ont pas fait l'objet d'une exploitation par sexe.
[54] Non compris les militaires hors du pays, s'élevant à 44 081 en 1945 (dont 43 415 hommes et 666 femmes) et à 1 830 en 1951.

14. Population, total and economically active, by sex (continued) — Population totale et population active selon le sexe (suite)

[See headnote on page 472. — Voir note explicative à la page 472.]

Note:

Economically active population is limited to persons over a stated minimum age in some countries. The known minimum ages are given below; for countries not shown in list, it may be assumed that a minimum has not been established.

15. Population, total and economically active, by age and sex : each census, 1945 – 1954

Population totale et population active selon l'âge et le sexe aux différents recensements effectués de 1945 à 1954

[Data relate to population above a stated minimum age, including persons of unknown age believed to be above that minimum. Percentages are the number of economically active population in each age-sex group per 100 total population in the same age-sex group. For definitions and discussion, see page 25.
Les données se rapportent à la partie de la population ayant dépassé un certain âge, y compris les personnes d'âge inconnu que l'on croit être également au-dessus de cet âge. Les pourcentages expriment le nombre de personnes actives de chaque sexe et dans chaque groupe d'âge pour 100 personnes du même âge et sexe dans la population totale. Voir définitions et explications à la page 74.]

[2] Age classification based on year of birth rather than on completed years of age.

[6] Excluding nomad population numbering 55 073, enemy prisoners of war and alien armed forces within country.

[7] Economically active population includes 5 772 906 wives and relatives doing domestic duties and 1 218 298 students, pensioners and retired persons.

[2] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.

[6] Non compris les nomades au nombre de 55 073, les prisonniers de guerre ennemis et les forces armées étrangères dans le pays.

[7] La population active comprend 5 772 906 épouses et parents engagés dans des besognes domestiques ainsi que 1 218 298 étudiants, retraités et personnes ne travaillant plus.

Unknown — Inconnu	–	–	–	–	–	–	–	–	–

[16] Former mandated territory (Union of South Africa).
[20] De *jure* population, but including US armed forces stationed in the area.
[21] Reason for slight discrepancies between totals by age and sex shown here and corresponding figures shown elsewhere is errors in data processing.

[16] Territoire auparavant sous mandat (Union Sud-Africaine).
[20] Population de droit, mais y compris les forces armées américaines en garnison dans la région.
[21] Les légères disparités entre les totaux par âge et par sexe indiqués ici et les chiffres correspondants publiés ailleurs proviennent d'erreurs dans l'exploitation des données.

15. Population, total and economically active, by age and sex (continued)— Population totale et population active selon l'âge et le sexe (suite)

[See headnote on page 479. — Voir note explicative à la page 479.]

[10] *De jure* population.

[25] Economically active population excludes 73 147 persons (62 722 males and 10 425 females) unemployed for 13 weeks or more, for whom age classification is not available.

[10] Population de droit.

[25] La population active ne comprend pas 73 147 personnes (dont 62 722 du sexe masculin et 10 425 du sexe féminin) sans travail depuis 13 semaines ou plus et pour lesquelles on ne connaît pas la répartition par âge.

15. Population, total and economically active, by age and sex (continued)— Population totale et population active selon l'âge et le sexe (suite)

[20] *De jure* population, but including US armed forces stationed in the area.
[21] Reason for slight discrepancies between totals by age and sex shown here and corresponding figures shown elsewhere is errors in data processing.
[26] Excluding Canal Zone and also tribal Indian population numbering 48 654.

[20] Population de droit, mais y compris les forces armées américaines en garnison dans la région.
[21] Les légères disparités entre les totaux par âge et par sexe indiqués ici et les chiffres correspondants publiés ailleurs proviennent d'erreurs dans l'exploitation des données.
[26] Non compris la Zone du Canal ainsi que les indiens groupés en tribus estimés à 48 654.

[27] De *jure* population, but excluding armed forces outside continental United States and civilian citizens absent from the country for extended periods of time.

[28] Final tabulation of economically active population based on a 20 per cent sample of census returns. Slight discrepancies between totals by age and sex shown here and corresponding figures shown elsewhere are result of sampling and data processing errors.

[27] Population de droit, mais non compris les membres des forces armées hors des Etats-Unis continentaux et les civils absents du pays pour de longues périodes.

[28] L'exploitation définitive des données sur la population active repose sur un sondage à 20 pour cent des réponses au questionnaire de recensement. Les légères disparités entre les totaux par âge et par sexe indiqués ici et les chiffres correspondants publiés ailleurs proviennent d'erreurs dans l'exploitation des données.

15. Population, total and economically active, by age and sex (continued)— Population totale et population active selon l'âge et le sexe (suite)

[10] *De jure* population.
[29] Population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.
[30] 14-17 years.
[31] Population actually enumerated, i.e., excluding tribal Indian population estimated at 87 000 and an 8.4 per cent adjustment for underenumeration.
[32] Excluding Indian jungle population and 31 960 schedules not tabulated by age, sex and economic characteristics.

[10] Population de droit.
[29] Population effectivement dénombrée, c'est-à-dire, non compris un ajustement de 1 pour cent pour compenser les lacunes du recensement.
[30] Personnes de 14 à 17 ans.
[31] Population effectivement dénombrée, c'est-à-dire, non compris les indiens groupés en tribus estimés à 87 000 et un ajustement de 8,4 pour cent pour compenser les lacunes du recensement.
[32] Non compris les indiens de la jungle et 31 960 questionnaires qui n'ont fait l'objet d'une exploitation selon l'âge, le sexe et les caractéristiques économiques.

[10] *De jure* population.

[36] Population actually enumerated, but excluding 12 881 schedules not tabulated by age, sex and economic characteristics. Also excluding 17 000 for Indian jungle population and 50 067 adjustment for under-enumeration.

[37] Excluding Indian jungle population, numbering 56 705.

[10] Population de droit.

[36] Population effectivement dénombrée, mais non compris 12 881 questionnaires qui n'ont pas fait l'objet d'une exploitation selon l'âge, le sexe et les caractéristiques économiques. Non compris également 17 000 indiens de la jungle ainsi qu'un ajustement de 50 067 unités pour compenser les lacunes du recensement.

[37] Non compris les indiens de la jungle au nombre de 56 705.

15. Population, total and economically active, by age and sex (continued)— Population totale et population active selon l'âge et le sexe (suite)

[10] *De jure* population.
[41] For 14-19 years.
[42] Distribution of economically active population based on a 10 per cent sample of census returns. Because of rounding, totals are not in all cases the sum of their parts.
[43] Excluding the Amami Islands, acquired from the Ryukyu Islands between 1951 and 1953.
[44] Excluding Allied military and civilian personnel and their dependents.
[45] Ryukyuan nationals only in present territory, i.e., excluding Amami Islands.

[10] Population de droit.
[41] Personnes de 14 à 19 ans.
[42] La répartition de la population active repose sur un sondage à 10 pour cent des réponses au questionnaire de recensement. Comme les chiffres ont été arrondis, les totaux ne correspondent pas toujours à la somme des éléments.
[43] Non compris les îles Amami, détachées des îles Ryû-Kyû entre 1951 et 1953.
[44] Non compris les militaires et civils alliés ainsi que les membres de leur famille les accompagnant.
[45] Ressortissants des îles Ryû-Kyû présents sur le territoire actuel, c'est-à-dire, non compris les îles Amami.

15. Population, total and economically active, by age and sex (continued)— Population totale et population active selon l'âge et le sexe (suite)

[2] Age classification based on year of birth rather than on completed years of age.
[10] De jure population.
[30] 14-17 years.
[47] Excluding communes of Tende and Brigue, ceded by Italy in 1947, with a population numbering 2 848 at 1954 census; also excluding an estimated 663 000 enemy prisoners of war.
[48] Total population includes prisoners of war, civilian internees, and refugees in transit camps, together numbering 133 327 for Eastern Germany and 247 240 for Western Germany.

[2] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.
[10] Population de droit.
[30] Personnes de 14 à 17 ans.
[47] Non compris les communes de Tende et de Brigue cédées par l'Italie en 1947, avec une population de 2 848 personnes du recensement de 1954; non compris également environ 663 000 prisonniers de guerre ennemis.
[48] Le chiffre total de la population comprend les prisonniers de guerre, les civils internés et les réfugiés dans des camps de passage s'élevant ensemble à 133 327 en Allemagne orientale et à 247 240 en Allemagne occidentale.

[10] *De jure* population.

[48] Total population includes prisoners of war, civilian internees, and refugees in transit camps, together numbering 133 327 for Eastern Germany and 247 240 for Western Germany.

[49] Population is *de jure* in French and US zones of occupation except in Bremen.

[50] Reason for discrepancies between 5-year age-group totals shown here and corresponding figures shown elsewhere not ascertained.

[51] Economically active population excludes 220 000 female unpaid family workers for whom age classification is not available.

[52] For 16-19 years only.

[10] Population de droit.

[48] Le chiffre total de la population comprend les prisonniers de guerre, les civils internés et les réfugiés dans des camps de passage s'élevant ensemble à 133 327 en Allemagne orientale et à 247 240 en Allemagne occidentale.

[49] Population de droit dans les zones française et américaine, à l'exception de Brême.

[50] L'origine des disparités entre les totaux par groupes d'âges quinquennaux publiés ici et les chiffres correspondants figurant ailleurs, n'a pu être déterminée.

[51] La population active ne comprend pas 220 000 travailleurs familiaux non rémunérés du sexe féminin dont la répartition par âge n'est pas connue.

[52] Personnes de 16 à 19 ans seulement.

15. Population, total and economically active, by age and sex (continued)— Population totale et population active selon l'âge et le sexe (suite)

[2] Age classification based on year of birth rather than on completed years of age.
[10] *De jure* population.
[56] Economically active population excludes 14 895 female part-time workers for whom age classification is not available.
[57] Economically active population excludes 2 802 441 persons (277 425 males and 2 525 016 females), classified as economically active but who receive no remuneration or whose social status provides a means of subsistence.

[2] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.
[10] Population de droit.
[56] La population active ne comprend pas 14 895 femmes travaillant à mi-temps dont la répartition par âge n'est pas connue.
[57] La population active ne comprend pas 2 802 441 personnes, dont 277 425 du sexe masculin et 2 525 016 du sexe féminin considérées comme faisant partie de la population active mais qui ne reçoivent aucune rémunération ou qui tirent leurs moyens d'existence de leur situation sociale.

15. Population, total and economically active, by age and sex (continued)— Population totale et population active selon l'âge et le sexe (suite)

[10] *De jure* population.

[62] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954, with a population estimated at 62 725 in 1953.

[63] Data are a preliminary tabulation based on a 2 per cent sample of census returns. Because of rounding, totals are not in all cases the sum of the parts.

[64] Excluding full-blooded aborigines and armed forces outside the country.

[10] Population de droit.

[62] Non compris Koper et Buje qui constituent la partie de l'ancien Territoire libre de Trieste attribuées à la Yougoslavie en octobre 1954, avec une population estimée à 62 725 habitants en 1953.

[63] Données fournies par une exploitation préliminaire ayant porté sur un échantillon seulement (2 pour cent) des réponses au questionnaire de recensement. Comme les chiffres ont été arrondis, les totaux ne correspondent pas toujours à la somme des éléments.

[64] Non compris les purs aborigènes et les forces armées hors du pays.

15. Population, total and economically active, by age and sex (continued)— Population totale et population active selon l'âge et le sexe (suite)

[See headnote on page 479. — Voir note explicative à la page 479.]

[20] Limited to population 10 years of age and over.

[41] Population actually enumerated, i.e., excluding 314 866 for tribal Indian population and adjustment for underenumeration.

[42] Excluding 163 406 *Colonos* (142 535 males and 20 871 females), persons working in agriculture and livestock who, for remuneration, are allowed to cultivate a piece of the employer's land; also excluding 139 096 *Comunarios* (116 856 males and 22 240 females), persons, usually native Indians, who work individually or collectively on land given by the Government.

[43] Excluding Indian jungle population and 31 960 schedules not tabulated by economic characteristics.

[44] Excluding Amerindians of remote districts, numbering 6 023.

[45] Includes 1 317 persons seeking work for first time, of which 933 males and 384 females.

[3] Personnes de 14 ans et plus seulement.
[48] Non compris les chômeurs.
[56] Non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953.
[57] Données n'ayant fait l'objet d'aucun ajustement pour compenser les lacunes du recensement attribuables aux inondations.
[58] L'impression est classée avec le Commerce (Branche 6) et non avec les Industries manufacturières (Branches 2-3).
[59] Les services sanitaires sont classés avec les Services (Branche 8) et non avec l'Electricité, le gaz, l'eau et les services sanitaires (Branche 5).
[60] Les services radiophoniques sont classés avec les Transports, entrepôts et communications (Branche 7) et non avec les Services (Branche 8).
[61] Y compris les personnes travaillant avec les forces d'occupation.
[62] Données reposant sur un sondage à 10 pour cent des réponses au questionnaire de recensement. Comme les chiffres ont été arrondis les totaux ne correspondent pas toujours à la somme des éléments.
[63] Classés avec les Transports, entrepôts et communications (Branche 7).
[64] Les restaurants, cafés et autres établissements du même ordre sont classés dans le Commerce (Branche 6) et non dans les Services (Branche 8).
[65] Comprennent l'Electricité, le gaz, l'eau, les services sanitaires (Branche) 5) et les services radiophoniques.
[66] Ne comprennent pas les services radiophoniques; comprennent les ateliers de réparations mécaniques.

[17] Persons seeking work for first time.
[26] Limited to population 12 years of age and over.
[67] Excluding Kashmir-Jammu, Gilgit, Baltistan, Junagadh, Manavadar; also excluding 2 647 158 persons in Northwest Frontier Provinces, of which 1 395 696 males and 1 251 462 females.
[68] Pakistan nationals only, excluding unemployed persons and armed forces.
[69] Agricultural Labour Force was classed according to the land tenure status, viz:
i) Cultivators: Owning all land tilled
ii) Cultivators: Owning part and renting part of the land tilled
iii) Cultivators: Renting all land tilled
iv) Cultivators: Renting and also working for hire
v) Landless Agricultural Labourers.
"In the table, the first four categories have been classed as 'workers on own account' and the last one as 'employees'. Employers against Agriculture, Forestry, Hunting and Fishing are all in respect of 'Forestry and Fishery' that were classed in four categories adopted for the Non Agricultural Labour Force. Herdsmen, Dairymen, Poultry keepers and Nurserymen, etc., who form part of the Agricultural Labour Force are not classed by status and are shown under 'not classified elsewhere by status.' "

[17] Personnes cherchant un emploi pour la première fois.

[26] Personnes de 12 ans et plus seulement.

[67] Non compris le Cachemire-Jammu, le Gilgit, le Baltistan, le Junagadh et le Manavadar ainsi que 2 647 158 personnes (1 395 696 du sexe masculin et 1 251 462 du sexe féminin) dans la province frontalière du nord-ouest.

[68] Ressortissants pakistanais seulement, non compris les chômeurs et les militaires.

[69] La population active agricole a été classée d'après le mode de tenure de la terre de la façon suivante:

a) Cultivateurs possédant toute la terre qu'ils cultivent;
b) Cultivateurs possédant une partie de la terre qu'ils cultivent et louant l'autre partie;
c) Cultivateurs louant toute la terre qu'ils cultivent;
d) Cultivateurs louant la terre qu'ils cultivent et louant également leurs services;
e) Manoeuvres agricoles sans terre;

Dans le tableau, les quatre premières catégories ont été classées comme "Travailleurs à leur propre compte" et la dernière comme "Employés". N'ont été considérés comme employeurs que les personnes ayant cette situation dans la "Sylviculture et pêche". Les bergers, le personnel des fermes laitières, les éleveurs de volaille et les pépiniéristes, etc., qui font partie de la population active non agricole n'ont pas été classés d'après la situation dans la profession et figurent dans la colonne "Inclassable ailleurs".

* Provisoire.

[2] Les cadres supérieurs sont classés avec les "Employeurs" et non avec les "Employés".

[3] Personnes de 14 ans et plus seulement.

[10] Population de droit.

[79] Y compris 39 personnes de moins de 15 ans, dont 29 du sexe masculin et 10 du sexe féminin.

[80] Y compris les épouses des exploitants agricoles, industriels ou commerciaux qui aident leur mari dans son travail.

[81] Non compris les communes de Tende et de Brigue cédées par l'Italie en 1947.

[82] Les "Travailleurs familiaux non rémunérés" sont classés en partie avec les "Employeurs" et en partie avec les "Employés".

[10] *De jure* population.
[15] Limited to population 15 years of age and over.
[95] Storage presumably distributed among other Divisions.
[96] Quarrying included with Manufacturing (Division 2-3) rather than with Mining and quarrying (Division 1).
[97] Excluding Northern Ireland.
[98] Data based on a 1 per cent sample of census returns.

16. Population active selon la branche d'activité économique, la situation dans la profession et le sexe (suite)

[10] Population de droit.
[15] Personnes de 15 ans et plus seulement.
[95] Les entrepôts sont probablement répartis entre les autres branches.
[96] Les carrières (pierre, argile, sable, etc.) et industries annexes sont classées avec les Industries manufacturières (Branches 2-3) et non avec les Industries extractives (Branche 1).
[97] Non compris l'Irlande du Nord.
[98] Données reposant sur un sondage à 1 pour cent des réponses au questionnaire de recensement.

[3] Limited to population 14 years of age and over.
[10] *De jure* population.
[15] Limited to population 15 years of age and over.
[99] Data are a preliminary tabulation based on a 2 per cent sample of census returns.
[100] Including 323 000 persons under 15 years of age, of which 163 000 males and 160 000 females. Because of rounding, totals are not in all cases the sum of the parts.
[101] Electricity, gas, water and sanitary services (Division 5) included with Not classifiable elsewhere (Division 9).

[3] Personnes de 14 ans et plus seulement.
[10] Population de droit.
[15] Personnes de 15 ans et plus seulement.
[99] Données fournies par une exploitation préliminaire reposant sur un sondage à 2 pour cent des réponses au questionnaire de recensement.
[100] Y compris 323 000 personnes de moins de 15 ans, dont 163 000 du sexe masculin et 160 000 du sexe féminin. Comme les chiffres ont été arrondis, les totaux ne correspondent pas toujours à la somme des éléments.
[101] L'Electricité, le gaz, l'eau et les services sanitaires (Branche 5) sont classés avec les industries inclassables ailleurs (Branche 9).

[7] Data based on a 4 per cent sample of census returns.

[8] Excluding Canal Zone and also tribal Indian population numbering 48 654.

[9] *De jure* population, but including US armed forces stationed in the area.

[10] Slight discrepancy between this and corresponding total derived from single-year populations, shown in Table 11, result of errors in data processing.

[7] Données reposant sur un sondage à 4 pour cent des réponses au questionnaire de recensement.

[8] Non compris la Zone du Canal et également les indiens groupés en tribus, au nombre de 48 654.

[9] Population de droit, mais y compris les forces armées américaines en garnison dans la région.

[10] La légère disparité entre cette donnée et le total correspondant dérivé de répartitions de la population par année d'âge, publié dans le tableau 11, provient d'erreurs dans l'exploitation des données.

[11] Data are female population ever married, i.e., married, widowed, divorced and separated.
[12] Data based on a sample (about 2.2 per cent) of census returns.
[13] *De jure* population, but excluding armed forces outside continental United States and civilian citizens absent from country for extended periods of time.
[14] *De jure* population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.
[15] "Children" refers to the total of live births and stillbirths.

[11] Les données se rapportent aux femmes mariées ou qui l'ont été, c'est-à-dire, veuves, divorcées, et séparées.

[12] Données reposant sur un sondage (environ 2,2 pour cent) des réponses au questionnaire de recensement.

[13] Population de droit, mais non compris les membres des forces armées hors des Etats Unis continentaux et les civils absents du pays pour de longues périodes.

[14] Population de droit effectivement dénombrée, c'est-à-dire, non compris un ajustement de 1 pour cent pour compenser les lacunes du recensement.

[15] Le terme "enfants" désigne l'ensemble des naissances vivantes et des morts-nés.

17. Female population by age and size of family (number of children born alive) (continued)

[2] Data are married female population only.
[3] Data are female population who have borne children.
[20] Data based on a sample of census returns. Totals are not in all cases the sum of the parts.
[21] Japanese nationals only, in territory excluding the Amami Islands, acquired from the Ryukyu Islands between 1951 and 1953.
[22] Data based on a 10 per cent sample of census returns. Because of rounding, totals are not in all cases the sum of the parts.
[23] Excluding nomadic aborigines, transients afloat, non-resident military personnel and enemy prisoners of war.

[2] Data are married female population only.
[11] Data are female population ever married, i.e., married, widowed, divorced and separated.
[25] De jure population.
[27] Excluding communes of Tende and Brigue, ceded by Italy in 1947, with a population numbering 2 848 at 1954 census.
[28] Age classification based on year of birth rather than on completed years of age.
[29] Reason for slight discrepancy between totals by age and corresponding figures shown elsewhere not ascertained.
[30] "Children" refers to live births during existing marriage.
[31] Data are married female population, but exclude women whose husbands were missing or prisoners of war.

[2] Les données se rapportent aux femmes mariées seulement.
[11] Les données se rapportent aux femmes mariées ou qui l'ont été, c'est-à-dire, veuves, divorcées, et séparées.
[25] Population de droit.
[27] Non compris les communes de Tende et de Brigue cédées par l'Italie en 1947, avec 2 848 habitants au recensement de 1954.
[28] Répartition par âge établie à partir de l'année de naissance plutôt que d'après l'âge calculé en années révolues.
[29] L'origine de la légère disparité entre les totaux par âge et les chiffres correspondants publiés ailleurs n'a pu être déterminée.
[30] Le terme "enfants" designe les naissances vivantes survenues pendant le mariage en cours.
[31] Les données se rapportent aux femmes mariées, non compris celles dont les maris ont été portés disparus ou étaient prisonniers de guerre.

[2] Data are married female population only.
[11] Data are female population ever married, i.e., married, widowed, divorced and separated.
[25] *De jure* population.
[30] "Children" refers to live births during existing marriage.
[32] Excluding villages of Elten and Tüddern, ceded by Germany in 1949, with population estimated at 9 000 at time of transfer.
[33] Data are married female population in first marriage. Data for women married more than once are as follows: number reporting no children, 74 914; number reporting children, 75 337; total number of children born alive, 209 333.
[34] Data are married female population, but exclude 11 081 women for whom information was either incomplete or inapplicable.
[35] Includes 89 488 single females, 47 632 of whom have borne one child and 41 856 of whom two or more children.
[36] Data based on a 1 per cent sample of census returns.

[2] Data are married female population only.
[25] De *jure* population.
[30] "Children" refers to live births during existing marriage.
[36] Data based on a 1 per cent sample of census returns.
[37] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in 1954, with a population estimated at 62 725 in 1953.
[38] Data are a preliminary tabulation based on a 2 per cent sample of census returns. Because of rounding, totals are not in all cases the sum of the parts.
[39] Excluding full-blooded aborigines, estimated at 47 000 in 1944.
[40] Data are married female population, but exclude 86 504 women for whom classification by children ever born was not available.

17. Population féminine selon l'âge et la dimension de la famille (nombre d'enfants nés vivants) (suite)

[10] La légère disparité entre cette donnée et le total correspondant dérivé des répartitions de la population par année d'âge, publié dans le tableau 11, provient d'erreurs dans l'exploitation des données.

[29] L'origine de la légère disparité entre les totaux par âge et les chiffres correspondants publiés ailleurs n'a pu être déterminée.

[41] Non compris 55 femmes figurant sous la rubrique "Autres citoyens de l'Union Française d'Outre-Mer."

[3] Data are female population who have borne children.
[5] Data are female population ever married, but excluding women who have borne no children and those who have borne an unknown number of children.
[6] *De jure* population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.
[7] Excluding Amerindians of remote districts, numbering 6 023.
[8] Data based on a sample of census returns. Totals are not in all cases the sum of the parts.

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude live-born infants dying before registration of birth.

[3] Statistics based on baptisms recorded in church registers.

[4] European, Indian and Coloured, together comprising about one per cent of total population.

[5] Estimated rate for the total population is 31.5 according to recent surveys.

[6] For 1922-24.

[7] Registration not compulsory; believed to be complete for non-indigenous population only, which represents a relatively small proportion of the total.

[8] Bathurst (Colony) only.

[9] Compulsory registration areas, which include about one-tenth of total population.

[10] Reliability of rates affected by movements of population to and from areas where registration is compulsory.

[11] For 1931-34.

[12] "Non-Moroccan" population. Rates computed on population excluding personnel in military establishments.

[13] Civil registration system for Moslem population introduced 1 July 1954.

[14] Lagos only.

[15] Estimated rate for indigenous population was 59.0 according to sample census of 1950.

[16] Registration system for African population introduced in 1947.

[17] Estimated rate for indigenous population was 46.2 according to sample census of 1948.

[18] Estimated rate for indigenous population was 42.9 in 1949.

[19] Freetown and the rest of the Colony only.

[20] Former mandated territory (Union of South Africa).

[21] Data exclude live-born infants dying within 24 hours of birth.

19. Naissances vivantes 1946–1954 et taux bruts de natalité 1920–34 et 1946–1954

[Les taux représentent le nombre de naissances vivantes pour 1 000 habitants. Voir explications à la page 82.]

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année la naissance.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrement irréguliers.

[2] Les données ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[3] Statistiques établies d'après les baptêmes inscrits sur les registres de l'église.

[4] Européens, indiens et métis représentant ensemble 1 pour cent environ de la population totale.

[5] Des enquêtes récentes ont permis d'estimer à 31,5 pour 1 000 le taux se rapportant à la population totale.

[6] Pour 1922-24.

[7] L'enregistrement des naissances est facultatif; il n'est considéré comme complet que pour la population non indigène représentant une proportion relativement faible de la population totale.

[8] Bathurst (Colonie) seulement.

[9] Naissances signalées dans les régions où l'enregistrement est obligatoire et qui comprennent un dixième environ de la population totale.

[10] La qualité des taux est altérée par des mouvements de population en provenance et en direction des territoires où l'enregistrement est obligatoire.

[11] Pour 1931-34.

[12] Population "non marocaine". La population à partir de laquelle les taux ont été calculés ne comprend pas les militaires dans les casernes.

[13] Un système d'enregistrement pour la population musulmane est entré en vigueur le 1er juillet 1954.

[14] Lagos seulement.

[15] Le recensement par sondage de 1950 a permis d'estimer à 59 pour 1 000 le taux se rapportant à la population indigène.

[16] Un système d'enregistrement pour la population africaine est entré en vigueur en 1947.

[17] Le recensement par sondage de 1948 a permis d'estimer à 46,2 pour 1 000 le taux se rapportant à la population indigène.

[18] Le taux se rapportant à la population indigène a été estimé à 42,9 pour 1 000 en 1949.

[19] Freetown et le reste de la Colonie seulement.

[20] Territoire auparavant sous mandat (Union Sud-Africaine).

[21] Les données ne comprennent pas les enfants nés vivants décédés dans les 24 heures.

19. Live births and crude birth rates (continued)

[See headnote on page 608.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude live-born infants dying before registration of birth.

[6] For 1922-24.

[11] For 1931-34.

[21] Data exclude live-born infants dying within 24 hours of birth.

[22] Registration among Moslem population very incomplete.

[23] According to test of birth registration, 92.1 per cent complete in 1950.

[24] Computed on civilian population.

[25] Civilian population only.

[26] For 1921-24

[27] Data include births to Canadian residents temporarily in the United States; exclude birth to US residents temporarily in Canada.

[28] According to test of birth registration, 98 per cent complete in 1941.

[29] Beginning 1948, data are births registered in year of occurrence, believed to comprise 75-80 per cent of total yearly occurrences.

[30] Coverage improved in recent years.

[31] Data include stillbirths.

[32] Data include upward adjustments for underregistration as follows: 1930-1939, 3 per cent; 1940-1949, 2 per cent; 1950, 1.5 per cent.

[33] For 1926-29.

[34] For 1930-32.

[35] For 1926-27.

19. Naissances vivantes et taux bruts de natalité (suite)

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt quà l'année de la naissance.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrement irréguliers.

[2] Les données ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[6] Pour 1922-24.

[11] Pour 1931-34.

[21] Les données ne comprennent pas les enfants nés vivants décédés dans les 24 heures.

[22] Enregistrement très incomplet pour la population musulmane.

[23] Une évaluation du système a permis de conclure que l'enregistrement des naissances était complet dans une proportion de 92,1 pour cent en 1950.

[24] Taux calculé d'après la population civile.

[25] Population civile seulement.

[26] Pour 1921-24.

[27] Les données comprennent les naissances d'enfants de Canadiens résidant provisoirement aux Etats-Unis; elles ne comprennent pas les naissances d'enfants de résidents américains temporairement au Canada.

[28] Une évaluation du système a permis de conclure que l'enregistrement des naissances était complet dans une proportion de 98 pour cent en 1941.

[29] Depuis 1948, les données se rapportent aux enregistrements suivant l'année de la naissance qui sont considérés ne comprendre que 75 à 80 pour cent de l'ensemble des naissances survenues chaque année.

[30] Portée des données améliorée les dernières années.

[31] Les données comprennent les mort-nés.

[32] Les données ont été ajustées dans la proportion suivante pour compenser les lacunes de l'enregistrement: 1930-1939, 3 pour cent; 1940-1949, 2 pour cent; 1950, 1,5 pour cent.

[33] Pour 1926-29.

[34] Pour 1930-32.

[35] Pour 1926-27.

19. Live births and crude birth rates (continued)

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude live-born infants dying before registration of birth.

[3] Statistics based on baptisms recorded in church registers.

[6] For 1922-24.

[11] For 1931-34.

[21] Data exclude live-born infants dying within 24 hours of birth.

[24] Computed on civilian population.

[26] For 1921-24.

[31] Data include stillbirths.

[36] Coverage notably incomplete.

[37] Beginning 1948, Curaçao, Aruba and Bonaire only, and data exclude live-born infants dying before registration of birth.

[38] For 1933-34.

[39] Excluding tribal Indian population, and also data for Canal Zone shown separately above.

[40] Beginning 1951, final tabulations are based on a 50 per cent sample.

[41] According to test of birth registration, 86.5 per cent complete in 1940.

[42] According to test of birth registration, 92.5 per cent complete in 1940 and 97.9 per cent in 1950.

[43] For birth-registration states only; by 1932, these states included 95 per cent of total population.

[44] For 1932-34.

[45] For 1922-23.

[46] For 1925, 1927-29.

[47] Registration estimated to be 97 per cent complete.

[48] Compulsory civil registration system introduced in 1940.

[49] Beginning 1948, excluding Amerindians estimated at 18 140 in 1953.

[50] 1920-34: rates based on births registered within 2 years of occurrence; 1946-1950: data are estimates, based on population enumerated at 1952 census and death statistics 1946-1952; 1951-1953: data are births by date of occurrence, but include an upward adjustment for under-registration of 8.8 per cent for 1951 and 5 per cent for 1952 and 1953.

[51] Data exclude births in Galápagos Islands and provinces of Napo Pastaza and Santiago Zamora, but rates are computed on total population.

[52] Excluding Indian jungle population, estimated at 350 000.

[53] Excluding Negro and Indian population of the interior, estimated at 11 200 in 1920, 25 700 in 1946-51 and 26 000 in 1952.

[54] For Paramaribo (capital) only, comprising about 41 per cent of total population.

[55] Excluding Indian jungle population, estimated at 56 700 in 1950.

19. Naissances vivantes et taux bruts de natalité (suite)

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrement irréguliers.

[2] Les données ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[3] Statistiques établies d'après les baptêmes inscrits sur les registres de l'église.

[6] Pour 1922-24.

[11] Pour 1931-34.

[21] Les données ne comprennent pas les enfants nés vivants décédés dans les 24 heures.

[24] Taux calculé d'après la population civile.

[26] Pour 1921-24.

[31] Les données comprennent les mort-nés.

[36] Données très incomplètes.

[37] Depuis 1948, les données se rapportent à Curaçao, Aruba et Bonaire seulement, et ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[38] Pour 1933-34.

[39] Non compris les indiens groupés en tribus et, également, la Zone du Canal qui figure séparément ci-dessus.

[40] Depuis 1951, les chiffres définitifs reposent sur un sondage à 50 pour cent.

[41] Une évaluation du système a permis de conclure que l'enregistrement des naissances était complet dans une proportion de 86,5 pour cent en 1940.

[42] Une évaluation du système a permis de conclure que l'enregistrement des naissances était complet dans une proportion de 92,5 pour cent en 1940 et de 97,9 pour cent en 1950.

[43] Pour les états pratiquant l'enregistrement des naissances seulement; en 1932, ces états comprenaient 95 pour cent de la population totale.

[44] Pour 1932-34.

[45] Pour 1922-23.

[46] Pour 1925, 1927-29.

[47] Enregistrement des naissances considéré comme complet dans une proportion de 97 pour cent.

[48] L'enregistrement obligatoire est entré en vigueur en 1940.

[49] Depuis 1948, non compris les Amérindiens estimés à 18 140 en 1953.

[50] 1920-1934: taux reposant sur des naissances enregistrées dans un délai de 2 ans; 1946-1950: les données sont des estimations reposant sur la population dénombrée au recensement de 1952 et sur les statistiques des décès de la période 1946-1952; 1951-1953: les données se rapportent à la date de la naissance mais comprennent un ajustment pour compenser les lacunes de l'enregistrement évaluées à 8,8 pour cent pour 1951 et 5 pour cent pour 1952 et 1953.

[51] Non compris les îles Galápagos et les provinces de Napo Pastaza et de Santiago Zamora, mais les taux ont été calculés d'après la population totale.

[52] Non compris la population indienne de la jungle estimée à 350 000 personnes.

[53] Non compris la population nègre et indienne de l'intérieur estimée à 11 200 en 1920, 25 700 en 1946-51 et 26 000 en 1952.

[54] Pour Paramaribo seulement qui est la capitale et comprend environ 41 pour cent de la population totale du pays.

[55] Non compris la population indienne de la jungle estimée à 56 700 personnes en 1950.

19. Live births and crude birth rates (continued)

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude live-born infants dying before registration of birth.

[6] For 1922-24.

[7] Registration not compulsory; believed to be complete for non-indigenous population only, which represents a relatively small proportion of the total.

[26] For 1921-24.

[31] Data include stillbirths.

[33] For 1926-29.

[44] For 1932-34.

[56] Colony only.

[57] Prior to 1940, registration area only, comprising 82.5 per cent of total population at 1931 census. Beginning 1947, certain towns only, numbering 60 in 1951 and 1953, and 62 in 1952, and having a population of approximately 1.3 million.

[58] According to test of birth registration, 89 per cent complete in 1953.

[59] Beginning 1949, excluding foreigners. Data exclude births among tribal aborigines, but rates are computed on population including them.

[60] Rates computed on civilian population.

[61] Prior to 1947, registration area of former British Provinces, comprising approximately 75 per cent of former India, not including Burma. Beginning 1947, registration area of Republic of India, not including French India which became a part of India 1 November 1954.

[62] Excludes data for States of Ajmer, Bihar and Madhya Pradesh.

[63] In Java and Madura only.

[64] Prior to 1950, years ended 21 March.

[65] Excluding Bedouin population in the Negev.

[66] Prior to 1948, Jewish population of Palestine.

[67] Japanese nationals in Japan only. Prior to 1953, excluding Amami Islands, acquired from Ryukyu Islands between 1951 and 1953.

[68] Registration estimated to be 90 per cent complete.

[69] For East Jordan only.

[70] Lebanese nationals only.

[71] Includes data for Singapore.

[72] Registration area only, comprising about 90 per cent of total population.

[73] Settled Moslem population of territory formerly under British mandate. For births and birth rates among Jewish population, see Israel above.

[74] Present territory, i.e., excluding Amami Islands, which reverted to Japan between 1951 and 1953.

[75] Includes data for Amami Islands.

[76] Registration has improved under Registration Ordinance, operative since 1949, and is now believed to be 80 per cent complete.

[77] For Singapore Island only.

[78] Excluding nomad and semi-nomad population, estimated at 288 400 in 1945.

19. Naissances vivantes et taux bruts de natalité (suite)

[Voir note explicative à la page 609.]

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrement irréguliers.

[2] Les données ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[6] Pour 1922-24.

[7] L'enregistrement des naissances est facultatif; il n'est considéré comme complet que pour la population non-indigène représentant une proportion relativement faible de la population totale.

[26] Pour 1921-24.

[31] Les données comprennent les mort-nés.

[33] Pour 1926-29.

[44] Pour 1932-34.

[56] Colonie seulement.

[57] Avant 1940, territoire d'enregistrement seulement, comprenant 82,5 pour cent de la population totale au recensement de 1931. Depuis 1947, quelques villes seulement s'élevant à 60 en 1951 et 1953, à 62 en 1952, avec une population de 1 300 000 habitants environ.

[58] Une évaluation du système a permis de conclure que l'enregistrement des naissances était complet dans une proportion de 89 pour cent en 1953.

[59] A partir de 1949, non compris les étrangers. Les données ne comprennent pas les naissances parmi les tribus aborigènes, mais les taux ont été calculés d'après un chiffre de population les englobant.

[60] Taux calculés d'après la population civile.

[61] Avant 1947, territoire d'enregistrement des anciennes provinces britanniques, représentant approximativement 75 pour cent de l'Inde avant le partage, non compris la Birmanie. Depuis 1947, territoire d'enregistrement de la république de l'Inde, non compris l'Inde française qui fait partie de l'Inde depuis le 1er novembre 1954.

[62] Non compris les Etats d'Ajmer, de Bihar et de Madhya Pradesh.

[63] A Java et Madoura seulement.

[64] Avant 1950, années terminées le 21 mars.

[65] Non compris les bédouins du Negev.

[66] Avant 1948, population juive de la Palestine.

[67] Nationaux japonais au Japon seulement. Avant 1953, non compris les îles Amami détachées de îles Ryû-Kyû entre 1951 et 1953.

[68] Enregistrement considéré comme complet dans la proportion de 90 pour cent.

[69] Pour la Jordanie orientale seulement.

[70] Nationaux libanais seulement.

[71] Y compris Singapour.

[72] Territoire d'enregistrement seulement, comprenant environ 90 pour cent de la population totale.

[73] Population musulmane du territoire auparavant sous mandat britannique, à l'exclusion des nomades. Pour les naissances et les taux de natalité parmi la population juive, voir Israël ci-dessus.

[74] Territoire actuel, c'est-à-dire, non compris les îles Amami rendues au Japon entre 1951 et 1953.

[75] Y compris les îles Amami.

[76] L'enregistrement s'est amélioré depuis l'entrée en vigueur de l'Ordonnance d'Enregistrement en 1949 et est à présent considéré comme complet dans une proportion de 80 pour cent.

[77] Ile de Singapour exclusivement.

[78] Non compris les nomades et semi-nomades estimés à 288 400 en 1945.

19. Live births and crude birth rates (continued)

[See headnote on page 608.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[21] Data exclude live-born infants dying within 24 hours of birth.

[26] For 1921-24.

[44] For 1932-34.

[60] Rates computed on civilian population.

[79] Excludes data for Southern Dobruja.

[80] Prior to 1948, excluding territory ceded by Hungary in 1947.

[81] Not computed by the Statistical Office of the United Nations.

[82] Excludes data for civilian aliens living in Denmark without residence permits, numbering about 200 000 in 1945 and about 2 500 at the end of 1948.

[83] Prior to 1951, Finnish nationals in Finland only.

[84] Territory of 1937.

[85] Beginning 1951, West Berlin only.

[86] Prior to 1948, excluding Dodecanese.

[87] For 1928-29.

[88] Prior to 1948, including territory ceded to Czechoslovakia in 1947.

[89] Data are births registered within one year of occurrence.

[90] 1921-1934: territory of 1938. Beginning 1946, present territory, including that part of the former Free Territory of Trieste incorporated in October 1954.

[91] Rates computed on population excluding non-Maltese armed forces stationed in the area.

[92] Prior to 1949, excluding villages of Elten and Tüddern. Data include births occurring outside country if one or both parents are listed in a Netherlands population register.

[93] Data less reliable before 1950.

[94] Includes data for Southern Dobruja, Bessarabia and Northern Bucovina.

[95] Prior to 1947, territory defined by Treaty of Versailles. January 1947-April 1949, excluding the commune of Kirrberg.

[96] 1946-1949: rates computed on population including armed forces outside country and merchant seamen at sea. 1950: rates computed on population including merchant seamen at sea.

[97] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954. Prior to 1947, excluding also territory ceded by Italy in 1947.

[98] Coverage for 1947 and 1948 incomplete owing to reorganization of Registrar's Service.

19. Naissances vivantes et taux bruts de natalité (suite)

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrement irréguliers.

[21] Les données ne comprennent pas les enfants nés vivants décédés dans les 24 heures.

[26] Pour 1921-24.

[44] Pour 1932-34.

[60] Taux calculés d'après la population civile.

[79] Non compris la Dobroudja méridionale.

[80] Avant 1948, non compris le territoire cédé par la Hongrie en 1947.

[81] Ce taux n'a pas été calculé par le Bureau de statistique de l'Organisation des Nations Unies.

[82] Non compris les données pour les civils étrangers vivant au Danemark sans permis de séjour, environ 200 000 en 1945 et 2 500 fin 1948.

[83] Avant 1951, nationaux finlandais en Finlande seulement.

[84] Territoire de 1937.

[85] Depuis 1951, Berlin-Ouest seulement.

[86] Avant 1948, non compris le Dodécanèse.

[87] Pour 1928-29.

[88] Avant 1948, y compris le territoire cédé à la Tchécoslovaquie en 1947.

[89] Naissances enregistrées dans un délai d'un on.

[90] 1921-1934: territoire de 1938. Depuis 1946, territoire actuel, non compris la partie de l'ancien territoire de Trieste attribuée à l'Italie en octobre 1954.

[91] Taux calculés d'après un chiffre de population ne comprenant pas les militaires non maltais en garnison dans la région.

[92] Avant 1949, non compris les villages d'Elten et Tüddern. Les données comprennent les naissances survenues à l'étranger si l'un des parents au moins est portée sur un registre d'état civil néerlandais.

[93] Données moins complètes avant 1950.

[94] Y compris la Dobroudja du Sud, la Bessarabie et la Bukovine du Nord.

[95] Avant 1947, territoire du Traité de Versailles; janvier 1947-avril 1949, non compris la commune de Kirrberg.

[96] 1946-1949: taux calculés d'après un chiffre de population comprenant les forces armées hors du pays et les équipages de la marine marchande en mer. 1950: taux calculés d'après un chiffre de population comprenant les équipages de la marine marchande en mer.

[97] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954. Avant 1947, non compris également le territoire cédé par l'Italie en 1947.

[98] Données incomplètes pour 1947 et 1948 à la suite de la réorganisation des services de l'état civil.

19. Live births and crude birth rates (continued)

* Provisional.
† Data known to be by year of registration rather than by year of occurrence.
[1] Data exclude live-born infants dying before registration of birth. These births, the number of which is known for Belgium (1 202) and for France (3 544) are not tabulated by age of mother.
[2] "Non-Moroccan" population.
[3] Former mandated territory (Union of South Africa).
[4] Data exclude illegitimate live births.

* Provisoire.
† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[1] Les données ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance. Ces enfants, dont le nombre est connu pour la Belgique (1 202) et pour la France (3 544) n'ont pas été répartis d'après l'âge de le mère.
[2] Population "non marocaine".
[3] Territoire auparavant sous mandat (Union Sud-Africaine).
[4] Les données ne comprennent pas les naissances vivantes d'enfants illégitimes.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data exclude live-born infants dying before registration of birth. These births, the number of which is known for Belgium (1 202) and for France (3 544) are not tabulated by age of mother.

[26] Data are legitimate live births and stillbirths.

[27] Excluding territory ceded by Hungary in 1947.

[28] Age of mother obtained by subtracting year of birth of mother from year of registration of child's birth.

[29] Territory of 1937.

[30] Data include stillbirths. Age of mother obtained by subtracting year of birth of mother from year of birth of child or delivery of dead foetus.

[31] Age of mother obtained by subtracting year of birth of mother from year of birth of child.

[32] Excluding Dodecanese.

[33] Including territory ceded to Czechoslovakia in 1947.

[34] Present territory, including that part of the former Free Territory of Trieste incorporated in October 1954.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.

[1] Les données ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance. Ces enfants, dont le nombre est connu pour la Belgique (1 202) et pour la France (3 544) n'ont pas été répartis d'après l'âge de le mère.

[26] Les données se rapportent aux naissances vivantes et mort-nés légitimes.

[27] Non compris le territoire cédé par la Hongrie en 1947.

[28] L'âge de la mère a été obtenu en déduisant son année de naissance de l'année d'enregistrement de la naissance de l'enfant.

[29] Territoire de 1937.

[30] Les données comprennent les mort-nés. L'âge de la mère a été obtenu en déduisant son année de naissance de celle de l'enfant ou de celle de l'accouchement du foetus mort.

[31] L'âge de la mère a été obtenu en déduisant son année de naissance de celle de l'enfant.

[32] Non compris le Dodécanèse.

[33] Y compris le territoire cédé à la Tchécoslovaquie en 1947.

[34] Territoire actuel, non compris la partie de l'ancien Territoire de Trieste attribuée à l'Italie en octobre 1954.

20. Live births by age of mother (continued) — Naissances vivantes selon l'âge de la mère (suite)

* Provisional.
† Data known to be by year of registration rather than by year of occurrence.
[13] Data exclude live-born infants dying within 24 hours of birth. These births, the number of which is known for Spain (3 758) are not tabulated by age of mother.
[31] Age of mother obtained by subtracting year of birth of mother from year of birth of child.
[35] Data include births occurring outside country if one or both parents are listed in a Netherlands population register.
[36] Excluding Northern Transylvania.
[37] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954.
[38] Reason for discrepancy between this and corresponding figure in Table 19 not ascertained.
[39] Excluding full-blooded aborigines, estimated at 47 000 in 1944.

* Provisoire.
† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[13] Les données ne comprennent pas les enfants nés vivants décédés dans les 24 heures. Ces enfants, dont le nombre est connu pour l'Espagne (3 758), n'ont pas été répartis d'après l'âge de la mère.
[31] L'âge de la mère a été obtenu en déduisant son année de naissance de celle de l'enfant.
[35] Les données comprennent les enfants nés hors du pays si l'un des parents au moins est porté sur un registre d'état civil néerlandais.
[36] Non compris la Transylvanie du Nord.
[37] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954.
[38] L'origine de la disparité entre cette donnée et le chiffre correspondant du tableau 19 n'est pas connue.
[39] Non compris les purs aborigènes estimés à 47 000 en 1944.

† Data known to be by year of registration rather than by year of occurrence.
[1] Rates based on live births to women of all ages but computed on female population aged 10-49.
[2] Rates based on live births to women under 15 years of age but computed on female population aged 10-14.
[3] Rates based on live births to women aged 45 and over but computed on female population aged 45-49.
[4] Rates exclude live-born infants dying before registration of birth.
[5] "Non-Moroccan" population.
[6] Former mandated territory (Union of South Africa).
[7] Rates exclude live-born infants dying within 24 hours of birth.
[8] Rates include births of Tunisian children to European mothers.
[9] Excluding Yukon, Northwest Territories and Newfoundland. Rates include births to Canadian residents temporarily in the United States; exclude births to US residents temporarily in Canada.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[1] Les taux reposent sur l'ensemble des naissances vivantes ("Tous âges") mais ont été calculés d'après la population féminine de 10 à 49 ans.
[2] Les taux reposent sur le nombre d'enfants nés vivants de femmes au-dessous de 15 ans mais ont été calculés d'après la population féminine de 10 à 14 ans.
[3] Les taux reposent sur le nombre d'enfants nés vivants de femmes âgées de 45 ans et plus mais ont été calculés d'après la population féminine de 45 à 49 ans.
[4] Les taux ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[5] Population "non marocaine".
[6] Territoire auparavant sous mandat (Union Sud-Africaine).
[7] Les taux ne comprennent pas les enfants nés vivants décédés dans les 24 heures.
[8] Les taux comprennent les naissances d'enfants tunisiens de mères européennes.
[9] Non compris le Yukon, les Territoires du Nord-Ouest et Terre-Neuve. Les taux comprennent les naissances d'enfants de Canadiens résidant temporairement aux Etats-Unis; ils ne comprennent pas les naissances d'enfants de résidents américains temporairement au Canada.

† Data known to be by year of registration rather than by year of occurrence.
[1] Rates based on live births to women of all ages but computed on female population aged 10-49.
[2] Rates based on live births to women under 15 years of age but computed on female population aged 10-14.
[3] Rates based on live births to women aged 45 and over but computed on female population aged 45-49.
[10] Rates based on confinements resulting in live births.
[16] Excluding tribal aborigines and foreigners.
[17] Rates based on confinements resulting in live births but exclude those of mothers of unknown age.
[18] Japanese nationals in present territory, i.e., including Amami Islands, acquired from Ryukyu Islands 25 December 1953.
[19] Present territory, i.e., excluding Amami Islands, which reverted to Japan 25 December 1953.
[20] Rates based on births in Singapore Island only, but computed on total population.
[21] Age-specific rates exclude live-born infants dying before registration of birth.
[22] Age of mother obtained by subtracting year of birth of mother from year of registration of child's birth.
[23] Territory of 1937.
[24] Data include stillbirths. Age of mother obtained by subtracting year of birth of mother from year of birth of child or delivery of dead foetus.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[1] Les taux reposent sur l'ensemble des naissances vivantes ("Tous âges") mais ont été calculés d'après la population féminine de 10 à 49 ans.
[2] Les taux reposent sur le nombre d'enfants nés vivants de femmes au-dessous de 15 ans mais ont été calculés d'après la population féminine de 10 à 14 ans.
[3] Les taux reposent sur le nombre d'enfants nés vivants de femmes âgées de 45 ans et plus mais ont été calculés d'après la population féminine de 45 à 49 ans.
[10] Les taux reposent sur les accouchement d'enfants nés vivants.
[16] Non compris les aborigènes groupés en tribus et les étrangers.
[17] Les taux reposent sur les accouchements d'enfants nés vivants à l'exclusion de ceux de mères d'âge inconnu.
[18] Nationaux japonais sur le territoire actuel, c'est-à-dire, y compris les îles Amami détachées des îles Ryû-Kyû le 25 décembre 1953.
[19] Territoire actuel, c'est-à-dire, non compris les îles Amami rendues au Japon le 25 décembre 1953.
[20] Taux reposant sur les naissances survenues dans l'île de Singapour, seulement, mais calculés d'après la population totale.
[21] Les taux par âge ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[22] L'âge de la mère a été obtenu en déduisant son année de naissance de l'année d'enregistrement de la naissance de l'enfant.
[23] Territoire de 1937.
[24] Les données comprennent les mort-nés. L'âge de la mère a été obtenu en déduisant son année de naissance de celle de l'enfant ou de celle de l'accouchement du foetus mort.

* Provisional.
† Data known to be by year of registration rather than by year of occurrence.
[1] Rates based on live births to women of all ages but computed on female population aged 10-49.
[2] Rates based on live births to women under 15 years of age but computed on female population aged 10-14.
[3] Rates based on live births to women aged 45 and over but computed on female population aged 45-49.
[25] Age of mother obtained by subtracting year of birth of mother from year of birth of child.
[26] Rates not computed by the Statistical Office of the United Nations.
[27] Present territory, including that part of the former Free Territory of Trieste incorporated in October 1954.
[28] Rates include births occurring outside country if one or both parents are listed in a Netherlands population register.
[29] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954.

* Provisoire.
† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[1] Les taux reposent sur l'ensemble des naissances vivantes ("Tous âges") mais ont été calculés d'après la population féminine de 10 à 49 ans.
[2] Les taux reposent sur le nombre d'enfants nés vivants de femmes au-dessous de 15 ans mais ont été calculés d'après la population féminine de 10 à 14 ans.
[3] Les taux reposent sur le nombre d'enfants nés vivants de femmes âgées de 45 ans et plus mais ont été calculés d'après la population féminine de 45 à 49 ans.
[25] L'âge de la mère a été obtenu en déduisant son année de naissance de celle de l'enfant.
[26] Les taux n'ont pas été calculés par le Bureau de statistique de l'Organisation des Nations Unies.
[27] Territoire actuel, y compris la partie de l'ancien territoire de Trieste attribuée à l'Italie en octobre 1954.
[28] Les taux comprennent les enfants nés hors du pays si l'un des parents au moins est porté sur un registre d'état civil néerlandais.
[29] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954.

21. Birth rates specific for age of mother (continued) — Taux de natalité selon l'âge de la mère (suite)

† Data known to be by year of registration rather than by year of occurrence.
[1] Data exclude illegitimate live births and legitimate live-born infants dying before registration of birth.
[2] Birth order based on number of previous live births and stillbirths.
[3] "Non-Moroccan" population.
[4] Basis for birth-order calculation not ascertained.
[5] Data exclude illegitimate live births.
[6] Excluding Yukon, Northwest Territories and Newfoundland. Data include births to Canadian residents temporarily in the United States; exclude births to US residents temporarily in Canada.
[7] Data are live births registered in 1954 which occurred after 22 May 1950.
[8] Data are confinements resulting in live births.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[1] Les données ne comprennent pas les naissances vivantes illégitimes et les enfants légitimes nés vivants décédés avant l'enregistrement de leur naissance.
[2] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs.
[3] Population "non marocaine".
[4] La base de calcul du rang de naissance n'a pu être déterminée.
[5] Les données ne comprennent pas les naissances vivantes illégitimes.
[6] Non compris le Yukon, les Territoires du Nord-Ouest et Terre-Neuve. Les données comprennent les naissance d'enfants de Canadiens résidant provisoirement aux Etats-Unis; elles ne comprennent pas les naissances d'enfants de résidents américains temporairement au Canada.
[7] Les données se rapportent à des naissances vivantes enregistrées en 1954 mais survenues après le 22 mai 1950.
[8] Les données se rapportent aux accouchements d'enfants nés vivants.

† Data known to be by year of registration rather than by year of occurrence.
[1] Data exclude illegitimate live births and legitimate live-born infants dying before registration of birth.
[2] Birth order based on number of previous live births and stillbirths.
[4] Basis for birth-order calculation not ascertained.
[12] Data exclude live births among Bedouin population in the Negev.
[13] Japanese nationals in present territory, i.e., including Amami Islands, acquired from Ryukyu Islands 25 December 1953.
[14] Settled Moslem population of territory formerly under British mandate. For births among Jewish population, see Israel above.
[15] Data are confinements resulting in live births or stillbirths.
[16] Data exclude reported live births for which copy of certificate not received in central office.
[17] Bangkok and Thonburi municipalities only.
[18] Data are legitimate live births and stillbirths.
[19] Birth order based on number of previous legitimate and legitimized live births and stillbirths during existing marriage.
[20] Birth order based on number of previous live births during existing marriage.
[21] Excluding territory ceded by Hungary in 1947.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[1] Les données ne comprennent pas les naissances vivantes illégitimes et les enfants légitimes nés vivants décédés avant l'enregistrement de leur naissance.
[2] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs.
[4] La base de calcul du rang de naissance n'a pu être déterminée.
[12] Non compris les naissances vivantes parmi les bédouins du Negev.
[13] Ressortissants japonais sur le territoire actuel, c'est-à-dire, y compris les îles Amamî détachées des îles Ryû-Kyû le 25 décembre 1953.
[14] Population musulmane du territoire auparavant sous mandat brittannique, à l'exclusion des nomades. Pour les naissances parmi la population juive, voir Israël ci-dessus.
[15] Les données se rapportent aux accouchements d'enfants nés vivants ou mort-nés.
[16] Les données ne comprennent pas les naissances vivantes signalées, pour lesquelles la copie de l'acte de naissance n'est pas parvenue au bureau central de statistique.
[17] Municipalités de Bangkok et Thonburi seulement.
[18] Les données se rapportent aux naissances vivantes et mort-nés légitimes.
[19] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs, légitimes et légitimés, du mariage en cours.
[20] Numéro d'ordre des naissances d'après le nombre de naissances vivantes antérieures du mariage en cours.
[21] Non compris le territoire cédé par la Hongrie en 1947.

† Data known to be by year of registration rather than by year of occurrence.
[1] Data exclude illegitimate live births and legitimate live-born infants dying before registration of birth.
[2] Birth order based on number of previous live births and stillbirths.
[5] Data exclude illegitimate live births.
[18] Data are legitimate live births and stillbirths.
[19] Birth order based on number of previous legitimate and legitimized live births and stillbirths during existing marriage.
[22] For legitimate live births, birth order based on number of previous legitimate and legitimized live births and stillbirths during existing marriage; for illegitimate live births, based on previous illegitimate live births and stillbirths.
[23] Data for territory of 1937.
[24] Excluding Dodecanese.
[25] Including territory ceded to Czechoslovakia in 1947.
[26] Present territory, including that part of the former Free Territory of Trieste incorporated in October 1954.
[27] Birth order based on number of previous live births and stillbirths during existing marriage.
[28] Data include births occurring outside country if one or both parents are listed in a Netherlands population register.
[29] Excluding Northern Transylvania.
[30] Birth order based on number of confinements resulting in live births or stillbirths.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[1] Les données ne comprennent pas les naissances vivantes illégitimes et les enfants légitimes nés vivants décédés avant l'enregistrement de leur naissance.
[2] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs.
[5] Les données ne comprennent pas les naissances vivantes illégitimes.
[18] Les données se rapportent aux naissances vivantes et mort-nés légitimes.
[19] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs, légitimes et légitimés, du mariage en cours.
[22] Pour les naissances vivantes d'enfants légitimes, numéro d'ordre d'après le nombre de naissances vivantes et mort-nés antérieurs, légitimes et légitimés, du mariage en cours. Pour les naissances vivantes d'enfants illégitimes, numéro d'ordre d'après les naissances vivantes et mort-nés illégitimes antérieurs.
[23] Données relatives au territoire de 1937.
[24] Non compris le Dodécanèse.
[25] Y compris le territoire cédé à la Tchécoslovaquie en 1947.
[26] Territoire actuel, y compris la partie de l'ancien territoire libre de Trieste attribuée à l'Italie en octobre 1954.
[27] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs du mariage en cours.
[28] Les données comprennent les naissances survenues hors du pays si l'un des parents au moins de l'enfant est inscrit sur un registre de population néerlandais.
[29] Non compris la Transylvanie du Nord.
[30] Numéro d'ordre des naissances d'après le nombre d'accouchements d'enfants nés vivante ou mort-nés.

* Provisional.
† Data known to be by year of registration rather than by year of occurrence.
[2] Birth order based on number of previous live births and stillbirths.
[5] Data exclude illegitimate live births.
[10] Data based on a 50 per cent sample.
[20] Birth order based on number of previous live births during existing marriage.
[27] Birth order based on number of previous live births and stillbirths during existing marriage.
[31] Data are confinements resulting in legitimate live births or stillbirths to women married once only.
[32] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954.
[33] Reason for discrepancy between this and corresponding figure in Table 19 not ascertained.
[34] Excluding full-blooded aborigines, estimated at 47 000 in 1944.
[35] Data are confinements resulting in legitimate live births.
[36] Birth order based on number of previous legitimate and legitimized live births during existing marriage.
[37] Birth order based on number of previous legitimate live births.

* Provisoire.
† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[2] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs.
[5] Les données ne comprennent pas les naissances vivantes illégitimes.
[10] Données reposant sur un sondage à 50 pour cent.
[20] Numéro d'ordre des naissances d'après le nombre de naissances vivantes antérieures du mariage en cours.
[27] Numéro d'ordre des naissances d'aprés le nombre de naissances vivantes et mort-nés antérieurs du mariage en cours.
[31] Les données se rapportent aux accouchements d'enfants légitimes nés vivants ou mort-nés par des femmes mariées une fois seulement.
[32] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954.
[33] L'origine de la disparité entre cette donnée et le chiffre correspondant du tableau 19 n'a pu être déterminée.
[34] Non compris les purs aborigènes estimés à 47 000 en 1944.
[35] Les données se rapportent aux accouchements d'enfants légitimes nés vivants.
[36] Numéro d'ordre des naissances d'après le nombre de naissances vivantes antérieures, légitimes et légitimées, du mariage en cours.
[37] Numéro d'ordre des naissances d'après le nombre de naissances vivantes légitimes antérieures.

23. Birth rates by live-birth order : latest available data

Taux de natalité selon la rang de naissance : dernières données disponibles

[Rates are the number of live births in each birth order per 1 000 female population aged 10–49 years. Live-birth order is based on the number of previous live births to the mother. For evaluation of quality of data, see code to Table 19 and discussion, page 34.

Les taux représentent le nombre de naissances vivantes de chaque rang pour 1 000 femmes de 10 à 49 ans. Le rang de naissance est calculé d'après le nombre d'enfants déjà nés vivants de la mère. Voir le code du tableau 19 et la page 85 pour des précisions sur la qualité des données.]

* Provisional.
† Data known to be by year of registration rather than by year of occurrence.
[2] Birth order based on number of previous live births and stillbirths.
[10] Birth order based on number of previous legitimate and legitimized live births and stillbirths during existing marriage.
[11] Birth order based on number of previous live births during existing marriage.
[14] Rates exclude illegitimate live births.
[15] Including territory ceded to Czechoslovakia in 1947.
[16] Present territory, including that part of the former Free Territory of Trieste incorporated in October 1954.
[17] Birth order based on number of previous live births and stillbirths during existing marriage.
[18] Rates include births occurring outside country if one or both parents are listed in a Netherlands population register.
[19] Rates are confinements resulting in legitimate live births or stillbirths to women married once only.
[20] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954.

* Provisoire.
† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[2] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs.
[10] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs, légitimes et légitimés, du mariage en cours.
[11] Numéro d'ordre des naissances d'après le nombre de naissances vivantes antérieures du mariage en cours.
[14] Les taux ne comprennent pas les naissances vivantes d'enfants illégitimes.
[15] Y compris le territoire cédé à la Tchécoslovaquie en 1947.
[16] Territoire actuel, y compris la partie de l'ancien territoire libre de Trieste attribuée à l'Italie en octobre 1954.
[17] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs du mariage en cours.
[18] Les données comprennent les naissances survenues hors du pays si l'un des parents au moins de l'enfant est inscrit sur un registre de population néerlandais.
[19] Les taux se rapportent aux accouchements, d'enfants légitimes nés vivants ou mort-nés de femmes mariées une fois seulemant.
[20] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954.

23. Birth rates by live-birth order (continued) — Taux de natalité selon le rang de naissance (suite)

[See headnote on page 637. — Voir note explicative à la page 637.]

† Data known to be by year of registration rather than by year of occurrence.
[17] Birth order based on number of previous live births and stillbirths during existing marriage.
[21] Excluding full-blooded aborigines, estimated at 47 000 in 1944.
[22] Rates based on confinements resulting in legitimate live births.
[23] Birth order based on number of previous legitimate and legitimized live births during existing marriage.
[24] Birth order based on number of previous legitimate live births.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.
[17] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs du mariage en cours.
[21] Non compris les purs aborigènes estimés à 47 000 en 1944.
[22] Les taux reposent sur les accouchements d'enfants légitimes nés vivants.
[23] Numéro d'ordre des naissances d'après le nombre de naissances vivantes et mort-nés antérieurs, légitimes et légitimés, du mariage en cours.
[24] Numéro d'ordre des naissances d'après le nombre de naissances vivantes légitimes antérieures.

24. Stillbirths (late foetal deaths) and stillbirth ratios : 1946 – 1954

[Ratios are the number of stillbirths per 1 000 live births. Reliability and comparability of data known to be greatly affected by incomplete or irregular registration of stillbirths and/or live births, and by variations in stillbirth definitions. For evaluation of completeness of registration of live births, see Table 19; for stillbirth definitions, see discussion page 35.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Live-born infants dying before registration of birth are included among stillbirths but excluded from live births used in computation of ratios.

[2] Registration not compulsory; believed to be complete for non-indigenous population only, which represents a relatively small proportion of the total.

[3] Bathurst (Colony) only.

[4] Compulsory registration areas, which include about one-tenth of total population.

[5] "Non-Moroccan" population.

[6] Former mandated territory (Union of South Africa).

[7] Live-born infants dying within 24 hours of birth are included among stillbirths but excluded from live births used in computation of ratios.

[8] Data are deaths of foetuses of 5 or more months' gestation.

[9] Civilian population.

[10] Data include events among Canadian residents temporarily in the United States; exclude events among US residents temporarily in Canada.

24. Mort-nés (morts foetales tardives) et taux de mortinatalité : 1946 – 1954

[Les taux représentent le nombre de mort-nés (morts foetales tardives) pour 1 000 naissances vivantes. Qualité et comparabilité des données notablement affectées par un enregistrement incomplet ou irrégulier des mort-nés et/ou des naissances vivantes ainsi que par des variations dans la définition des mort-nés. Voir le tableau 19 pour des précisions sur le degré d'enregistrement des naissances vivantes; voir également les définitions relatives aux mort-nés à la page 85.]

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.

[1] Les enfants nés vivants décédés avant l'enregistrement de leur naissance sont compris avec les mort-nés, mais ils sont exclus des naissances vivantes utilisées pour le calcul des taux.

[2] L'enregistrement des naissances est facultatif; il n'est considéré comme complet que pour la population non indigène représentant une proportion relativement faible de la population totale.

[3] Bathurst (Colonie) seulement.

[4] Régions où l'enregistrement est obligatoire et qui comprennent un dixième environ de la population totale.

[5] Population "non marocaine"

[6] Territoire auparavant sous mandat (Union Sud-Africaine).

[7] Les enfants nés vivants décédés dans les 24 heures sont compris avec les mort-nés, mais ils sont exclus des naissances vivantes utilisées pour le calcul des taux.

[8] Les données se rapportent aux décès de foetus de 5 mois au moins.

[9] Population civile.

[10] Les données comprennent les mort-nés et les naissances vivantes parmi les Canadiens résidant provisoirement aux Etats-Unis; elles ne comprennent pas les mort-nés et les naissances vivantes parmi les résidents américains temporairement au Canada.

24. Stillbirths (late foetal deaths) and stillbirth ratios (continued)

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Live-born infants dying before registration of birth are included among stillbirths but excluded from live births used in computation of ratios.

[7] Live-born infants dying within 24 hours of birth are included among stillbirths but excluded from live births used in computation of ratios.

[8] Data are deaths of foetuses of 5 or more months' gestation.

[11] Beginning 1948, ratios computed on live births registered in year of occurrence.

[12] Ratios computed on live births tabulated by date of occurrence.

[13] For Curaçao, Aruba and Bonaire only.

[14] Excluding tribal Indian population, and also data for Canal Zone, shown separately above.

[15] Beginning 1951, ratios computed on births estimated from a 50 per cent sample.

[16] Ratios computed on live births which exclude live-born infants dying before registration of birth.

[17] Beginning 1948, excluding Amerindians, estimated at 18 140 in 1953.

[18] Ratios computed on live births which have been adjusted for under-registration. For details see Table 19.

[19] Statistics based on burial permits; ratios computed on number of baptisms recorded in church registers.

[20] Excluding Galápagos Islands and Provinces of Napo Pastaza and Santiago Zamora.

[21] Excluding Indian jungle population, estimated at 350 000. Statistics based on burial permits.

[22] Excluding Negro and Indian population of the interior, estimated at 11 200 in 1920, 25 700 in 1946-1951 and 26 000 in 1952.

[23] For Paramaribo (capital) only, comprising about 41 per cent of total population.

[24] Excluding Indian jungle population, estimated at 56 700 in 1950.

24. Mort-nés (morts foetales tardives) et taux de mortinatalité (suite)

[Voir note explicative à la page 643.]

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.

[1] Les enfants nés vivants décédés avant l'enregistrement de leur naissance sont compris avec les mort-nés, mais ils sont exclus des naissances vivantes utilisées pour le calcul des taux.

[7] Les enfants nés vivants décédés dans les 24 heures sont compris avec les mort-nés, mais ils sont exclus des naissances vivantes utilisées pour le calcul des taux.

[8] Les données se rapportent aux décès de foetus de 5 mois au moins.

[11] Depuis 1948, taux calculés d'après des naissances vivantes enregistrées l'année même de la naissance.

[12] Taux calculés d'après des naissances vivantes exploitées d'après la date de la naissance.

[13] Pour Curaçao, Aruba et Bonaire seulement.

[14] Non compris les indiens groupés en tribus et, également, la Zone du Canal qui figure séparément ci-dessus.

[15] Depuis 1951, les taux ont été calculés d'après des naissances estimées par sondage à 50 pour cent.

[16] Taux calculés d'après des naissances vivantes ne comprenant pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[17] Avant 1948, non compris les Amérindiens estimées à 18 140 en 1953.

[18] Taux calculés d'après des données (naissance vivantes) ajustées pour compenser les lacunes de l'enregistrement. Voir précisions complémentaires au tableau 19.

[19] Statistiques établies d'après les permis d'inhumer. Les taux ont été calculés à partir des baptêmes inscrits sur les registres de l'église.

[20] Non compris les îles Galápagos et les provinces de Napo Pastaza et Santiago Zamora.

[21] Non compris la population indienne de la jungle estimée à 350 000 personnes. Statistiques établies d'après les permis d'inhumer.

[22] Non compris la population nègre et indienne de l'intérieur estimée à 11 200 personnes en 1920, 25 700 en 1946-1951 et 26 000 en 1952.

[23] Pour Paramaribo seulement qui est la capitale et comprend environ 41 pour cent de la population totale du pays.

[24] Non compris la population indienne de la jungle estimée à 56 700 personnes en 1950.

24. Stillbirths (late foetal deaths) and stillbirth ratios (continued)

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[2] Registration not compulsory; believed to be complete for non-indigenous population only, which represents a relatively small proportion of the total.

[12] Ratios computed on live births tabulated by date of occurrence.

[25] Colony only.

[26] Certain towns only, numbering 60 in 1951 and 1953, and 62 in 1952, and having a population of approximately 1.3 million.

[27] Selected ("Proclaimed") urban areas in which the registrar is a medical practitioner. Ratios not computed by the Statistical Office of the United Nations and computed on births including stillbirths.

[28] Prior to 1947, registration area of former British Provinces, comprising approximately 75 per cent of former India, not including Burma. Beginning 1947, registration area of Republic of India, not including French India which became a part of India 1 November 1954.

[29] Excludes stillbirths in State of Coorg

[30] Excludes stillbirths in State of Assam.

[31] Prior to 1948, Jewish population of Palestine.

[32] Japanese nationals in Japan only. Prior to 1953, excluding Amami Islands acquired from Ryukyu Islands between 1951 and 1953. Data are deaths of foetuses of 3 or more months' gestation. Increases in registered data beginning 1947 attributable to legalization of induced termination of pregnancy.

[33] Prior to 1951, Singapore Island only.

[34] Excludes data for Alderney and Sark.

[35] Prior to 1948, excluding territory ceded by Hungary in 1947.

[36] Excludes data for civilian aliens living in Denmark without residence permits, numbering about 200 000 in 1945 and about 2 500 at the end of 1948.

[37] Prior to 1951, Finnish nationals in Finland only.

[38] Beginning 1951, West Berlin only.

[40] Prior to 1948, including territory ceded to Czechoslovakia in 1947.

[41] Present territory, including that part of the former Free Territory of Trieste incorporated in October 1954.

24. Mort-nés (morts foetales tardives) et taux de mortinatalité (suite)

[Voir note explicative à la page 643.]

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année de la naissance.

[2] L'enregistrement des naissances est facultatif; il n'est considéré comme complet que pour la population non indigène représentant une proportion relativement faible de la population totale.

[12] Taux calculés d'après des naissances vivantes exploitées d'après la date de la naissance.

[25] Colonie seulement.

[26] Quelques villes seulement s'élevant à 60 en 1951 et 1953, à 62 en 1952, avec une population de 1 300 000 habitants environ.

[27] Certaines régions urbaines particulières ("Proclaimed") dans lesquelles l'officier de l'état civil est un médecin. Ces taux, établis à partir de naissances comprenant les mort-nés, n'ont pas été calculés par le Bureau de Statistique de l'Organisation des Nations Unies.

[28] Avant 1947, territoire d'enregistrement des anciennes provinces britanniques, représentant approximativement 75 pour cent de l'Inde avant le partage, non compris la Birmanie. Depuis 1947, territoire d'enregistrement de la République de l'Inde, non compris l'Inde française qui fait partie de l'Inde depuis le 1er novembre 1954.

[29] Non compris les mort-nés dans l'état de Coorg.

[30] Non compris les mort-nés dans l'état d'Assam.

[31] Avant 1948, population juive de Palestine.

[32] Nationaux japonais au Japon seulement. Avant 1953, non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953. Les données se rapportent aux décès de foetus de 3 mois au moins. Augmentation des enregistrements depuis 1947 due à la promulgation d'une législation permettant l'interruption provoquée de la grossesse.

[33] Avant 1951, l'île de Singapour exclusivement.

[34] Non compris Sercq et Alderney.

[35] Avant 1948, non compris le territoire cédé par la Hongrie en 1947.

[36] Non compris les données pour les civils étrangers vivant au Danemark sans permis de séjour, environ 200 000 en 1945 et 2 500 fin 1948.

[37] Avant 1951, nationaux finlandais en Finlande seulement.

[38] Depuis 1951, Berlin-Ouest seulement.

[40] Avant 1948, y compris le territoire cédé à la Tchécoslovaquie en 1947.

[41] Territoire actuel, y compris la partie de l'ancien territoire libre de Trieste attribuée à l'Italie en octobre 1954.

24. Stillbirths (late foetal deaths) and stillbirth ratios (continued)

[See headnote on page 642.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[8] Data are deaths of foetuses of 5 or more months' gestation.

[15] Beginning 1951, ratios computed on births estimated from a 50 per cent sample.

[42] Prior to 1949, excluding villages of Elten and Tüddern. Data include events occurring outside country if one or both parents are listed in a Netherlands population register.

[43] For 1946, territory defined by Treaty of Versailles. January 1947-April 1949, excluding the commune of Kirrberg.

[44] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954. Coverage for 1947 and 1948 incomplete owing to reorganization of Registrar's Service.

[45] Data for years ended 31 March.

24. Mort-nés (morts foetales tardives) et taux de mortinatalité (suite)

[Voir note explicative à la page 643.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude deaths of infants dying before registration of birth.

[3] Registration not compulsory; believed to be complete for non-indigenous population only, which represents a relatively small proportion of the total.

[4] European, Indian and Coloured, together comprising about one per cent of total population.

[5] Data include stillbirths.

[6] Estimated rate for total population is 24.8 according to recent surveys.

[7] For 1922-24.

[8] Unusually high values are attributable to effect of drought and epidemics.

[9] Bathurst (Colony) only.

[10] Compulsory registration areas, which include about one-tenth of total population.

[11] Reliability of rates affected by movements of population to and from areas where registration is compulsory.

[12] Not computed by the Statistical Office of the United Nations.

[13] For 1931-34.

[14] "Non-Moroccan" population. Rates computed on population excluding personnel in military establishments.

[15] Civil registration system for Moslem population introduced 1 July 1954.

[16] Lagos only.

[17] Estimated rate for indigenous population was 28.8 according to sample census of 1950.

[18] Registration system for African population introduced in 1947.

[19] Estimated rate for indigenous population was 18.1 according to sample census of 1948.

[20] Estimated rate for indigenous population was 19.8 in 1949.

[21] Freetown and the rest of the Colony only.

[22] Former mandated territory (Union of South Africa).

[23] Data exclude deaths of infants dying within 24 hours of birth.

25. Décès 1946–1954 et taux bruts de mortalité 1920–34 et 1946–1954

[Les taux représentent le nombre de décès pour 1 000 habitants. Les données ne comprennent pas les mort-nés. Voir explications page 87.]

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrement irréguliers.

[2] Les données ne comprennent pas les décès de nouveau-nés survenus avant l'enregistrement de leur naissance.

[3] Enregistrement facultatif; considéré comme complet seulement pour la population non indigène représentant une proportion relativement faible de la population totale.

[4] Européens, indiens et métis représentant ensemble 1 pour cent environ de la population totale.

[5] Les données comprennent les mort-nés.

[6] Des enquêtes récentes on permis d'estimer à 24,8 pour 1 000 le taux se rapportant à la population totale.

[7] Pour 1922-24.

[8] Chiffres exceptionnellement élevés attribuables aux conséquences de la sécheresse et aux épidémies.

[9] Bathurst (Colonie) seulement.

[10] Décès signalés dans les régions où l'enregistrement est obligatoire et qui comprennent un dixième environ de la population totale.

[11] La qualité des taux est altérée par des mouvements de population en provenance et en direction des territoires où l'enregistrement est obligatoire.

[12] Ce taux n'a pas été calculé par le Bureau de statistique de l'Organisation des Nations Unies.

[13] Pour 1931-34.

[14] Population "non marocaine". La population à partir de laquelle les taux ont été calculés ne comprend pas les militaires dans les casernes.

[15] Un système d'enregistrement pour la population musulmane est entré en vigueur le 1er juillet 1954.

[16] Lagos seulement.

[17] Le recensement par sondage de 1950 a permis d'estimer à 28,8 pour 1 000 le taux se rapportant à la population indigène.

[18] Un système d'enregistrement pour la population africaine est entré en vigueur en 1947.

[19] Le recensement par sondage de 1948 a permis d'estimer à 18,1 pour 1 000 le taux se rapportant à la population indigène.

[20] Le taux se rapportant à la population indigène a été estimé à 19,8 pour 1 000 en 1949.

[21] Freetown et le reste de la Colonie seulement.

[22] Territoire auparavant sous mandat (Union Sud-Africaine).

[23] Les données ne comprennent pas les décès de nouveau-nés survenus dans les 24 heures.

25. Deaths and crude death rates (continued)

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude deaths of infants dying before registration of birth.

[5] Data include stillbirths.

[7] For 1922-24.

[12] Not computed by the Statistical Office of the United Nations.

[13] For 1931-34.

[23] Data exclude deaths of infants dying within 24 hours of birth.

[24] Registration among Moslem population very incomplete.

[25] For 1932-34.

[26] Civilian population only.

[27] For 1921-24.

[28] Data include deaths of Canadian residents temporarily in the United States; exclude deaths of US residents temporarily in Canada.

[29] For 1926-29.

[30] For 1930-32.

[31] Beginning 1948, Curaçao, Aruba and Bonaire only, and data exclude deaths of infants dying before registration of birth.

[32] For 1933-34.

[33] Excluding tribal Indian population, and also data for Canal Zone shown separately above.

25. Décès et taux bruts de mortalité (suite)

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrement irréguliers.

[2] Les données ne comprennent pas les décès de nouveau-nés survenus avant l'enregistrement de leur naissance.

[5] Les données comprennent les mort-nés.

[7] Pour 1922-24.

[12] Ce taux n'a pas été calculé par le Bureau de statistique de l'Organisation des Nations Unies.

[13] Pour 1931-34.

[23] Les données ne comprennent pas les décès de nouveau-nés survenus dans les 24 heures.

[24] Enregistrement très incomplet pour la population musulmane.

[25] Pour 1932-34.

[26] Population civile seulement.

[27] Pour 1921-24.

[28] Les données comprennent les décès de Canadiens résidant provisoirement aux Etats-Unies; elles ne comprennent pas les décès de résidents américains temporairement au Canada.

[29] Pour 1926-29.

[30] Pour 1930-32.

[31] Depuis 1948, les données se rapportent à Curaçao, Aruba et Bonaire seulement et ne comprennent pas les décès d'enfants nés vivants survenus avant l'enregistrement de leur naissance.

[32] Pour 1933-34.

[33] Non compris les indiens groupés en tribus et, également, la Zone du Canal qui figure séparément ci-dessus.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude deaths of infants dying before registration of birth.

[5] Data include stillbirths.

[7] For 1922-24.

[25] For 1932-34.

[27] For 1921-24.

[34] For death-registration states only; by 1932, these states included 95 per cent of total population.

[35] For 1922-23.

[36] For 1925 and 1927-29.

[37] Compulsory civil registration system introduced in 1940.

[38] Excludes deaths of infants dying within 24 hours of birth.

[39] Beginning 1948, excluding Amerindians, estimated at 18 140 in 1953.

[40] Statistics based on burial permits.

[41] Data exclude deaths in Galápagos Islands and Provinces of Napo Pastaza and Santiago Zamora, but rates are computed on total population.

[42] Excluding Indian jungle population, estimated at 350 000.

[43] Excluding Negro and Indian population of the interior, estimated at 11 200 in 1920, 25 700 in 1947-51 and 26 000 in 1952.

[44] For Paramaribo (capital) only, comprising about 41 per cent of total population.

[45] Excluding Indian jungle population, estimated at 56 700 in 1950.

[46] Colony only.

[47] Prior to 1940, registration area only, comprising 82.5 per cent of total population at 1931 census. Beginning 1947, certain towns only, numbering 60 in 1951 and 1953, and 62 in 1952, and having a population of approximately 1.3 million.

[48] According to test of death registration, 89 per cent complete in 1953.

[49] Beginning 1949, excluding foreigners. Data exclude deaths among tribal aborigines, but rates are computed on population including them.

[50] Rates computed on civilian population.

[51] Prior to 1947, registration area of former British Provinces, comprising approximately 75 per cent of former India, not including Burma. Beginning 1947, registration area of Republic of India, not including French India which became part of India 1 November 1954.

[52] Excludes data for States of Ajmer, Bihar and Madhya Pradesh.

[53] In Java and Madura only.

[54] Prior to 1950, years ended 21 March.

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrement irréguliers.

[2] Les données ne comprennent pas les décès de nouveau-nés survenus avant l'enregistrement de leur naissance.

[5] Les données comprennent les mort-nés.

[7] Pour 1922-24.

[25] Pour 1932-34.

[27] Pour 1921-24.

[34] Etats pratiquant l'enregistrement des décès seulement. En 1932, ces états comprenaient 95 pour cent de la population totale.

[35] Pour 1922-23.

[36] Pour 1925 et 1927-29.

[37] L'enregistrement obligatoire est entré en vigueur en 1940.

[38] Les données ne comprennent pas les décès de nouveau-nés survenus dans les 24 heures.

[39] Depuis 1948, non compris les Amérindiens estimés à 18 140 en 1953.

[40] Statistiques établies d'après les permis d'inhumer.

[41] Les décès ne comprennent pas ceux survenus dans les îles Galápagos et les provinces de Napo Pastaza et Santiago Zamora bien que les taux aient été calculés d'après la population totale.

[42] Non compris la population indienne de la jungle estimée à 350 000 personnes.

[43] Non compris la population nègre et indienne de l'intérieur estimée à 11 200 personnes en 1920, à 25 700 en 1947-51 et à 26 000 en 1952.

[44] Pour Paramaribo seulement qui est la capitale et comprend environ 41 pour cent de la population totale du pays.

[45] Non compris la population indienne de la jungle estimée à 56 700 personnes en 1950.

[46] Colonie seulement.

[47] Avant 1940, territoire d'enregistrement seulement, comprenant 82,5 pour cent de la population totale au recensement de 1931. Depuis 1947, quelques villes seulement s'élevant à 60 en 1951 et 1953, à 62 en 1952, avec une population de 1 300 000 habitants environ.

[48] Une évaluation du système a permis de conclure que l'enregistrement des décès était complet dans une proportion de 89 pour cent en 1953.

[49] A partir de 1949, non compris les étrangers. Les données ne comprennent pas les décès parmi les tribus aborigènes, mais les taux ont été calculés d'après un chiffre de population les englobant.

[50] Taux calculés d'après la population civile.

[51] Avant 1947, territoire d'enregistrement des anciennes provinces britanniques, représentant approximativement 75 pour cent de l'Inde avant le partage, non compris la Birmanie. Depuis 1947, territoire d'enregistrement de la république de l'Inde, non compris l'Inde française qui fait partie de l'Inde depuis le 1er novembre 1954.

[52] Non compris les Etats d'Ajmer, de Bihar et de Madhya Pradesh.

[53] Java et Madoura seulement.

[54] Avant 1950, années terminées le 21 mars.

25. Deaths and crude death rates (continued)

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude deaths of infants dying before registration of birth.

[3] Registration not compulsory; believed to be complete for non-indigenous population only, which represents a relatively small proportion of the total.

[5] Data include stillbirths.

[7] For 1922-24.

[12] Not computed by the Statistical Office of the United Nations.

[25] For 1932-34.

[27] For 1921-24.

[29] For 1926-29.

[50] Rates computed on civilian population.

[55] Excluding Bedouin population in the Negev.

[56] Prior to 1948, Jewish population of Palestine.

[57] Excludes war casualties.

[58] Japanese nationals in Japan only. Prior to 1953, excluding Amami Islands, acquired from Ryukyu Islands between 1951 and 1953.

[59] Registration estimated to be 90 per cent complete.

[60] For East Jordan only.

[61] Lebanese nationals only.

[62] Includes data for Singapore.

[63] Registration area only, comprising about 90 per cent of total population.

[64] Settled Moslem population of territory formerly under British Mandate. For deaths and death rates among Jewish population, see Israel above.

[65] Present territory, i.e., excluding Amami Islands, which reverted to Japan between 1951 and 1953.

[66] Includes data for Amami Islands.

[67] Registration has improved under Registration Ordinance, operative since 1949, and is now believed to be 80 per cent complete.

[68] For Singapore Island only.

[69] Excluding nomad and semi-nomad population, estimated at 288 400 in 1945.

[70] Excludes data for Southern Dobruja.

[71] Prior to 1948, excluding territory ceded by Hungary in 1947.

[72] Excludes data for civilian aliens living in Denmark without residence permits, numbering about 200 000 in 1945 and about 2 500 at the end of 1948.

[73] Prior to 1951, Finnish nationals in Finland only.

[74] Territory of 1937.

[75] Beginning 1951, West Berlin only.

[76] Prior to 1948, excluding Dodecanese.

[77] For 1928-29.

[78] Prior to 1948, including territory ceded to Czechoslovakia in 1947.

25. Décès et taux bruts de mortalité (suite)

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrement irréguliers.

[2] Les données ne comprennent pas les décès de nouveau-nés survenus avant l'enregistrement de leur naissance.

[3] Enregistrement facultatif; considéré comme complet seulement pour la population non indigène représentant une proportion relativement faible de la population totale.

[5] Les données comprennent les mort-nés.

[7] Pour 1922-24.

[12] Ce taux n'a pas été calculé par le Bureau de statistique de l'Organisation des Nations Unies.

[25] Pour 1932-34.

[27] Pour 1921-24.

[29] Pour 1926-29.

[50] Taux calculés d'après la population civile.

[55] Non compris les bédouins du Negev.

[56] Avant 1948, population juive de Palestine.

[57] Non compris les pertes de guerre.

[58] Nationaux japonais au Japon seulement. Avant 1953, non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953.

[59] Enregistrement considéré comme complet dans la proportion de 90 pour cent.

[60] Jordanie de l'Est seulement.

[61] Nationaux libanais seulement.

[62] Y compris Singapour.

[63] Territoire d'enregistrement seulement, comprenant environ 90 pour cent de la population totale.

[64] Population musulmane du territoire auparavant sous mandat britannique, à l'exclusion des nomades. Pour les décès et taux de mortalité parmi la population juive, voir Israël ci-dessus.

[65] Territoire actuel, c'est-à-dire, non compris les îles Amami rendues au Japon entre 1951 et 1953.

[66] Y compris les îles Amami.

[67] L'enregistrement s'est amélioré depuis l'entrée en vigueur de l'Ordonnance d'Enregistrement en 1949 et est à présent considéré comme complet dans une proportion de 80 pour cent.

[68] Pour l'île de Singapour seulement.

[69] Non compris les nomades et semi-nomades estimés à 288 400 en 1945.

[70] Non compris la Dobroudja méridionale.

[71] Avant 1948, non compris le territoire cédé par la Hongrie en 1947.

[72] Non compris les décès parmi les civils étrangers vivant au Danemark sans permis de séjour, environ 200 000 en 1945 et 2 500 fin 1948.

[73] Avant 1951, nationaux finlandais en Finlande seulement.

[74] Territoire de 1937.

[75] Depuis 1951, Berlin-Ouest seulement.

[76] Avant 1948, non compris le Dodécanèse.

[77] Pour 1928-29.

[78] Avant 1948, y compris le territoire cédé à la Tchécoslovaquie en 1947.

25. Deaths and crude death rates (continued)

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[7] For 1922-24.

[12] Not computed by the Statistical Office of the United Nations.

[13] For 1931-34.

[23] Data exclude deaths of infants dying within 24 hours of birth.

[27] For 1921-24.

[32] For 1933-34.

[74] Territory of 1937.

[79] 1921-1934: territory of 1938. Beginning 1946, present territory including that part of the former Free Territory of Trieste incorporated in October 1954.

[80] Rates computed on population excluding non-Maltese armed forces stationed in the area.

[81] Prior to 1949, excluding villages of Elten and Tüddern. Data include deaths of persons outside country if listed in a Netherlands population register.

[82] Data include deaths of Norwegian residents temporarily abroad.

[83] Data less reliable before 1950.

[84] Includes data for Southern Dobruja, Bessarabia and Northern Bucovina.

[85] Prior to 1947, territory defined by Treaty of Versailles. January 1947-April 1949, excluding the commune of Kirrberg.

[86] Data exclude deaths among armed forces outside country. 1946-1947: data are for civilian population. 1948-1949: rates computed on population including armed forces outside country and merchant seamen at sea. 1950: rates computed on population including merchant seamen at sea.

[87] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954. Prior to 1947, excluding also territory ceded by Italy in 1947.

[88] Coverage for 1947 and 1948 incomplete owing to reorganization of Registrar's Service.

[89] Excluding full-blooded aborigines, estimated at 47 000 in 1944. Including armed forces outside country.

[90] Data for years ended 31 March.

[91] Prior to 1949, data include stillbirths.

[92] Rates computed on population excluding military and administrative personnel and their dependents.

[93] Prior to 1953, data by year of registration.

[94] 1950-1952, and 1954: excluding Rota; 1954, also excluding outlying islands of Yap district.

[95] Data for years ended 30 June.

[96] For Tongan population only.

[97] Data include stillbirths among Samoan population. 1946-1950: data for years ended 31 March.

[98] For Samoan population only.

[99] For 1923-24.

25. Décès et taux bruts de mortalité (suite)

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrement irréguliers.

[7] Pour 1922-24.

[12] Ce taux n'a pas été calculé par le Bureau de statistique de l'Organisation des Nations Unies.

[13] Pour 1931-34.

[23] Les données ne comprennent pas les décès de nouveau-nés survenus dans les 24 heures.

[27] Pour 1921-24. [32] Pour 1933-34. [74] Territoire de 1937.

[79] 1921-1934: territoire de 1938. Depuis 1946, territoire actuel, y compris la partie de l'ancien territoire libre de Trieste attribuée à l'Italie en octobre 1954.

[80] Taux calculés d'après un chiffre de population ne comprenant les militaires non maltais en garnison dans la région.

[81] Avant 1949, non compris les villages d'Elten et Tüddern. Les données comprennent les décès survenus à l'étranger si le défunt figurait sur un registre d'état-civil néerlandais.

[82] Les données comprennent les décès de Norvégiens résidant temporairement à l'étranger.

[83] Données moins complètes avant 1950.

[84] Y compris la Dobroudja méridionale, la Bessarabie et la Bukovine du Nord.

[85] Avant 1947, territoire du traité de Versailles; janvier 1947-avril 1949, non compris la commune de Kirrberg.

[86] Non compris les décès parmi les forces armées hors du pays. 1946-1947: population civile. 1948-49: taux calculés d'après un chiffre de population comprenant les forces armées hors du pays et les équipages de la marine marchande en mer. 1950: taux calculés d'après un chiffre de population comprenant les équipages de la marine marchande en mer.

[87] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954. Avant 1947, non compris également le territoire cédé par l'Italie en 1947.

[88] Données incomplètes pour 1947 et 1948 à la suite de la réorganisation, après guerre, des services de l'état civil.

[89] Non compris les purs aborigènes, estimés à 47 000 en 1944. Y compris les forces armées hors du pays.

[90] Données pour années terminées le 31 mars.

[91] Avant 1949, les taux comprennent les mort-nés.

[92] Taux calculés d'après un chiffre de population ne comprenant pas les militaires et les fonctionnaires ainsi que les membres de leur famille les accompagnant.

[93] Avant 1953, les données se rapportent à l'année de l'enregistrement.

[94] 1950-1952 et 1954: non compris Rota; 1954, non compris également les îles périphériques du district de Yap.

[95] Données pour années terminées le 30 juin.

[96] Pour la population de Tonga seulement.

[97] Les taux comprennent les mort-nés parmi les Samoans. 1946-1950: données pour années terminées le 31 mars.

[98] Samoans exclusivement.

[99] Pour 1923-24.

26. Deaths by age and sex : latest available data

[Data exclude stillbirths. For evaluation of quality of data, see code on Table 25 and discussion, p. 38.]

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[9] L'origine de la disparité entre ce chiffre et la donnée correspondante du tableau 25 n'a pu être déterminée.

[20] Y compris les décès de personnes de sexe inconnu.

[22] Colonie seulement.

[23] Territoire d'enregistrement seulement, comprenant 82,5 pour cent de la population totale au recensement de 1931.

[24] Non compris les tribus aborigènes et les étrangers.

[25] Territoire d'enregistrement, comprenant environ 77 pour cent de la population de l'Inde à l'exclusion de l'Inde Française qui fait partie de la République depuis le 1er novembre 1954.

[26] Les données ne comprennent pas les décès parmi les bédouins du Negev.

26. Deaths by age and sex (continued)

† Data known to be by year of registration rather than by year of occurrence.

[27] Japanese nationals in present territory, i.e., including Amami Islands, acquired from Ryukyu Islands 25 December 1953.

[28] Settled Moslem population of territory formerly under British Mandate. For deaths among Jewish population, see Israel above.

[29] Data exclude reported deaths for which copy of certificate not received in central office.

[30] Including Amami Islands, which reverted to Japan 25 December 1953.

[31] For year ended 30 June.

[32] Excluding Christmas and Cocos-Keeling Islands.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[27] Ressortissants japonais sur le territoire actuel du Japon, c'est-à-dire, y compris les îles Amami détachées des îles Ryû-Kyû le 25 décembre 1953.

[28] Population musulmane du territoire auparavant sous mandat britannique, à l'exclusion des nomades. Pour les décès parmi la population juive, voir Israël ci-dessus.

[29] Les données ne comprennent pas les décès pour lesquels la copie de l'acte de décès n'est pas parvenue au bureau central de statistique.

[30] Y compris les îles Amami rendues au Japon le 25 décembre 1953.

[31] Pour une année terminée le 30 juin.

[32] Non compris les îles Christmas et Cocos-Keeling.

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[12] Reason for discrepancy between this and corresponding figure in Table 28 not ascertained.

[35] Territory of 1937.

[39] Data include deaths of persons outside country if listed in a Netherlands population register.

[40] Data include deaths of Norwegian residents temporarily abroad.

[41] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954.

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[12] L'origine de la disparité entre ce chiffre et la donnée correspondante du tableau 28 n'a pu être déterminée.

[35] Territoire de 1937.

[39] Les données comprennent les décès survenus à l'étranger si le défunt figurait sur un registre de population néerlandais.

[40] Les données comprennent les décès de Norvégiens résidant temporairement à l'étranger.

[41] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954.

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude live-born infants dying before registration of birth.

[3] For 1922-24.

[4] European, Indian and Coloured, together comprising about one per cent of total population.

[5] Infant deaths include stillbirths, but rates are computed on live births.

[6] Bathurst (Colony) only.

[7] Compulsory registration areas, which include about one-tenth of total population.

[8] Reliability of data affected by movements of population to and from areas where registration is compulsory.

[9] Not computed by the Statistical Office of the United Nations.

[10] For 1931-34.

[11] "Non-Moroccan" population.

[12] Civil registration system for Moslem population introduced 1 July 1954.

[13] Registration not compulsory; believed to be complete for non-indigenous population, which represents a relatively small proportion of the total.

[14] Lagos only.

[15] Freetown and the rest of the Colony only.

[16] Former mandated territory (Union of South Africa).

[17] Registration among Moslem population very incomplete.

28. Décès d'enfants de moins d'un an, 1946 – 1954 et taux de mortalité infantile, 1920 – 34 et 1946 – 1954

[Les taux représentent le nombre de décès d'enfants âgés de moins d'un an pour 1 000 naissances vivantes. Les données ne comprennent pas les mort-nés. Voir explications à la page 90.]

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[2] Les données ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[3] Pour 1922-24.

[4] Européens, indiens et métis représentant ensemble 1 pour cent environ de la population totale.

[5] Les décès d'enfants de moins d'un an comprennent les mort-nés, mais les taux ont été calculés d'après les naissances vivantes.

[6] Bathurst (Colonie) seulement.

[7] Naissances signalées dans les régions où l'enregistrement est obligatoire et qui comprennent un dixième environ de la population totale.

[8] La qualité des taux est altérée par des mouvements de population en provenance et en direction des territoires où l'enregistrement est obligatoire.

[9] Ce taux n'a pas été calculé par le Bureau de Statistique de l'Organisation des Nations Unies.

[10] Pour 1931-34.

[11] Population "non marocaine".

[12] Un système d'enregistrement pour la population musulmane est entré en vigueur le 1er juillet 1954.

[13] Enregistrement facultatif; considéré comme complet seulement pour la population non indigène représentant une proportion relativement faible de la population totale.

[14] Lagos seulement.

[15] Freetown et le reste de la Colonie seulement.

[16] Territoire auparavant sous mandat (Union Sud-Africaine).

[17] Enregistrement très incomplet pour la population musulmane.

28. Infant deaths and infant mortality rates (continued)

[See headnote on page 698.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude live-born infants dying before registration of birth.

[3] For 1922-24.

[18] Computed on live births among civilian population only.

[19] For 1932-34.

[20] Data include events among Canadian residents temporarily in the United States; exclude events among US residents temporarily in Canada.

[21] Beginning 1948, rates computed on live births registered in year of occurrence.

[22] Data exclude live-born infants dying within 24 hours of birth.

[23] Rates computed on live births tabulated by date of occurrence.

[24] For 1920-23.

[25] Data include stillbirths.

[26] Rates computed on births which have been adjusted for underregistration as follows: 1930-1935, 3 per cent; 1946-1949, 2 per cent; 1950, 1.5 per cent.

[27] For 1926-29.

[28] For 1933-34.

[29] For 1927-29.

[30] For 1921-24.

[31] For 1925-27, 1929.

[32] For 1930-32.

[33] For Curaçao, Aruba and Bonaire only and excludes live-born infants dying before registration of birth.

[34] Excluding tribal Indian population, and also data for Canal Zone shown separately above.

[35] Beginning 1951, rates computed on births estimated from a 50 per cent sample.

[36] For birth-registration states only; by 1932, these states included 95 per cent of the total population.

28. Décès d'enfants de moins d'un an et taux de mortalité infantile (suite)

[Voir note explicative à la page 699.]

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[2] Les données ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[3] Pour 1922-24.

[18] Taux calculés d'après les naissances vivantes parmi la population civile seulement.

[19] Pour 1932-34.

[20] Les données comprennent les décès d'enfants de moins d'un an et naissances parmi les Canadiens résidant provisoirement aux Etats-Unis; elles ne comprennent pas ceux survenus parmi les résidents américains temporairement au Canada.

[21] Depuis 1948, les taux sont calculés d'après des données (naissances vivantes) enregistrées l'année même de la naissance.

[22] Les données ne comprennent pas les enfants nés vivants décédés dans les 24 heures.

[23] Les taux sont calculés d'après des données (naissances vivantes) qui se rapportent à la date de la naissance.

[24] Pour 1920-23.

[25] Les données comprennent les mort-nés.

[26] Taux calculés sur des données (naissances vivantes) ajustées dans la proportion suivante pour compenser les lacunes de l'enregistrement: 1930-1935, 3 pour cent; 1946-1949, 2 pour cent; 1950, 1,5 pour cent.

[27] Pour 1926-29.

[28] Pour 1933-34.

[29] Pour 1927-29.

[30] Pour 1921-24.

[31] Pour 1925-27, 1929.

[32] Pour 1930-32.

[33] Pour Curaçao, Aruba et Bonaire seulement. Les données ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[34] Non compris les indiens groupés en tribus ainsi que la Zone du Canal qui figure séparément ci-dessus.

[35] Depuis 1951 les taux sont calculés d'après les naissances estimées sur la base d'un sondage à 50 pour cent.

[36] Etats pratiquant l'enregistrement des naissances, seulement. En 1932, ces états comprenaient 95 pour cent de la population totale.

28. Infant deaths and infant mortality rates (continued)

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Data exclude live-born infants dying before registration of birth.

[3] For 1922-24.

[10] For 1931-34.

[19] For 1932-34.

[22] Data exclude live-born infants dying within 24 hours of birth.

[30] For 1921-24.

[37] Rates computed on live births excluding infants dying before registration of birth.

[38] Compulsory civil registration system introduced in 1940.

[39] Beginning 1948, excluding Amerindians, estimated at 18 140 in 1953.

[40] Rates computed on live births which have been adjusted for under-registration. For details see Table 19.

[41] Statistics based on burial permits; rates computed on number of baptisms recorded in church registers.

[42] Excluding Galápagos Islands and Provinces of Napo Pastaza and Santiago Zamora.

[43] Excluding Indian jungle population, estimated at 350 000.

[44] Excluding Negro and Indian population of the interior, estimated at 11 200 in 1920, 25 700 in 1946-1951 and 26 000 in 1952.

[45] For Paramaribo (capital) only, comprising about 41 per cent of total population.

[46] Excluding Indian jungle population, estimated at 56 700 in 1950.

[47] Colony only.

[48] Prior to 1940, registration area only, comprising 82.5 per cent of total population at 1931 census. Beginning 1947, certain towns only, numbering 60 in 1951 and 1953 and 62 in 1952, and having a population of approximately 1.3 million.

[49] Excluding tribal aborigines. Beginning 1949, also excluding foreigners.

[50] Prior to 1947, registration area of former British Provinces, comprising approximately 75 per cent of former India, not including Burma. Beginning 1947, registration area of Republic of India, not including French India which became a part of India 1 November 1954.

[51] Excludes data for States of Ajmer, Bihar, and Madhya Pradesh.

[52] Includes data for Netherlands New Guinea.

[53] Excluding Bedouin population in the Negev.

[54] Prior to 1948, Jewish population of Palestine.

[55] Japanese nationals in Japan only. Prior to 1953 excluding Amami Islands acquired from Ryukyu Islands between 1951 and 1953.

[56] Registration area only, comprising about 90 per cent of total population.

28. Décès d'enfants de moins d'un an et taux de mortalité infantile (suite)

[Voir note explicative à la page 699.]

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[2] Les données ne comprennent pas les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[3] Pour 1922-24.

[10] Pour 1931-34.

[19] Pour 1932-34.

[22] Les données ne comprennent pas les enfants nés vivants décédés dans les 24 heures.

[30] Pour 1921-24.

[37] Taux calculés d'après des données (naissances vivantes) ne comprenant pas les enfants décédés avant l'enregistrement de leur naissance.

[38] L'enregistrement obligatoire est entré en vigueur en 1940.

[39] Depuis 1948, non compris les Amérindiens estimés à 18 140 en 1953.

[40] Taux calculés d'après des données (naissances vivantes) ajustées pour compenser les lacunes de l'enregistrement. Voir précisions complémentaires au tableau 19.

[41] Statistiques établies d'après les permis d'inhumer. Les taux ont été calculés à partir des baptêmes inscrits sur les registres de l'église.

[42] Non compris les îles Galápagos et les provinces de Napo Pastaza et Santiago Zamora.

[43] Non compris la population indienne de la jungle estimée à 350 000 personnes.

[44] Non compris la population nègre et indienne de l'intérieur estimée à 11 200 en 1920, 25 700 en 1946-51 et 26 000 en 1952.

[45] Pour Paramaribo seulement qui est la capitale et comprend environ 41 pour cent de la population totale du pays.

[46] Non compris la population indienne de la jungle estimée à 56 700 personnes en 1950.

[47] Colonie seulement.

[48] Avant 1940, territoire d'enregistrement seulement, comprenant 82,5 pour cent de la population totale au recensement de 1931. Depuis 1947, quelques villes seulement s'élevant à 60 en 1951 et 1953, à 62 en 1952, avec une population de 1 300 000 habitants environ.

[49] Non compris les tribus aborigènes. Depuis 1949, non compris également les étrangers.

[50] Avant 1947, territoire d'enregistrement des anciennes provinces britanniques, représentant approximativement 75 pour cent de l'Inde avant le partage, non compris la Birmanie. Depuis 1947, territoire d'enregistrement de la république de l'Inde, non compris l'Inde française qui fait partie de l'Indie depuis le 1er novembre 1954.

[51] Non compris les Etats d'Ajmer, de Bihar et de Madhya Pradesh.

[52] Y compris la Nouvelle-Guinée néerlandaise.

[53] Non compris les bédouins du Negev.

[54] Avant 1948, population juive de la Palestine.

[55] Nationaux japonais au Japon seulement. Avant 1953, non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953.

[56] Territoire d'enregistrement seulement, comprenant environ 90 pour cent de la population totale.

28. Infant deaths and infant mortality rates (continued)

[See headnote on page 698.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[3] For 1922-24.

[9] Not computed by the Statistical Office of the United Nations.

[13] Registration not compulsory; believed to be complete for non-indigenous population, which represents a relatively small proportion of the total.

[19] For 1932-34.

[22] Data exclude live-born infants dying within 24 hours of birth.

[30] For 1921-24.

[37] Rates computed on live births excluding infants dying before registration of birth.

[57] Settled Moslem population of territory formerly under British Mandate. For infant deaths and rates among Jewish population, see Israel above.

[58] Registration has improved under Registration Ordinance, operative since 1949.

[59] Prior to 1951, Singapore Island only.

[60] Excluding nomad and semi-nomad population, estimated at 288 400 in 1945.

[61] For 1928-29.

[62] Excludes data for Southern Dobruja.

[63] 1920-24: excluding Jersey, Alderney and Sark. 1925-1947: excluding Jersey.

[64] Prior to 1948, excluding territory ceded by Hungary in 1947.

[65] Excludes data for civilian aliens living in Denmark without residence permits, numbering about 200 000 in 1945 and about 2 500 at the end of 1948.

[66] Prior to 1951. Finnish nationals in Finland only.

[67] Territory of 1937.

[68] Beginning 1951, West Berlin only.

[69] Excluding Dodecanese.

[71] Rates computed on live births registered within one year of occurrence.

[72] 1922-1934: territory of 1938. Beginning 1946, present territory, including that part of the former Free Territory of Trieste incorporated in October 1954.

[73] Prior to 1949, excluding villages of Elten and Tüddern. Data include births and deaths of infants outside country if listed in a Netherlands population register.

[74] Data include deaths of Norwegian residents temporarily abroad.

[75] Data less reliable before 1950.

[76] Includes data for Southern Dobruja, Bessarabia and Northern Bucovina.

[77] Prior to 1947, territory defined by Treaty of Versailles. January 1947-April 1949, excluding the commune of Kirrberg.

28. Décès d'enfants de moins d'un an et taux de mortalité infantile (suite)

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[3] Pour 1922-24.

[9] Ce taux n'a pas été calculé par le Bureau de Statistique de l'Organisation des Nations Unies.

[13] Enregistrement facultatif; considéré comme complet seulement pour la population non indigène représentant une proportion relativement faible de la population totale.

[19] Pour 1932-34.

[22] Les données ne comprennent pas les enfants nés vivants décédés dans les 24 heures.

[30] Pour 1921-24.

[37] Taux calculés d'après des données (naissances vivantes) ne comprenant pas les enfants décédés avant l'enregistrement de leur naissance.

[57] Population musulmane du territoire auparavant sous mandat britannique, à l'exclusion des nomades. Pour les décès d'enfants de moins d'un an et les taux de mortalité infantile parmi la population juive, voir Israël ci-dessus.

[58] L'enregistrement s'est amélioré depuis l'entrée en vigueur de l'Ordonnance d'Enregistrement en 1949.

[59] Avant 1951, l'île de Singapour exclusivement.

[60] Non compris les nomades et semi-nomades estimés à 288 400 en 1945.

[61] Pour 1928-29.

[62] Non compris la Dobroudja méridionale.

[63] 1920-24: Non compris Jersey, Alderney et Sercq. 1925-1947: Non compris Jersey.

[64] Avant 1948, non compris le territoire cédé par la Hongrie en 1947.

[65] Non compris les données pour les civils étrangers vivant au Danemark sans permis de séjour, environ 200 000 en 1945 et 2 500 fin 1948.

[66] Avant 1951, nationaux finlandais en Finlande seulement.

[67] Territoire de 1937.

[68] Depuis 1951, Berlin-Ouest seulement.

[69] Non compris le Dodécanèse.

[70] Avant 1948, y compris le territoire cédé à la Tchécoslovaquie en 1947.

[71] Taux calculés d'après les naissances vivantes enregistrées dans un délai d'un an.

[72] 1922-1934: Territoire de 1938. Depuis 1946, territoire actuel, y compris la partie de l'ancien territoire de Trieste attribuée à l'Italie en octobre 1954.

[73] Avant 1949, non compris les villages d'Elten et Tüddern. Les données comprennent les naissances et les décès d'enfants de moins d'un an survenus à l'étranger si l'un des parents au moins est porté sur un registre d'état civil néerlandais.

[74] Les données comprennent les décès d'enfants de moins d'un an parmi les Norvégiens résidant temporairement à l'étranger.

[75] Données moins complètes avant 1950.

[76] Y compris la Dobroudja du Sud, la Bessarabie et la Bukovine du Nord.

[77] Avant 1947, territoire du Traité de Versailles; Janvier 1947-avril 1949, non compris la commune de Kirrberg.

28. Infant deaths and infant mortality rates (continued)

[See headnote on page 698.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[25] Data include stillbirths.

[35] Beginning 1951, rates computed on births estimated from a 50 per cent sample.

[78] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954. Prior to 1947, excluding also territory ceded by Italy in 1947.

[79] Excluding full-blooded aborigines, estimated at 47 000 in 1944.

[80] Data for years ended 31 March.

[81] For 1930-33.

[82] Prior to 1949, data include stillbirths.

[83] Excludes data for Rota and the outer islands of the Yap district.

[84] For year ended 30 June.

[85] For Tongan population only.

[86] Samoan population.

28. Décès d'enfants de moins d'un an et taux de mortalité infantile (suite)

[Voir note explicative à la page 699.]

¶ Data classified according to 1948 Revision may be found in Part B, commençant à la page 710. * Provisoire.

† Data known to be by year of registration rather than by year of occurrence. [1] Estimate, based on 90 per cent of the registered deaths.

[2] Data exclude reported deaths for which copy of certificate not received in central office. [3] Registration not compulsory; believed to be complete for non-indigenous population only, which represents a relatively small proportion of the total. [4] Present territory, i.e., excluding Amami Islands, which reverted to Japan between 1951 and 1953.

[5] Data exclude deaths of infants dying within 24 hours of birth, numbering 3 411. [6] Reason for discrepancy between this and corresponding figures shown elsewhere not ascertained. [7] Included with Diseases of skin, cellular tissue, bones and organs of movement, Abridged List No. 37. [8] Excludes cardiovascular diseases diagnosed as sudden syncopic cardiac diseases and included in List No. 44.

[9] Includes Chronic rheumatism and gout (59, 60), Abridged List No. 17.

[10] Includes cardiovascular diseases diagnosed as sudden syncopic cardiac diseases.

29. Décès selon la cause, nombres et taux : dernières données disponibles

Partie A: Décès classés selon la Nomenclature internationale abrégée de la révision de 1938 ¶

[Les décès ne comprennent pas les morts-nés. Les taux représentent le nombre de décès de chaque cause pour 100 000 habitants. Pour une évaluation de la qualité des données voir code du tableau 25 et explications à la page 90.]

¶ Des données classées selon la révision de 1948 se trouvent à la partie B, beginning on page 710. * Provisional.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès. [1] Estimation reposant sur 90 pour cent des décès enregistrés. [2] Les données ne comprennent pas les décès signalés pour lesquels la copie du certificat de décès n'est pas parvenue au bureau central de statistique. [3] Enregistrement facultatif, considéré comme complet seulement pour la population non indigène representant une proportion relativement faible de la population totale. [4] Territoire actuel, c'est-à-dire, non compris les îles Amami rendues au Japon entre 1951 et 1953. [5] Les données ne comprennent pas les décès de nouveau—nés survenus dans les 24 heures, s'élevant à 3 411. [6] L'origine de la disparité entre cette donnée et les chiffres correspondants publiées ailleurs n'a pu être déterminée.

[7] Compris dans "Maladies de la peau, du tissu cellulaire, des os et des organes du mouvement", Rubrique No. 37 de la Nomenclature abrégée.

[8] Non compris les affections cardiovasculaires, définies comme syncopes cardiaques et comprises dans la Rubrique No. 44. [9] Y compris le "Rhumatisme chronique et la goutte" (59, 60), Rubrique No. 17.

[10] Y compris les affections cardiovasculaires, définies comme syncopes cardiaques.

29. Deaths and death rates by cause (continued)

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

¶¶ Des données classées selon la révision de 1938 se trouvent à la partie A, commençant à la page 708.

[6] L'origine de la disparité entre cette donnée et les chiffres correspondants publiées ailleurs n'a pu être déterminée.

[13] Population civile seulement.

[14] Non compris le Yukon et les Territoires du Nord-Ouest. Les données comprennent les décès de Canadiens résidant provisoirement aux Etats-Unis; ils ne comprennent pas les décès de résidents américains temporairement au Canada.

29. Deaths and death rates by cause (continued)

Part B: Classified according to Abbreviated List, 1948 Revision (continued) ¶¶

[See headnote on page 708.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

¶¶ Data classified according to 1938 Revision may be found in Part A, beginning on page 708.

[17] Data are classified by alternative classification BN47, BN38, BN49 and BN50.

[18] Excluding tribal aborigines and foreigners.

[19] Computed on civilian population.

[20] Included with Abbreviated List No. BE48.

[21] Includes: 1) all other diseases classified as injuries and due to parasites 3 110
2) all other injuries 2 022
3) fractures, head injuries and internal injuries 254
4) burns 137
5) effects of poisons 79

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

¶¶ Des données classées selon la révision de 1938 se trouvent à la partie A, commençant à la page 708.

[17] Données classées suivant la classification alternative BN47, BN48, BN49 et BN50.

[18] Non compris les aborigènes groupés en tribus et les étrangers.

[19] Calculé d'après la population civile.

[20] Compris dans la rubrique No. BE48 de la Liste abrégée.

[21] Y compris:
1) Toutes autres affections classées comme blessures et dues à des parasites 3 110
2) Toutes autres blessures 2 022
3) Fractures, fractures de la boite cranienne et traumatismes internes 254
4) Brûlures 137
5) Empoisonnements 79

29. Deaths and death rates by cause (continued)

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

¶¶ Des données classées selon la révision de 1938 se trouvent à la partie A, commençant à la page 708.

[22] Ressortissants japonais sur le territoire actuel, c'est-à-dire, y compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953.

[23] Ile de Singapour seulement.

[24] Ile de Guernesey seulement.

[25] Y compris les décès d'enfants nés vivant mais décédés avant l'enregistrement de leur naissance.

DEATHS

29. Deaths and death rates by cause (continued)

Part B: Classified according to Abbreviated List, 1948 Revision (continued) ¶¶

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

¶¶ Data classified according to 1938 Revision may be found in Part A, beginning on page 708.

[19] Computed on civilian population.

[26] Data exclude deaths of infants dying before registration of birth.

[27] Present territory, including that part of the former Free Territory of Trieste incorporated in October 1954.

29. Décès selon la cause, nombres et taux (suite)

† Data known to be by year of registration rather than by year of occurrence.

¶¶ Data classified according to 1938 Revision may be found in Part A, beginning on page 708.

[28] Data include deaths of persons outside country if listed in a Netherlands population register.

[29] Data include deaths of Norwegian residents temporarily abroad.

[30] Computed on population excluding non-Maltese armed forces stationed in the area.

29. Décès selon la cause, nombres et taux (suite)

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

¶¶ Des données classées selon la révision de 1938 se trouvent à la partie A, commençant à la page 708.

[28] Les données comprennent les décès survenus à l'étranger si le défunt figurait sur un registre de population néerlandais.

[29] Les données comprennent les décès de Norvégiens résidant temporairement à l'étranger.

[30] Calculé sur un chiffre de population ne comprenant pas les militaires non maltais en garnison dans la région.

† Data known to be by year of registration rather than by year of occurrence.

¶¶ Data classified according to 1938 Revision may be found in Part A, beginning on page 708.

[31] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954.

[32] Data are for tabulation area only, which includes approximately 22 per cent of the total population.

[33] Excluding full-blooded aborigines, estimated at 47 000 in 1944. Including armed forces outside country.

29. Décès selon la cause, nombres et taux (suite)

Partie B: Décès classés selon la Nomenclature abrégée de la révision de 1948 (suite) ¶¶

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du décès.

¶¶ Des données classées selon la révision de 1938 se trouvent à la partie A, commençant à la page 708.

[31] Non compris Koper et Buje qui constituent la partie de l'ancien Territoire Libre de Trieste attribuée à la Yougoslavie en octobre 1954.

[32] Données pour la zone d'exploitation seulement qui comprend environ 22 pour cent de la population totale.

[33] Non compris les purs aborigènes estimés à 47 000 en 1944. Y compris les forces armées hors du pays.

30. Marriages, 1946–1954, and crude marriage rates, 1920–34 and 1946–1947

[Rates are the number of civil or religious marriages per 1000 population. For discussion, see page 40.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[2] Increases reflect the effect of social security programme introduced after World War II participation in which required civil registration of marriages.

[3] Prior to 1947, data are marriages recorded in church registers.

[4] Registration not compulsory; believed to be complete for non-indigenous population only, which represents a relatively small proportion of the total.

[5] European, Indian and Coloured, together comprising about one per cent of total population.

[6] For 1922-24.

[7] Data are civil marriages only.

[8] For 1931-34.

[9] "Non-Moroccan" population.

[10] Former mandated territory (Union of South Africa).

[11] Including Moroccan Jewish population.

[12] Registration compulsory for French population only.

[13] Data exclude marriages in which one partner only is European.

[14] Data are Christian and Moslem marriages.

30. Mariages, 1946–1954, et taux bruts de nuptialité, 1920–34 et 1946–1954

[Les taux représentent le nombre de mariages civils ou religieux pour 1 000 habitants. Voir explications à la page 91.]

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du mariage.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[2] Augmentations provenant de la mise en vigueur d'un programme de sécurité sociale après la Deuxième Guerre mondiale et qui s'expliquent par le fait que pour bénéficier des allocations familiales les musulmans doivent faire enregistrer leur mariage à l'état civil.

[3] Avant 1947, les données se rapportent aux mariages inscrits sur les registres de l'église.

[4] L'enregistrement des mariages est facultatif; il n'est considéré comme complet que pour la population non indigène représentant une proportion relativement faible de la population totale.

[5] Européens, Indiens et métis, représentant ensemble environ 1 pour cent de la population totale.

[6] Pour 1922-24.

[7] Données relatives aux mariages civils seulement.

[8] Pour 1931-34.

[9] Population "non marocaine".

[10] Territoire auparavant sous mandat (Union Sud-Africaine).

[11] Y compris les marocains israélites.

[12] L'enregistrement n'est obligatoire que pour les français.

[13] Non compris les mariages dans lesquels un seul des conjoints est européen.

[14] Les données se rapportent aux mariages chrétiens et musulmans.

30. Marriages and crude marriage rates (continued)

[See headnote on page 726.]

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[6] For 1922-24.

[7] Data are civil marriages only.

[15] Rates computed on civilian population.

[16] For 1927-29.

[17] For 1921-24.

[18] Statistics based on marriage licenses issued.

[19] Coverage improved in recent years.

[20] Includes large number of consensual unions formalized in response to special legislation.

[21] 1927-1934: years ended 31 July. 1946-1950: years ended 30 June.

[22] For 1930-31, 1933-34.

[23] For 1925-27.

[24] For 1932, 1934.

[25] Data are civil marriages only. Religious marriages not permitted without proof that civil marriage has been performed.

[26] For Curaçao, Aruba and Bonaire only.

[27] For Curaçao only.

[28] For 1933-34.

[29] Excluding tribal Indian population, and also data for Canal Zone shown separately above.

[30] Data are estimates based on number of marriages performed for some areas, and on number of licences issued or similar information for other areas.

[31] Data for year ended 30 June.

[32] Not computed by the Statistical Office of the United Nations.

[33] Compulsory civil registration system introduced in 1940.

[34] Beginning 1948, excluding Amerindians, estimated at 18 140 in 1953.

[35] Data are marriages recorded in church registers.

[36] Data exclude marriages in Galápagos Islands and Provinces of Napo Pastaza and Santiago Zamora, but rates are computed on total population.

[37] For 1932-34.

30. Mariages et taux bruts de nuptialité (suite)

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du mariage.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[6] Pour 1922-24.

[7] Données relatives aux mariages civils seulement.

[15] Taux calculés d'après la population civile.

[16] Pour 1927-29.

[17] Pour 1921-24.

[18] Statistiques établies d'après les licences de mariage délivrées.

[19] Portée améliorée les dernières années.

[20] Y compris un grand nombre d'unions consensuelles régularisées à la suite de la promulgation d'une législation spéciale.

[21] 1927-1934: Pour les années terminées le 31 juillet. 1946-1950: Pour les années terminées le 30 juin.

[22] Pour 1930-31, 1933-34.

[23] Pour 1925-27.

[24] Pour 1932, 1934.

[25] Les données se rapportent aux mariages civils seulement. Les mariages religieux ne sont permis que si les conjoints peuvent établir qu'ils se sont d'abord mariés civilement.

[26] Pour Curaçao, Aruba et Bonaire seulement.

[27] Pour Curaçao seulement.

[28] Pour 1933-34.

[29] Non compris les indiens groupés en tribus et, également, la Zone du Canal qui figure séparément ci-dessus.

[30] Les données sont des estimations basées sur les mariages célébrés dans certaines régions, et sur les licences de mariage délivrées ou des renseignements du même ordre dans d'autres.

[31] Données pour année terminée le 30 juin.

[32] Ce taux n'a pas été calculé par le Bureau de statistique de l'Organisation des Nations Unies.

[33] L'enregistrement obligatoire est entré en vigueur en 1940.

[34] Depuis 1948, non compris les Amérindiens estimés à 18 140 en 1953.

[35] Les données se rapportent aux mariages inscrits sur les registres de l'église.

[36] Non compris les mariages célébrés dans les îles Galápagos et dans les provinces de Napo Pastaza et Santiago Zamora, bien que les taux aient été calculés d'après la population totale.

[37] Pour 1932-34.

30. Marriages and crude marriage rates (continued)

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[4] Registration not compulsory; believed to be complete for non-indigenous population only, which represents a relatively small proportion of the total.

[7] Data are civil marriages only.

[15] Rates computed on civilian population.

[17] For 1921-24.

[32] Not computed by the Statistical Office of the United Nations.

[38] Excluding Indian jungle population, estimated at 350 000.

[39] Excluding Indian and Negro population of the interior, estimated at 11 200 in 1920, 25 700 in 1946-1951 and 26 000 in 1952.

[40] For Paramaribo (capital) only, comprising about 41 per cent of total population.

[41] Excluding Indian jungle population, estimated at 56 700 in 1950.

[42] Kandyan marriages are completely registered. Registration of Moslem and General marriages is fairly complete.

[43] Beginning 1949, excluding foreigners. Data exclude marriages among tribal aborigines but rates are computed on population including them.

[44] Data for years ended 21 March.

[45] Excluding Bedouin population in the Negev.

[46] Prior to 1948, Jewish population of Palestine.

[47] Japanese nationals in Japan only. Prior to 1953, excluding Amami Islands, acquired from Ryukyu Islands between 1951 and 1953.

[48] Delay in registration is highly variable, but has tended to decrease in recent years.

[49] Registration estimated to be 90 per cent complete.

[50] For East Jordan only.

[51] Lebanese nationals only.

[52] Prior to 1953, including Amami Islands, which reverted to Japan between 1951 and 1953.

[53] Excluding nomad and semi-nomad population, estimated at 288 400 in 1945.

[54] Data are marriages in Provincial and District capitals only, but rates are computed on total population.

[55] Excludes data for Southern Dobruja.

[56] Prior to 1948, excluding territory ceded by Hungary in 1947.

[57] Data are marriages in which the bride was domiciled in Finland.

[58] Territory of 1937.

[59] Beginning 1951, West Berlin only.

[60] Prior to 1948, excluding Dodecanese.

[61] For 1926-29.

30. Mariages et taux bruts de nuptialité (suite)

[Voir note explicative à la page 727.]

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du mariage.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[4] L'enregistrement des mariages est facultatif; il n'est considéré comme complet que pour la population non indigène représentant une proportion relativement faible de la population totale.

[7] Données relatives aux mariages civils seulement.

[15] Taux calculés d'après la population civile.

[17] Pour 1921-24.

[32] Ce taux n'a pas été calculé par le Bureau de statistique de l'Organisation des Nations Unies.

[38] Non compris la population indienne de la jungle estimée à 350 00 personnes.

[38] Non compris la population indienne de la jungle estimée à 350 000 11 200 personnes en 1920, à 25 700 en 1946-1951 et à 26 000 en 1952.

[40] Pour Paramaribo seulement qui est la capitale et comprend environ 41 pour cent de la population totale du pays.

[41] Non compris la population indienne de la jungle estimée à 56 700 personnes en 1950.

[42] Les mariages kandyans sont intégralement enregistrés. L'enregistrement des mariages musulmans et civils est assez complet.

[43] A partir de 1949, non compris les étrangers. Les données ne comprennent pas les mariages parmi les tribus aborigènes, mais les taux ont été calculés d'après un chiffre de population les englobant.

[44] Données pour les années terminées le 21 mars.

[45] Non compris les bédouins du Negev.

[46] Avant 1948, population juive de Palestine.

[47] Nationaux japonais au Japon seulement. Avant 1953, non compris les îles Amami, détachées des îles Ryû-Kyû entre 1951 et 1953.

[48] Le retard dans l'enregistrement est très variable mais il a tendance à s'atténuer depuis quelques années.

[49] Enregistrement considéré comme complet dans la proportion de 90 pour cent.

[50] Pour la Jordanie orientale seulement.

[51] Nationaux libanais seulement.

[52] Avant 1953, y compris les îles Amami rendues au Japon entre 1951 et 1953.

[53] Non compris les nomades et semi-nomades estimés à 288 400 en 1945.

[54] Les données se rapportent aux mariages célébrés dans les chefs-lieux de provinces et de districts seulement mais les taux ont été calculés d'après la population totale.

[55] Non compris la Dobroudja méridionale.

[56] Avant 1948, non compris le territoire cédé par la Hongrie en 1947.

[57] Les données se rapportent aux mariages pour lesquels l'épouse est domiciliée en Finlande.

[58] Territoire de 1937.

[59] Depuis 1951, Berlin-Ouest exclusivement.

[60] Avant 1948, non compris le Dodécanèse.

[61] Pour 1926-29.

* Provisional.

† Data known to be by year of registration rather than by year of occurrence.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities in registration or incomplete coverage are coded "U".

[6] For 1922-24.

[7] Data are civil marriages only.

[8] For 1931-34.

[17] For 1921-24.

[31] Data for year ended 30 June.

[37] For 1932-34.

[58] Territory of 1937.

[62] Prior to 1948, including territory ceded to Czechoslovakia in 1947.

[63] 1921-1934: territory of 1938. Beginning 1946, present territory, including that part of the former Free Territory of Trieste incorporated in October 1954.

[64] Rates computed on population excluding non-Maltese armed forces stationed in the area.

[65] Prior to 1949, excluding villages of Elten and Tüddern. Data include marriages occurring outside country if registered in a Netherlands population register within one year.

[66] Data are marriages in which the groom was domiciled in Norway.

[67] Data less reliable before 1950.

[68] Includes data for Southern Dobruja, Bessarabia and Northern Bucovina.

[69] Prior to 1947, territory defined by Treaty of Versailles. January 1947-April 1949, excluding the commune of Kirrberg.

[70] 1946-1949: rates computed on population including armed forces outside country and merchant seamen at sea. 1950: rates computed on population including merchant seamen at sea.

[71] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954. Prior to 1947, excluding also territory ceded by Italy in 1947.

[72] Coverage for 1947 and 1948 incomplete owing to reorganization of Registrar's Service.

[73] Excluding full-blooded aborigines, estimated at 47 000 in 1944.

[74] Prior to 1947 and for 1953, data for years ended 31 March.

[75] Rates computed on population excluding military and administrative personnel and their dependents.

[76] Prior to 1953, data by year of registration.

[77] For Tongan population only.

[78] 1946-1950: data for years ended 31 March.

[79] For Samoan population only.

[80] For 1923-24.

* Provisoire.

† Données signalées comme relatives à l'année de l'enregistrement plutôt qu'à l'année du mariage.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[6] Pour 1922-24.

[7] Données relatives aux mariages civils seulement.

[8] Pour 1931-34. [17] Pour 1921-24.

[31] Données pour année terminée le 30 juin.

[37] Pour 1932-34.

[58] Territoire de 1937.

[62] Avant 1948, y compris le territoire cédé à la Tchécoslovaquie en 1947.

[63] 1921-1934: territoire de 1938. Depuis 1946, territoire actuel, y compris la partie de l'ancien territoire de Trieste attribuée à l'Italie en octobre 1954.

[64] Les taux ont été calculés d'après un chiffre de population ne comprenant pas les militaires non maltais en garnison dans la région.

[65] Avant 1949, non compris les villages d'Elten et de Tüddern. Les données comprennent les mariages célébrés hors du pays lorsqu'ils sont transcrits sur un registre d'état civil néerlandais dans un délai d'un an.

[66] Les données se rapportent aux mariages pour lesquels l'époux est domicilié en Norvège.

[67] Données moins complètes avant 1950.

[68] Y compris la Dobroudja méridionale, la Bessarabie et la Bukovine du Nord.

[69] Avant 1947, territoire du Traité de Versailles; janvier 1947-avril 1949, non compris la commune de Kirrberg.

[70] 1946-1949: taux calculés d'après un chiffre de population comprenant les forces armées hors du pays et les équipages de la marine marchande en mer. 1950: taux calculés d'après un chiffre de population comprenant les équipages de la marine marchande en mer.

[71] Non compris Koper et Buje qui constituent la partie de l'ancien territoire libre de Trieste attribuée à la Yougoslavie en octobre 1954. Avant 1947, non compris également le territoire cédé par l'Italie en 1947.

[72] Données incomplètes pour 1947 et 1948 à la suite de la réorganisation des services de l'état civil.

[73] Non compris les purs aborigènes estimés à 47 000 en 1940.

[74] Avant 1947 et pour 1953, données pour les années terminées le 31 mars.

[75] Taux calculés d'après un chiffre de population ne comprenant pas les militaires et fonctionnaires ainsi que les membres de leur famille les accompagnant.

[76] Avant 1953, les données se rapportent à l'année de l'enregistrement.

[77] Pour les habitants de Tonga seulement.

[78] 1946-1950: Données pour les années terminées le 31 mars.

[79] Samoans exclusivement.

[80] Pour 1923-24.

31. Divorces and crude divorce rates: 1946 – 1954

[Rates are the number of final decrees per 1 000 population. For discussion, see page 42.]

* Provisional.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities or incomplete coverage are coded "U".

[2] "Civilized" population only.

[3] European, Indian and Coloured, together comprising about one per cent of total population.

[4] Data include revocable divorces and annulments among Moslem population which constitute about 95 per cent of total.

[5] "Non-Moroccan" population.

[6] Data are divorces among Moslem population only, but rates are computed on total population.

[7] Including Moroccan Jewish population.

[8] Data include divorces, annulments, legal separations and revocable divorces among Christian and Moslem communities, but rates are computed on total population.

[9] Data include annulments.

[10] Statistics based on petitions for divorce entered in courts.

[11] New divorce law introduced in 1948.

[12] Rates computed on civilian population.

[13] Excluding Yukon and Northwest Territories and, prior to 1950, Newfoundland, which became the tenth province 1 April 1949.

31. Divorces, nombres et taux bruts: 1946 – 1954

[Les taux représentent le nombre de divorces prononcés pour 1 000 habitants. Voir explications à la page 93.]

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[2] Population "civilisée" seulement.

[3] Européens, Indiens et métis représentant ensemble 1 pour cent environ de la population totale.

[4] Les données comprennent les divorces révocables et les annulations parmi la population musulmane estimée à environ 95 pour cent du total.

[5] Population "non marocaine".

[6] Les données se rapportent aux divorces parmi la population musulmane seulement, mais les taux ont été calculés d'après la population totale.

[7] Y compris les marocains israélites.

[8] Les données comprennent les divorces, annulations, séparations légales et divorces révocables parmi les chrétiens et les musulmans, mais les taux ont été calculés d'après la population totale.

[9] Les données comprennent les annulations.

[10] Statistiques établies d'après les instances en divorce devant les tribunaux.

[11] Une nouvelle loi régissant le divorce est entrée en vigueur en 1948.

[12] Taux calculés d'après la population civile.

[13] Non compris le Yukon, les Territoires du Nord-Ouest et, avant 1950, Terre-Nueve qui constitue la 10ème province du dominion depuis le 1er avril 1949.

31. Divorces and crude divorce rates (continued)

* Provisional.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities or incomplete coverage are coded "U".

[9] Data include annulments.

[14] 1946-1949: Excluding Virgin Islands [UK].

[15] For Curaçao, Aruba and Bonaire only.

[16] Excluding tribal Indian population, and also data for Canal Zone shown separately above.

[17] Data are estimates based on divorces and annulments reported by a varying number of states.

[18] Data include annulments. High rates attributable to divorces of non-permanent residents.

[19] Excluding Amerindians, estimated at 18 140 in 1953.

[20] Data exclude divorces in the Galápagos Islands and Provinces of Napo Pastaza and Santiago Zamora, but rates are computed on total population.

[21] Excluding Indian jungle population, estimated at 56 700 in 1950.

[22] Colony only.

[23] Beginning 1949, excluding foreigners. Data exclude divorces among tribal aborigines, but rates are computed on population including them.

[24] Prior to 1954, years ended 21 March.

[25] Excluding Bedouin population in the Negev.

[26] Prior to 1948, Jewish population of Palestine.

[27] Japanese nationals in Japan only. Prior to 1953, excluding Amami Islands acquired from Ryukyu Islands between 1951 and 1953.

[28] Registration estimated to be 90 per cent complete.

[29] Settled Moslem population of territory formerly under British mandate. For divorces and divorce rates among Jewish population, see Israel above.

[30] Prior to 1953, including Amami Islands, which reverted to Japan between 1951 and 1953.

[31] Excluding nomad and semi-nomad population, estimated at 288 400 in 1945.

31. Divorces, nombres et taux bruts (suite)

[Voir note explicative à la page 735.]

* Provisoire.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[9] Les données comprennent les annulations.

[14] 1946-1949: Non compris les îles Vierges [R-U].

[15] Pour Curaçao, Aruba et Bonaire seulement.

[16] Non compris les indiens groupés en tribus et, également, la Zone du Canal qui figure séparément ci-dessus.

[17] Les données reposent sur une estimation des divorces et sur les annulations signalées dans un nombre variable d'états.

[18] Les données comprennent les annulations signalées. Les taux élevés sont attribuables aux divorces entre résidents non permanents.

[19] Non compris les Amérindiens estimés à 18 140 en 1953.

[20] Les données ne comprennent pas les divorces dans les îles Galápagos et dans les provinces de Napo Pastaza et Santiago Zamora, mais les taux ont été calculés d'après la population totale.

[21] Non compris la population indienne de la jungle estimée à 56 700 personnes en 1950.

[22] Colonie seulement.

[23] A partir de 1949, non compris les étrangers. Les données ne comprennent pas les divorces parmi les tribus aborigènes, mais les taux ont été calculés d'après un chiffre de population les englobant.

[24] Avant 1954, années terminées le 21 mars.

[25] Non compris les bédouins du Negev.

[26] Avant 1948, population juive de Palestine.

[27] Nationaux japonais au Japon seulement. Avant 1953, non compris les îles Amami détachées des îles Ryû-Kyû entre 1951 et 1953.

[28] Enregistrement considéré comme complet dans la proportion de 90 pour cent.

[29] Population musulmane du territoire auparavant sous mandat britannique, à l'exclusion des nomades. Pour les divorces et les taux correspondants parmi la population juive, voir Israël ci-dessus.

[30] Avant 1953, y compris les îles Amami rendues au Japon entre 1951 et 1953.

[31] Non compris les nomades et semi-nomades estimés à 288 400 en 1945.

31. Divorces and crude divorce rates (continued)

[See headnote on page 734.]

* Provisional.

[1] Data stated to be complete or virtually complete are coded "C"; those stated to be affected by irregularities or incomplete coverage are coded "U".

[9] Data include annulments.

[10] Statistics based on petitions for divorce entered in courts.

[12] Rates computed on civilian population.

[32] Prior to 1948, excluding territory ceded by Hungary in 1947.

[33] Beginning 1949, West Berlin only.

[34] Prior to 1949, excluding villages of Elten and Tüddern.

[35] For 1946, territory defined by Treaty of Versailles. January 1947-April 1949, excluding the commune of Kirrberg.

[36] Rates computed on population including armed forces outside country and merchant seamen at sea.

[37] Prior to 1950, rates computed on population including armed forces outside country and merchant seamen at sea. Prior to 1953, statistics based on petitions for divorce.

[38] Excluding full-blooded aborigines, estimated at 47 000 in 1944.

[39] For 1951-1954 data for years ended 31 March.

[40] Rates computed on population excluding military and administrative personnel and their dependents.

[41] Prior to 1949, excluding Maori population.

[42] For years ended 30 June.

[43] For Tongan population only.

[44] Prior to 1951 data for years ended 31 March.

[45] For Samoan population only.

31. Divorces, nombres et taux bruts (suite)

* Provisoire.

[1] La lettre "C" figure en regard des données considérées comme complètes ou pratiquement complètes; la lettre "U" figure en regard des données considérées comme incomplètes ou issues d'enregistrements irréguliers.

[9] Les données comprennent les annulations.

[10] Statistiques établies d'après les instances en divorce devant les tribunaux.

[12] Taux calculés d'après la population civile.

[32] Avant 1948, non compris le territoire cédé par la Hongrie en 1947.

[33] Depuis 1949, Berlin-Ouest seulement.

[34] Avant 1949, non compris les villages d'Elten et de Tüddern.

[35] Pour 1946, territoire du Traité de Versailles. Janvier 1947-avril 1949, non compris la commune de Kirrberg.

[36] Taux calculés d'après un chiffre de population comprenant les forces armées hors du pays et les équipages de la marine marchande en mer.

[37] Avant 1950, taux calculés d'après un chiffre de population comprenant les forces armées hors du pays et les équipages de la marine marchande en mer. Avant 1953, statistiques établies d'après les instances en divorce.

[38] Non compris les purs aborigènes estimés à 47 000 en 1944.

[39] 1951-1954: données pour les années terminées le 31 mars.

[40] Taux calculés d'après un chiffre de population ne comprenant pas les militaires et fonctionnaires ainsi que les membres de leur famille les accompagnant.

[41] Avant 1949, non compris les Maoris.

[42] Années terminées le 30 juin.

[43] Habitants de Tonga seulement.

[44] Avant 1951, données pour les années terminées le 31 mars.

[45] Samoans seulement.

32. Expectation of life at specified ages for each sex : latest available data

[Average number of years of life remaining to persons surviving to exact age specified, if subject to mortality conditions of period indicated. For discussion, see page 44.]

[18] Non compris les purs aborigènes estimés à 47 000 en 1944.

[19] Russie d'Europe seulement; les données se rapportent probablement au territoire de l'époque.

BIBLIOGRAPHY

BIBLIOGRAPHIE

BIBLIOGRAPHY

This bibliography presents citations to recent official publications containing census and other demographic statistics for each area of the world. It is a continuation of the bibliographies which appeared in the *Demographic Yearbook 1953* and the *Demographic Yearbook 1954*.

Only new titles which did not appear in the two previous bibliographies are included here, except for certain serial publications which during the intervening period have undergone a significant change as regards nature of content, title, issuing agency and so forth, which have resumed publication after an interruption or which have just come to the attention of the compiler. Therefore certain countries for which new data are available are not represented, or may show only one or two new titles because their major new statistical output has been published in regular periodical publications which were already listed in the previous bibliographies. In the case of censuses of population, only new volumes are included; e.g., volume 1 of the 1951 census of the Republic of Ireland was included in the 1953 bibliography, and volume 2, part 1, in the 1954 bibliography, and in the present bibliography those volumes which have appeared since the preparation of the 1954 bibliography, i.e., volume 2, part 2, and volume 3, part 1. This means that the present bibliography must be used in conjunction with the previous ones if a more complete listing of recent demographic publications is desired.

Complete bibliographic citations are given except in regard to census volumes for administrative subdivisions of a country, in which case year of publication and number of pages are omitted. Titles in languages other than English or French are accompanied by English translations.

This bibliography was prepared for the United Nations by the United States Library of Congress.

BIBLIOGRAPHIE

La présente bibliographie donne la liste des publications officielles récentes relatives aux recensements et autres statistiques démographiques de chaque pays et territoire du monde. Elle constitue une suite de celles qui se trouvaient dans les éditions 1953 et 1954 de l'*Annuaire démographique*. Seuls les ouvrages nouveaux qui n'ont pas été mentionnés dans ces deux dernières bibliographies le sont ici, à l'exception toutefois de certaines publications périodiques ayant subi entre temps des modifications importantes en ce qui concerne leur titre, la nature des informations fournies, leur source etc., qui ont repris leur publication après l'avoir interrompue et de celles qui viennent seulement d'être signalées à l'attention du compilateur. Par suite, certains pays pour lesquels de nouvelles données sont disponibles ne figurent pas dans cette bibliographie ou n'y sont représentés que par un ou deux titres à peine, leur principale production statistique récente ayant été publiée dans des périodiques déjà cités dans les bibliographies antérieures.

Dans le cas des recensements de population, il n'est fait mention que des volumes récemment parus; c'est ainsi que, comme le volume 1 du recensement de la République d'Irlande effectué en 1951 a été cité dans la bibliographie de l'édition 1953 de l'*Annuaire*, et que le volume 2, première partie, l'a été dans celle de 1954, on ne trouvera dans la présente bibliographie que les numéros des volumes parus depuis, c'est-à-dire, volume 2, deuxième partie et volume 3, première partie. En conséquence, la présente bibliographie et les précédentes devront être utilisées de concert si l'on désire avoir une vue d'ensemble des dernières publications démographiques.

Les références bibliographiques des publications sont données *in extenso* à l'exception des volumes relatifs aux divisions administratives du pays, pour lesquels l'année de publication et le nombre de pages ne sont pas indiqués. Les titres d'ouvrages dans une langue autre que l'anglais on le français sont accompagnés d'une traduction en anglais.

Cette bibliographie a été établie pour l'Organisation des Nations Unies par la bibliothèque du Congrès des Etats-Unis.

CUMULATIVE LIST OF YEARBOOK TABLES

LISTE DES TABLEAUX PARUS DANS L'ANNUAIRE

Cumulative list of tables: subjects and time periods covered in each issue of the *Demographic Yearbook*

Subject — Sujet	Time period: 1948 issue Edition de 1948	Time period: 1949/50 issue Edition de 1949/50
POPULATION		
AREA AND TOTAL POPULATION — SUPERFICIE ET POPULATION TOTALE		
Population by sex,[1] with area and density for each part of the world — Population selon le sexes,[1] avec indication de la superficie et de la densité de chaque partie du monde	Latest census and estimates for 1937, 1946, 1947 — Dernier recensement et estimations pour 1937, 1946, 1947	Latest census and estimates for 1937, 1947 – 1949 — Dernier recensement et estimations pour 1937, 1947 – 1949
Estimated population, area and density of the world by continents and regions — Estimations de la population, superficie et densité du monde par continents et régions géographiques principales	—	—
Area, enumerated population and intercensal rates of increase — Superficie, population denombrée et taux d'accroissement entre recensements consécutifs	1900 – 1948	1900 – 1950
Estimates of total population — Estimations de la population totale	1932 – 1947	1932 – 1949
GEOGRAPHIC DISTRIBUTION — REPARTITION GEOGRAPHIQUE		
Population by major civil divisions — Population par principales divisions administratives	—	—
Population, urban and rural, by sex — Population urbaine et population rurale selon le sexe	Latest census — Dernier recensement	—
Population by size of locality and sex — Population selon l'importance des localités et le sexe	Latest census — Dernier recensement	—
Population of capital city and cities of 100 000 or more inhabitants — Population des capitales et des villes de 100 000 habitants au moins	—	—
SIZE OF HOUSEHOLD — DIMENSION DES MENAGES		
Population by size of household — Population selon la dimension des ménages	—	—
AGE AND SEX — AGE ET SEXE		
Population by single years of age and sex — Population par année d'âge et par sexe	—	—
Population by 5-year age groups and sex [2] — Population par groupes d'âge quinquennaux et par sexe [2]	Latest census; 1945 and latest estimate — Dernier recensement; 1945, et dernière estimation	Latest census; 1945 and latest estimate — Dernier recensement; 1945, et dernière estimation
MARITAL STATUS — ETAT MATRIMONIAL		
Population by marital status, age and sex — Population selon l'état matrimonial, l'âge et le sexe	Latest census — Dernier recensement	Recent censuses — Recensements récents
Percentage distribution by marital status, age and sex — Pourcentage de répartition de la population selon l'état matrimonial, l'âge et le sexe	Latest census — Dernier recensement	—
Percent single by age and sex — Pourcentage des célibataires par âge et sexe	—	Recent censuses — Recensements récents
Married population by age and sex [number and percent] — Population mariée selon l'âge et le sexe [nombres absolus et pourcentages]	—	—

[1] Sex distribution shown only in 1955 *Yearbook*.

[2] Percentage distribution included in 1948, 1949/50, 1951 and 1952 issues.

PUBLICATIONS OF THE WORLD HEALTH ORGANIZATION

Annual Epidemiological And Vital Statistics 1953*

This Annual is the sixth of the series appearing under the auspices of the World Health Organization. It comprises in a single volume the two reports which in years past were published separately, i.e., Part I devoted to vital statistics and causes of death and Part II dealing with cases of and deaths from notifiable diseases. It contains the general demographic information essential for the understanding of the data on specific mortality and on morbidity (population, births, and general, infant, and neonatal mortality). The causes of death are presented for the year 1953 in detail according to the Abridged List, by sex and age and covering about 30 countries. Special tables give details of infant mortality from certain causes according to sex and age, of tuberculosis mortality, and mortality from malignant neoplasms according to site by sex and age. Mortality rates by sex are shown in respect of certain diseases and by age in respect of others. The second part gives statistics of notifications of cases and deaths from 36 communicable diseases with details of seasonal distribution, that is, by month or by periods of 4 weeks. A list of the diseases which are compulsorily notifiable in the various countries completes the volume.

Prepared by the Division of Epidemiological and Health Statistical Services

WORLD HEALTH ORGANIZATION

Geneva

* Publication expected in March 1956

PUBLICATIONS DE L'ORGANISATION MONDIALE DE LA SANTE

Statistiques Epidémiologiques et Démographiques Annuelles 1953*

Cet annuaire est le sixième de la série, paru sous les auspices de l'Organisation Mondiale de la Santé; il réunit en un seul volume les deux rapports publiés séparément dans le passé, soit: la Partie I consacrée au mouvement de la population et aux causes de décès et la Partie II, consacrée aux cas et décès de maladie à déclaration obligatoire. Il contient les informations essentielles de démographie générale nécessaires à la compréhension des données sur la mortalité spécifique et la morbidité (population, naissances, mortalité générale, infantile et néonatale). Les causes de décès sont présentées, pour l'année 1953, dans leur détail selon les Nomenclatures abrégées, par sexe et groupes d'âge, pour trente pays environ. Des tableaux spéciaux apportent des détails sur la mortalité infantile, par certaines causes, d'après le sexe et l'âge, sur la mortalité due à la tuberculose et aux tumeurs malignes d'après la localisation, et également selon le sexe et l'âge. On y trouve également des taux de mortalité par sexe pour certaines maladies. La seconde partie reproduit les statistiques des cas déclarés et des décès pour 36 maladies infectieuses, détaillés d'après leur distribution saisonnière, c'est-à-dire par mois ou par période de 4 semaines. Une liste des maladies à déclaration obligatoire dans les divers pays termine cet important rapport.

Préparé par la Division des Services d'Epidémiologie et de Statistiques Sanitaires

ORGANISATION MONDIALE DE LA SANTE

Genève

* A paraître en mars 1956.

UNITED NATIONS NATIONS UNIES

STATISTICAL YEARBOOK 1955

Seventh issue of a comprehensive collection of international statistics presented in 183 tables, most of which cover a twenty-year period ending 1954 or mid-1955. The *Yearbook* contains, *inter alia*, statistics relating to: economically active population; structure of mining and of manufacturing; textile and transport equipment; production of over 100 commodities and price series for over 50 commodities; consumption of food, energy and raw materials; railways, shipping, civil aviation and tourist travel; postal and telegraph services, telephones; external trade of virtually all trading countries; national budget accounts, showing expenditure for defence, social services, etc.; social security; housing; medical personnel; illiteracy; educational institutions; newsprint and newspapers, books, films, cinemas and radio and television broadcasting.

Chapter headings: population; manpower; agriculture; forestry; fishing; industrial production; mining, quarrying; manufacturing; construction; electricity, gas; consumption; transport; communications; internal trade; external trade; balance of payments; wages and prices; national income; finance; public finance; social statistics; education, culture. Also appendices showing conversion factors and the principal statistics published by international organizations, and alphabetical subject and country indexes.

Prepared by the Statistical Office of the United Nations

(U.N. Publications Sales No. 1955 • XVII • 10)

9 x 11½ ins., 644 pages. Clothbound $7.50; paperbound $6.00

ANNUAIRE STATISTIQUE 1955

Septième année d'un recueil volumineux de statistiques internationales, présentées en 183 tableaux dont la plupart couvrent une période de 20 ans se terminant à la fin de 1954 ou au milieu de 1955. L'*Annuaire* contient notamment des statistiques concernant: la population active; les données fondamentales des industries extractives et manufacturières; l'outillage des industries textiles et des transports; la production de plus de 100 articles et les prix *de* plus de 50 marchandises; la consommation de denrées alimentaires, d'énergie et matières premières; les chemins de fer, les transports maritimes, l'aviation civile et le tourisme; les services des postes, du télégraphe et du téléphone; le commerce extérieur de presque tous les pays; les comptes budgétaires avec indication des dépenses nationales pour la défense, les services sociaux, etc.; la sécurité sociale; l'habitation; le personnel médical; l'analphabétisme; les établissements d'enseignement; le papier journal et les journaux, les livres, les films, les cinémas, la radiodiffusion et la télévision.

Chapitres: population; main-d'oeuvre; agriculture; forêts; pêche; production industrielle; industries extractives; industries manufacturières; construction; électricité, gaz; consommation; transports; communications; commerce intérieur; commerce extérieur; balance des paiements; salaires et prix; revenu national; finances; finances publiques; statistiques sociales; instruction, culture. En outre, annexes indiquant des facteurs de conversion et les principales statistiques publiées par les organisations internationales, et des index alphabétiques des sujets et des pays.
